To the man who is a born lover of the woods and lakes, the rod and gun and all that tends to draw one away from the hum and hurry of civilization into the quiet and beauty of nature, and whose only idea of the primeval is the scattering of woods about a large city, the first trip into Maine is a much anticipated event. The summer of '95 brought the realization of this dream. D. and I had arranged to spend ten days together, and left Boston one day during the first part of August, with Norcross for our destination. Here we were met by our guide, and after a night spent mostly in dreams of the morrow we made a start down North Twin and Pemadumcook lakes, men and outfit all in one big canoe. Here we were at last right in the midst of those scenes and of that life of which we had dreamt so long, and of which we expected so much; and to say we were pleased with our surroundings is putting it mildly. Will that feeling ever be satisfactorily explained which absorbs a man as each hunting and fishing season comes round, and again, when he is fortunate enough to get away, when he nears the scene of his favorite camp or the lake or some spot made familiar and dear by previous association? Already you are a different man from him who left the city a few hours before, and the complete change comes when you find yourself comfortably settled amid those familiar sounds and sights, and all that goes to make up the grandeur of the forest and the fascination of camp life.

On this trip we covered a good deal of ground around Pemadumcook and the Katepskanegan lakes, spending the most time on the third Katepskanegan. We caught an abundance of fish, had a fine time generally, and more than all were impressed with the great game resources of the country.

We planned for a hunt at the first opportunity. This came in the fall of '96, but unfortunately I was obliged to take it alone. However, I did not hesitate, knowing my guide and being sure of good companionship, that great necessity for enjoyable camp life, and left Boston Nov. 9 again for Norcross. I never see Norcross now but what I think of the young man who went up on the train also bound for Norcross, and evidently on his first trip. In talking over his plans he said he intended to leave his valuables in the care of the Norcross Safe Deposit and Trust Company during his stay in the woods. Imagine his surprise on reaching that place to find all business, banking, post-office, and merchandise carried on in one small apartment, which was still large enough to hold nearly all of the not over numerous population of Norcross.

My first shot at a deer came the next afternoon in the woods back of Norcross. A glorious miss, of course, but not very disappointing on that account, for success would have spoilt the chance for something bigger later. We started for camp on Nahmakanta Lake next morning, but owing to a late start did not arrive until long after dark. A hot supper, which we found waiting for us, and a good night's sleep, such sleep as you only get in the woods, banished all remembrance of a hard day's travel, and put us in readiness for the morrow's hunt. The first thing in the morning I went out to get a look at the camp and its surroundings, and found that we were beautifully situated on high land, about midway up the lake, with a fine view of wooded hills in either direction, and with Sundabund Mountain directly across.

Our hunt began that day with the prime object a moose, and for four days we spent most of the time in following up fresh signs, which were plentiful enough, but without coming in sight of the game.

Feeling that time was getting short, and not wishing to postpone the deer hunting until the last moment, the guide packed provisions enough for three days, and with the necessary utensils we started early the next morning to the head of Nahmakanta, thence across to Pollywog and Wadleigh, stopping there to hunt on Wadleigh Mountain, and intending to push through to Upper Musquash in the afternoon.

I had received already a very distinct impression of the ability of deer to vanish with a snort and a show of flag on the slightest provocation, and had decided that it wasn't the easiest thing in the world to bring one in line of your rifle. But this day proved a banner one for me, as the occasion of my first deer. We were walking along the edge of a high bank, which rose almost perpendicularly from the brook below, about 100ft., and separated from the edge by a few feet of small growth, when the guide beckoned silence and walked out on the edge of the bank, listening intently. I followed, and with a "Hush, get ready, I hear a deer feeding; he will smell us and run," I crouched as low as possible and held my breath. I had hardly stooped before with a crash and a snort the deer had left the clump of bushes at the foot of the embankment and dashed up the brook as if a thousand devils were chasing. I brought my rifle up and fired almost in the same motion. I must say I was surprised to see him plunge out into the brook and lie perfectly still. In my excitement I shouted, "He's down, he's down," and started for the foot of the bank, landing there in a heap, having rolled most of the way. Looking up, I saw the guide, who was filling the air with shouts of laughter, and more slowly following my hurried descent. The deer was stone dead, with a bullet through the neck, and it proved to be a spike buck.

We pushed through to Upper Musquash that night, having to walk all the way from Wadleigh, finding the upper water of Wadleigh frozen tight, and camped in the office of an abandoned lumber camp. The next day, in the swamp back of camp, I repeated my good luck of the day before, and had the satisfaction of bringing down, by what I call another chance shot, a large buck with very heavy and finely spreading antlers, which I am proud to show to my friends as it hangs in my home to-day. We went back to the main camp the next day, thinking it a more comfortable place to pass the two or three remaining days of our stay.

Barring the experience in getting home, of being stopped by ice in Pemadumcook, and having to leave everything on the shore under the canoes, and walk through the snow-covered woods forty miles to Schoodic Station, with the attendant discomfort of laying out nights, lack of food and the ever present novelty of doing the tight rope act on a slippery tree over icy brooks, our trip was a thoroughly enjoyable one, and filled with incidents and sights both new and novel to me, and which I have not here the space to mention.

Unable to get away during 1897, this spring I could wait no longer, and June 1 found me again among the familiar surroundings of Katepskanegan lakes and Mount Katahdin. The man who could ask for better fishing than we had would certainly be hard to please. We caught togue or lakers until our arms were tired handling the rods, keeping only enough for our table, the requirement for which, by the way, was rather hard to gauge for the first few days, for there is not the slightest similarity between the appetite of one at home doing his daily office work and that of the same man off in the woods, tramping, fishing, hunting or even loafing, with the surroundings of camp life.

Brook trout were rising nicely to the fly, and we caught all we wanted of from ¼ to 2lbs. We saw game in abundance, and the most exciting incident of the trip was the experience attending the sight of my first moose. We had gone back to a little pond for trout, and as we neared it the guide pointed and said: "There's our moose," and there he was, feeding on the opposite shore of the pond, standing up to his knees in water, and every few minutes bringing up his head and looking squarely in our direction, but all unconscious of our presence. Hastily climbing onto the raft, the only means of conveyance on the pond, and a very convenient sort of craft to throw a fly from, I sat down in front and the guide pushed out directly toward the moose, which was about 150yds. away. Every time he put his head under water the guide would push or paddle as hard as he could, and when he brought his head up and apparently looked right at us we crouched as low as possible. In this way we got within 20ft. of him without his scenting us, but the more alert deer, four in number, caught the scent and decamped before we were half-way across the pond. My position on front of the raft was getting warm, and my only weapon was a pocket camera, which I kept snapping all the way across, expecting every click of the shutter would tell the story of our presence. Down went the head again, and another shove with the pole sent us within 10ft.. He brought up his head, shook the water from his great neck and shoulders, and stood for a second looking us square in the eye, a picture of surprise, but long enough for me to take a final snap. As I was preparing to slide over the edge of the raft should he wish to make closer inspection, he turned and with a snort ran for the woods; and how the mud and water did fly. Under the shelter of the trees he stopped, looked us over for a minute, and then slowly trotted back out of sight.

I must acknowledge to a slight weakness in the knees as I tried to rise, and the guide was simply streaming with perspiration. It was a clever piece of work on his part, and he told me of having done the same thing the year before in a canoe, which, of course, had lessened the difficulty considerably. The photographs were unfortunately spoilt, owing, no doubt, to bad management on the part of the photographer.

We made a short trip to Nahmakanta, Wadleigh and the Musquash ponds, and found lots of trout, and black flies and mosquitoes in swarms; so thick in fact that we stayed but one night, preferring the comfort of a good tight camp to the attraction of better trout fishing.

The whole trip was, like the others, one of thorough enjoyment. It could not have been otherwise in company with my guide, D. W. Hopkins, of Milo, who seems to take in at a glance the requirements of his guest for a good time, is an A1 canoeman, and thoroughly capable in every way. He controls a fine line of camps in a wonderfully fine game country, and I can heartily recommend him and his country to any one in search of either game, fish or rest and recuperation, and a general good time.

Such trips are to me the most delightful mode of enjoyment, and as far as I can learn there seems to be but one verdict from those who from time to time spend a few days or weeks in this way. All seem agreed that it is the greatest antidote for tired minds and bodies, and the greatest boon possible toward a happy and prosperous balance of the year.

How I Spent Thanksgiving.

A Story of Wheeling and Quail Shooting.

The morning promised a faultless winter day. The brightest of sunshine, a crisp air full af bracing frost, and without wind. I breathed and felt strong of limb and light of heart.

What a day for flying over the smooth roads on a wheel; what a day for quail. I felt like wheeling, and felt it in my bones that I could make a dozen straight shots on flying quail.

There was a little business to see after at a village eight miles away, and there was good quail ground along the road; so the wheel was brought out, touched up a little here and there, and its beauty and strength and lightness admired for the hundredth time. It has carried me more than a thousand miles, over every sort of road, from the very best to the worst, and never once have I even had to dismount on account of any failure of the wheel to be in perfect order.

Next, the gun case was brought out and strapped to the wheel. Then the gun was taken apart and stock and barrels were shoved into their compartments. Then the old shooting coat was put on. Ah! that old coat. It was a beauty once, but now it is ragged on the shoulders, and its game pockets have been renewed more than once. It is dirty, discolored, greasy and smells of the smoke of camp-fires. It is a tough looking old coat, but the pockets have held grouse, ducks and squirrels in Wisconsin hundreds of quail in Kansas, Iowa, Arkansas, Tennessee and Texas. Those pockets have more than once been filled with ruffed and sharp-tailed grouse in the Black Hills too, and wild turkeys have been slung over the shoulder in Florida, while the pockets were bulged with two dozen quail, and the guide was dragging a deer to camp. Down in the Indian Territory those pockets have more than once been filled to overflowing with chickens and snipe. A new coat would look lots nicer, but the old one is good enough for me, and there is no shooting coat on earth to-day that I would take in exchange for it.

Now, by the time these preparations are made, the dog has got uneasy. He does not know yet whether he is to be in it or not. I have another dog now, a borrowed one, half-pointer and two-thirds fool. I never could get along with a pointer anyway, and this being one whose owner wanted me to borrow, it goes without saying that he is not a very good one. Old Joe is still with me, but he is older than the coat, and is now too fat and decrepid to go afield, but he cries and begs to go, and sometimes I take him out a little while, but on no trips of any length.

Now the wheel is mounted and for a half-mile of smooth and gently sloping road the dog has to keep in a sharp gallop, or be left. Then comes a hill 200yds. long, and it takes pushing to get up, but the wheel goes over the top of the hill at a good speed, and down the other side faster, ever faster, till it seems to spurn distance, and rolls a long way along the smooth level at the foot of the hill. Then comes half a mile of all downhill to the creek. Then up hill all the way for a mile. Not steep, but uphill all the time. Just a few minutes, seven or eight perhaps, of hard work that gets me in a glow of comfortable warmth, for the morning is sharp; next a mile of level, and a flying coast down a long slope to the next creek; up the slope on its further side, a burst of terrific speed down the steep slope to the next creek, over the bridge and half-way up the opposite hill before any work is needed. Then comes the last stretch of the strip, three miles of smooth, level pike, and I set out to make things hum, and reach the village in a good sweat in spite of the sharp weather, but not a bit tired. Eight miles in forty minutes, and every minute a pleasure.

After a good dinner (we eat dinner at noon out here in "Indianny") with my old and tried friend, Dr. Clark, I started homeward. A mile this side of the village, a few days before, I had seen a nice bunch of quail crossing the road. Here I stopped and "unlimbered," leaning the wheel against the fence (one doesn't need to hide the wheel in this section), and got into the cornfield and went down a weedy ditch. It was a dandy looking place for quail, but no quail were found. We went over the entire field, and it seemed that there could be no quail in it. We hunted several adjoining fields that looked good, and I knew there must be quail somewhere about, for there was a little snow in shaded places, and there were quail tracks there.

At last, after over an hour of persistent hunting, the dog pointed at a thick clump of wild rose bushes, and I could hear quail "chittering" in there. If I went close enough to flush them, no shot could be had, for the bushes were too high and thick, so I got a club and threw it in, and out burst about a dozen of big, plump fellows. My! How they did roar. One was bagged, and I marked the most of them along the weedy ditch in the first field we had hunted. We went there and hunted that ditch and the adjoining ground clear to the other side of the field and did not raise a feather. At last the dog flushed a rabbit and went ki-yiing after it, running right through a bunch of quail, which flew toward where we had found the first bevy. I went after them, and when nearly to the edge of the field all at once the air was full of quail. I tried to make a double, but was so rattled I don't know whether the first one was killed or not, but the second came down all right. By the time the gun was loaded the dog was on hand and flushed another one, which tumbled in fine style. After getting the dead, the dog ran into some weeds 40yds. ahead and flushed one, which I took a long shot at, and hit so hard it flew but a few yards, coming down in very thick, high grass. As I started to get it another rose and was shot, and at the crack of the gun another, which was also killed. An instant later another one flew and got safely away. After hunting a while for the wounded one in the grass, and not finding it, we went for the bunch the dog had flushed while chasing the rabbit.

The cover was very dense, tall weeds, bushes and small trees. We thrashed round in it for some time without results, till at last one bird flew out of a tree, and I considered it a very lucky shot that killed it, for there is no harder shot than at a quail as it flies from a tree. I got out of the thick cover and walked along the edge in the weedy stubble, when up went one, which was killed, and almost immediately up came another, and I had good luck with too. The dog came out and hunted in the stubble, flushing one, which got away. A moment later he pointed, and this bird fell with a broken wing and ran into a big pile of logs and brush, so we did not get it. Then he went into the thick cover and pointed, and I killed it.

We hunted for more, but failed to find another one. Then I concluded to sit down and count shots and birds. Nine quail bagged, and two more hit, at twelve shots. Now don't understand that this is told as an average performance, for just a few days before I had shot at ten quail and bagged five, shooting both barrels at some of them. This just happened to be one of my shooting days. I felt in perfect health and took the very keenest interest in the sport. Not a shot was fired that I did not do my utmost to make a clean kill. The day was so bright that the birds fairly glistened when in the air, and there was no wind. I have shot at more than 10,000 quail. Why shouldn't a man shoot fairly well with so much practice?

As it was now getting well along in the afternoon, I went back to the wheel and made it hum for three miles more of the way toward home. I don't know why, but I do know it is true that when any legs are weary with walking it rests them more quickly and better to ride a wheel for a few miles than it does to sit down and keep still.

I stopped at a little creek whose banks were fringed with weeds and willow bushes; a stubble on one side and a big cornfield on the other. One of the neighbor boys told me he had seen a "famous lot of quail" there a few evenings before. The boys are mighty good to me in that way; I don't have to ask them; they stop me on the road or in the post-office to tell about it. I went along the fringe of weeds and high bushes at one edge of the cornfield, and the dog ran ahead and went into the weeds. Presently I heard the roar of flushing quail and saw a lot of them flying straight toward me. They passed over my head less than 15ft. high. I turned and sent two loads after them after they had passed, but noted that every one of them went on and came down in the strip of weeds and bushes. Now I wished for a partner; for the strip of cover was narrow, and they would take to the open on the opposite side from me. The dog floundered through the thick weeds and tangled brush and the quail went out on the other side, most of them getting up together, flying clear to the end of the cover, and several of them swung to the left and dropped into the stubble field. A few steps further and two came out of the cover on my side of it. I tried to make a double and scored one. Then we went after the ones down in the stubble. I came near stepping on a couple, and again tried for a double, winging both of them. I found one, and after a good deal of hunting the dog found the other one, some distance from where it fell. After a lot more tramping another bird was flushed and killed. Then the dog flushed one without having smelled it at all. The first shot made it flinch, and the second set it to corkscrewing across the field with the dog in hot chase after it, in spite of all the commands to stop. Two hundred yards away it fell in the weeds, but before the dog got it rose again and went 50yds. before the dog caught it. He just gave it two snaps and bolted it, feathers and all. This was a little too much to bear with, but if the dog was punished he would light out for the nearest house and get under it, if he could. I felt much like making a double on the dog, but possessed myself in outward quietness, though raging within.

One bird had been marked down at the further end of the cornfield. I went after it, and the dog got out of sight in the corn, About where the single bird was supposed to be a whole covey got up, just as another covey, flushed by the dog, came dropping into the corn 75yds. to the left and in front of me. This was too much for the old man. Both barrels were fired, and not a feather touched. The dog came up and was put after two that had dropped into the corn a little apart from the others. He pointed them singly, in good style. One was killed and the other, badly hit, reached the woods. The main body of this flock rose wild when we went after them, and went into the woods. I tried for a double, and as usual got one. The other covey had dropped in the edge of the corn along a low hedge. They rose wild from the dog and scattered among some brush heaps. Here was a chance for sport. Two coveys scattered just enough for nice work, and located to a rod; but there were only two cartridges left, and I thought surely two birds would be found as I went back to the wheel, so I turned back and left all this fine layout of marked birds, promising to see them some other day. All told, there were now fifteen quail in the old shooting coat, one in the log and brush heap, and one in the dog.

It was stiff work getting up the hill from the creek, and then two and a half miles all down hill to the post-office, and in ten minutes I was asking the postmaster for the mail. Then another one and a half miles and home. I did not know the old coat was so heavy till I took it off.

Altogether it was as good a day as any man ought to have. With the exception of the temper-trying dog it was perfect. This is written in the hope that some poor fellow who can't go shooting may find satisfaction in reading about it, and I wish that fifteen people who haven't tasted quail for five years could have had those fifteen quail.

I almost forgot to say that as the next day was just as fine, and Jim Clements wanted to go, we went in the afternoon and bagged seventeen.

Rabbit hunting seemed the popular thing on Thanksgiving Day. One party of two got seventeen, another party of two got fifteen, and a merry crowd of five bagged thirty-five.

O. H. Hampton.

Natural History.

The Record of the Snow.

Until the snow comes the book of nature lacks an index. You may walk for days in succession through familiar fields and woods without suspecting the existence all about you of scores of timid wild creatures, whose habit is to sleep by day, or who retreat noiselessly at your approach to places of cunning concealment. It is marvelous at what a distance the slight vibration of the ground under the human foot can be detected by the delicate, fear-quickened senses of the little inhabitants of the woods and fields. I sometimes fancy that they can hear me coming almost as far away as a boy can hear a train of cars when he kneels down and lays his ear to the rails. If, therefore, you live in a thickly settled part of the country, where the wild creatures are few in number and constantly harassed and terrified, you will be apt to think—until the snow comes—that your neighborhood is entirely deserted by the wilder small birds and animals. You never see them when you take your rambles, nor is there any evidence to the unaccustomed eye that they have been there before you.

As a matter of fact, however, these suburban and much traversed sections of country are still peopled, as a rule, by a goodly number of their former small inhabitants. As a proof of this fact, take a walk two or three days after the first considerable snowfall of the winter. You will be astonished to find that this apparently soundless and motionless wilderness, this little desert of scrub oaks and pines, is fairly populous with small and active folk, who have plainly recorded their goings and comings on the soft, white surface of the snow. Your supposedly blank book proves to be a volume of most varied and interesting contents, of which a comprehensive index lies before you. In all directions you behold the telltale, wandering pathways of birds, squirrels, foxes, skunks, and mice. In certain spots it would almost seem as if there had been a carnival, a sort of winter fair or congress of sports, to which all the wood folk of that section had flocked, so numerous and varied and intricately interlaced are the tracks of the birds and four-footed creatures. Such a medley of claws and paws! See, here is the path made by a whole bevy of quail, as they crossed the little clearing, "bunched" and huddled together, so that their entire track is scarcely 6in. wide. The snow is trodden into a kind of fine lacework where they passed. They were probably on the run, as the quail seldom moves about at all save in a perpetual fright and haste after the brooding season is over. It is wonderful, for instance, how fast they will run before a trailing dog, keeping him on a constant crouching, gliding trot for fifteen or twenty minutes, before he finally overtakes them along the hot scent and "points" them or puts them to flight. These birds were not pursued, but they were running, as may be seen from the occasional scrape of an extended and balancing wing, and the length of the stride, where one of the bevy has for a moment strayed a little out of the file. I suppose no sportsman would think it worth while to go gunning in these well-scoured woods, so near the factories and the back yards of the little houses where the operatives live; yet it would be no small sport to locate that bevy of birds with a good dog, scatter them in these fairly open scrub oak patches, and try a few stirring shots upon the wing, as the singles and doubles whirred away through the winter sunshine.

A fox has been across the bit of clearing too—possibly in pursuit of the quail, as his delicate, clear-cut track parallels theirs. Think of a fox prowling about within a bowshot of the outermost factory of a city of 100,000 inhabitants! not coming there by venturesome chance, but dwelling in the vicinity the year round, safely and snugly housed beneath some splintered ledge of rocks. He has this distinct reward of his temerity, that there are, as it were, two strings to his gastronomical bow—the wild creatures of his natural domain, and the henyards and chicken coops of the millhands, under the very shadow of the encroaching brushwood. One good, fat hen will go as far as six quail or forty mice, be it remembered, and one such catch means two or three days of plenty and ease for reynard in his burrow under the rocks.

You may know a fox trail in the snow by its linear exactness. Every footprint is directly in front of the preceding, as if reynard walked simply on two legs, set in the middle of his body, behind and before. How he manages to keep four feet so perpetually in line is a mystery. It must be with the same cunning, conscious intent as the Indian, who also makes as narrow and linear and inconspicuous trail as possible through the winter woods, and if he has occasion to come back that way, returns in his own footsteps, and so simply reverses the record.

In strong contrast with the cramped and timorous track of the quail is the bold, free, snow-scattering stride of a solitary old ruffed grouse cock, who, confident in his years of survival, has been abroad this very morning, and has but recently crossed the clearing, at right angles to the quail, as the freshness of his track shows He does not proceed long in a straight line, but zigzags from bush to bush, and tuft to tuft, either for variety and amusement, or in search of food. He moves with freedom and boldness, but travels slowly and with many leisurely pauses. If we should follow his devious trail for fifty rods or so no doubt we should hear him burst into thunderous flight far ahead and out of sight, for he is too old and experienced a bird to be caught within gun range of a man, whether the man come stealing on like a hunter or not. Once let a ruffed grouse attain to years of discretion—say two or three of them—and I will trust him, particularly if he be a male bird, to outwit the sportsman in any locality. So far as guns and dogs are concerned, he will survive to a rpie old age; but I am not so sure of his ability to contend against the meager nourishment afforded by much-trodden, cleared, and stripped suburban woods, where scarcely a berry or any wild fruit ripens, that is not already marked and appropriated in advance by some factory boy or girl.

Everywhere among these scrub oaks and pines the white carpet of the woods is intricately patterned and traced by the tracks of the long-tailed wood mouse and the hardy, cold-defying red squirrel. Here and there you will see a little brown-mouthed burrow in the snow, where some squirrel has mined for a pine cone, dragged it up, and devoured the edible part on the spot, scattering the coffee-colored chips about him as he eats. Chipmunks, apparently, do not venture forth in the winter, unless some unusually warm and spring-like day rouses them from their nap and calls them forth for a bit of lunch to tide them over until April, but the red squirrel is abroad at all seasons and in all weathers. I have seen him breakfasting in the hemlocks when the thermometer registered ten degrees below zero, and often in a driving snowstorm his welcoming, cheery chatter would startle me as I plunged through some evergreen clump, head down against the storm, on my homeward way.

For a greater part of the winter the short-legged skunk continues his diligent, predatory wading through the snow. You will find plenty of his dot-like tracks in these suburban woods. He is a mighty hunter, and a mightily persevering one, despite his dumpy, Dutch build and abbreviated legs. In the snow his trail looks like a succession of black-spotted dice cubes, laid side by side, so short and positive and ploddingly repetitious are his steps. It seems ridiculous that such a creature can toil through the woods, and seize such swift prey as partridges and rabbits. Yet he does it, by virtue of his marvelously keen senses, the silence and stealthiness of his approach, and the lightning-like quickness with which he makes his final spring. The skunk is the snake among mammals, silent, slow-gliding, quick as lightning in the fateful stroke, and inexorable and relentless both in pursuit and capture.

We are fortunate if we find any report of the rabbit or hare in this snow record. Between the hunters and the foxes and the boys with their snares and traps, there is little chance for these delicate and savory creatures to survive. Perhaps, however, we may find where the last hare in the woods has leaped timorously across the moonlight on his broad, furred snowshoes. What a conspicuous trail he leaves—each padded hindfoot half as broad as a man's hand. But how he can skim over the surface of the snow, while other smaller-footed creatures sink and flounder in it! If he escapes his many winter enemies, he may thank his snowshoes and his protective gift of speed. Some day, however, when he is dozing in his form, under the genial warmth of the midday sun, a prowling skunk, driven forth in the daylight by hunger, will creep up and get him by the tender throat. And then, alas! there will no longer be a last hare in the woods.

James Buckham.

Kissimmee Aligators.

John Hancock and son have returned from a hunting trip of several months. They went through to Fort Myers, and killed 599 'gators on their way down and more than 200 coming back. They report alligators about as plentiful, apparently, as in former years in the Kissimmee Valley.—Jacksonville (Fla.) Times-Union.

Animal Intelligence.

Editor Forest and Stream:

It is a pleasure to read and reply to fair and intelligent criticism such as characterizes the letter of Coahoma in your issue of Oct. 29. He more nearly confines himself to the exact issue under discussion than any of your correspondents.

Some show a desire to run off from the question of the origin of instincts, and to take up and discuss the question whether or not animals possess reason. I never raised any such issue, and I have not myself any disposition to try and draw any line between instinct and reason. Neither fact nor argument, upon either side of that question, cuts the least figure in that which I have been discussing. Let me state it once more: Is chance the centrifugal force of nature? Has all her variety resulted from chance variations of a few original types. The question arose over a statement that shy trout and wild ducks were the progeny of parents who had been snagged or crippled, but survived. This raised the broader question above stated. My position was that some intelligence—not chance—presided over all development, including the acquisition of instincts. To illustrate by the development of the venom fang in certain serpents. A non-venomous snake once began to secrete a venomous saliva which proved useful to him. He did not begin by accidentally secreting sugar, salt, oil, rosewater, alcohol and a thousand miscellaneous drugs and chemicals, until, by a happy chance, he hit upon a venom exactly adapted and proportioned to his wants. But, by some intelligence, the right thing was produced at the right spot and in the right amount. I called that a blue print method of development, not a chance method. And now comes Coahoma, and without taking direct issue with either my argument or the facts adduced, and frankly accepting the issue, he confronts me with an example, a dilemma and a hypothesis. Let us first consider the example:

The acorn, with a long cup, which floats in the water and survives overflows, is merely one case of a selected breeding of a desirable type. In my first article I wrote: "I am not denying the value of cross-breeding and selection in producing the highest possible development of all natural instincts, abilities or powers, or any natural variations of any physicial form. For instance, by selection we may breed a variety of dogs with very short tails. But we will never accomplish it by amputating the tails." So, by selection, we may breed longer or shorter cups on acorns. But that fact cuts no figure in the question whether the first cup on the first acorn was a sort of wart or accidental excrescence, or whether it was, from the very first, a useful organ, evidencing intelligent design in its structure, function and location. That is the question we are discussing.

I do not see any warts or accidental excrescences in nature anywhere. If her whole centrifugal force were merely a disposition to break out into warts, we could surely always find a few in evidence, not yet accidentally converted into useful organs, such as cups on acorns, or perhaps heads and limbs on animals. So the example of the over-cup acorn seems to me to cut no figure.

Next, let me encounter the dilemma. It is in the form of a conclusion to which Coahoma states that my argument must lead me—to wit, that "a supreme ruler of the universe manages all minute details in the development of organized life by his own intelligent direction on this globe of ours, and planetary system of our sun, as well as those of a hundred millions of other suns." To this I would reply, first, that no more here than in geometry can I deny the force of sound argument wherever the conclusion may point. But in this case the dilemma presented seems to me entirely imaginary. I can recognize "blue print methods" in nature's development, and draw no further conclusion than that some intelligence is present. Many other theories of the mystery of life and existence are possible beside the one which Coahoma indicates.

I recognize the existence of intelligence, as I do that of matter; without being able to say whence either came, or whither it goes, or what it all means, or to tell anything more about either than simply that I see satisfactory evidence of its existence. So the dilemma becomes but a phantasm. As in matters mathematical, we need to go as far as demonstration will carry us, but there is no need to go further.

Next, let us wrestle with the Hypothesis. It deserves the big H, for, as Coahoma frankly permits to appear, it is the sole refuge of those philosophers who maintain that chance alone has presided over the development of nature. It is supposed to be iron-clad, and impenetrable by logic of any weight or caliber. Let me present it carefully and fairly.

I argued that it is as impossible to conceive of chance producing the world which we see about us as to conceive of a newspaper being produced by a chance mixture of type, picked up, for instance, at random by a blind man, and set up in forms. For the coincidences and adjustments, in any single natural object, seem to me as infinitely numerous and as delicate as the coincidences and adjustments of type in many printed pages. But now comes the Hypothesis. Let the blind man have eternity to work in and he will produce the newspaper! Let chance have eternity and it will produce the world! I quote Coahoma's own language, to wit: "Mr. Alexander's necessity for his blue-print theory arises from his failure to avail himself of that unlimited credit in the commodity of time which all philosophers are permitted to draw upon in the great bank of eternity. In other words—granted time enough as a fulcrum and Mr. Darwin's lever is fully capable of lifting the protozoan into man." As I read Coahoma's paper, he is not himself, I think, satisfied with this hypothesis, logical as it may seem, but he projects it at me rather to see what I would say about it.

I might raise the question whether or not the blind man and chance would not each still be less than halfway through his task, but there is a more effective argument already set forth in my former letters. The argument for chance is based upon one indispensable premise. This is that characteristics acquired during the life experiences of an individual must be transmitted to its subsequent progeny. The advocates of the chance theory must all support this proposition, and it has been thoughtlessly accepted by the majority of readers for a generation back. It was that which led to my first letter.

The most delightful and lovable people, like Mr. Mather, were accepting that barren, narrow, illogical theory that three crippled grandparents can pull nature's great centripetal force, heredity, from its grooves, and impress new directions upon it. Not only were they losing all appreciation of nature's beauty and mystery, but they were believing a theory as directly contradicted by every-day facts as are the popular beliefs about the influence of the moon on the weather and the crops. For the premise that acquired characteristics are inherited cannot be proven. The most careful and accurate tests certainly show that heredity (as I expressed it in my last letter) is very, very hard, if not absolutely impossible, on trigger to ordinary life experiences. But for it to be even simply not easy on trigger is to destroy the premise for the great iron-clad Hypothesis. It has no leg to stand on if accidental impressions upon individuals usually fail to impress their subsequent progeny. This fact is put beyond doubt by the monumental tests afforded by numerous national and religious mutilations, such as compression of the feet by the Chinese, of the skull by certain Indians, and others referred to in my last letter.

Here I might leave the matter, but one other popular argument of the chance theorists remains which no correspondent has yet advanced, but which some one probably soon will. As I would like to make this my final remonstrance with them, I will state it.

One objection to chance as the centrifugal force of nature, which I noted in my first letter, was based upon her "endless gallery of exquisite sculpture and painting." Indeed to any observant mind the art in nature's infinite beauty of form and color calls as loudly for intelligence as having some part in its production, as the intricacy and delicacy of her wonderful machinery does. The hypothesis of chance, with eternity to work in, was supposed to be a sufficient substitute for intelligence, so far as ingenious mechanisms and working devices were concerned; but there was still apparent an absolute necessity for some intelligence, to which could be ascribed the aesthetic beauties of color and form. And a more narrow, shallow and inadequate theory, if possible, than that of the three crippled grandparents was invented. It amounts to a supposition that all animals have been endowed with a natural artistic sense and appreciation of the beautiful in form and color, and have been controlled entirely by their sense of beauty in the selection of their mates. They have thus bred out of existence all ugly and inartistic forms. A single short and sufficient reply will at once occur to any one who has noted the selection of mates among animals. The one prominent fact is that the sense of sight plainly cuts no figure in it whatever. Any animal might be painted, mutilated or disguised by artificial malformations, but it would not make the slightest difference in its being selected as a mate when instinct teaches that the time for mating has arrived. This theory, like the great hypothesis, is erected upon a false premise. Even with its premise it would never pretend to account for more than outside and visible beauties, while those hidden from ordinary view are infinitely more numerous, and no less perfect and delicate, or less persistent through hundreds of generations.

Indeed, no observer of nature can fail to be impressed with the idea that nature's beauty is for beauty's sake, as an artist might paint to please his own eye, where no other eye could ever see his work. But I am not writing a book. I am only making my last, but still my indignant protest, against the shallow theory that behind nature's wonderful exhibit there is nothing more than accidental grandparents, that chance is the centrifugal force of nature, and is the sole source and origin of all her varied and persistent instincts, and that her exquisite sculptures and gorgeous and delicate paintings are but selections made by animal taste out of miscellaneous and accidental excrescences and splotches of color. Instead let me commend to your readers the conception that intelligent methods have always characterized the revolution of nature's infinite variety. That the development of every species has been as plainly guided by intellect as the development of a locomotive engine, and that not only the earmarks of the method, but the quality and skill of the intellect employed, stand out even more conspicuously upon the animals than upon the machines.

That nature's centripetal force, her streams of heredity, when one started or turned by her into any particular channel, are not left subject to be diverted by the fortunes of any grandparents. On the contrary, there are a thousand daily evidences that she has not only barred all interference by ordinary accidents, but has so hedged in the stream of heredity from all approach that man, with all his science, has not yet learned its secret. He cannot yet even breed male and female at will. The strongest passions of nature, and those of universal possession and lifelong activity, do not acquire any increase of strength in a thousand generations. The subtlest instincts, not called into play once in many lifetimes, persist just as strongly and just as long. And does it not also seem logical and right that this should be so if there ever were any original intelligence anywhere? To open heredity to accident would be for intelligence to deliberately resign the reins to chance, and to commit the fortunes of creation to chaos itself.

But, however this may be, there is one further fact which is beyond all controversy, and which seems to me of great significance. While heredity is securely barred against interference by ordinary chance or accident, we see it wide open to interference by that mysterious something which I have called nature's centrifugal force. We see constantly new instincts speedily developed by whole species, and we see evidence that new powers, new organs, new limbs, or new senses even, may also be added, and adopted by heredity and transmitted to progeny. This force then is perpetually on guard, and has intimate acquaintance with every daily need of all animal organisms. The only force in sight with which we may possibly identify this is that which maintains the physical life of every animal organization, making its heart beat and every organ of the body perform its functions, but which is entirely separate from the conscious life of the individual. For this force I suggested the name sub-ego, as short and convenient. As a counter hypothesis to Coahoma's that chance and eternity have made man out of a protozoan, I suggest that intelligence existed somewhere before man's coming, and cut some figure in the process. Man did not originate intelligence, but intelligence with its blue-print methods originated him, and endowed him with a portion of itself. But he does not hold the sole monopoly of it even on this planetary system. And finally, let me close with a last hypothesis for your correspondents who wish to maintain the identity of animal instinct with reason. May not the only difference between them be this: that reason is the product of the intelligence in the ego and that instinct is the product of the intelligence operating in the sub-ego?

E. P. ALEXANDER.

Bull Bat and Robin.

Editor Forest and Stream:

I would not weary the ears of your readers by further pursuing the little bull bat controversy that unexpectedly arose between friend Didymus and myself, but for the fact that my kindhearted friend has brought up the robin question, upon which I think some profitable remarks may be made, if not practical, at least in a philosophical mode of treatment. Also, I have a grudge against Didymus for calling in question my piety, a charge so grave that it is hardly to be condoned by the complimentary expressions with which he seeks to make amends, albeit my stern integrity had a hard battle with my softer side in the effort not to forgive him.

Didymus quotes Fred Mather in a triumphant manner; and yet that gentleman (who is high authority on fish, I believe) says not a word about mosquitoes in connection with "bull bats, whippoorwills and bats." In any case the bats constitute the only significant factor in the combination, the other two being relatively too few to count much as insect destroyers; and he fails to mention the vast army of swallows and the various species of the martin family, which outnumber those noted by him probably a thousand fold.

I have not traveled as widely as Didymus, but I live right here very near the national capital of the mosquito nation, and I know all about them. Among other things I know that a bull bat would work himself to death trying to make a living on empty mosquitoes, even if he got among them, which ordinarily he does not. The facts which the observations of Didymus disclose refute his arguments, as showing that the "bull bats, whippoorwills and bats" utterly fail to keep down the myriads of mosquitoes, which do indeed make life a burden to some of us.

Didymus says the bull bat is a "fluffy little bundle of feathers and wings, with a body so small that it would take at least two dozen to fill a hungry man." Well, that depends upon the man. It is related of Governor McNutt, a former chief magistrate of Mississippi, that he regarded the turkey as "a very inconvenient bird, too much for one and not enough for two." I will wager a mosquito bar against a mosquito bite that Didymus never ate a bull bat, nor so much as ever saw one divested of its feathers. The bird, when dressed and served, is about the size of a snipe (long bill), perhaps a little larger, and resembles him in several other respects. By the way, the snipe is equally as "innocent" as the bull bat, and not quite so hard to shoot. The partridge (quail) is also equally innocent, and not so good to eat. In short, I do not know any "game bird" that can be charged with misdoings that call for capital punishment at the hands of the sportsman.

There are but two requisites, in so far as I apprehend the subject, that constitute eligibility for the enviable position of "game bird"—the one, that he shall afford sport in the shooting; the other, that he shall furnish a toothsome dish for the table. All other modes of classification are merely provincialisms.

And that brings me to the robin, the pretext for this argument, which, like a woman's letter, saves the prime subject for the *post scriptum*.

The robin claims exemption from the game bird category on the plea that he is more valuable for other purposes.

Here is another example of that ancient cause of controversy, looking at opposite sides of the shield.

In the States north of the cotton belt the robin is a summer resident, and during the breeding season is widely distributed in pairs about the orchards, gardens, parks and farmyards. He makes himself familiar to the inhabitants, their wives and children, and assumes the rôle of a semi-domestic bird. He is moreover a pretty songster, and lends a cheerful aspect to his surroundings. It is easy to understand that he has acquired a firm hold upon the affections of the people who live in the States that are his summer home.

But in the lower cotton States his hasty "twee-twee" as he scuds before the north wind, high up beneath the leaden clouds, in a widely scattered column of invasion, about the 1st of November, proclaims the advent of wintry storms. Here he does not cultivate the social side of his environment, but keeps himself aloof from the people of the land and resorts to the deep woods, where many berries grow, where he addresses himself solely to the business of getting fat; and though he does not commend himself as a game bird to any but the small boy and Sambo, because he is too easy a target for the sportsman, yet as a gastronomic subject he is "out of sight." In my younger days I have shot robins and broiled them in the woods when they were so covered with fat that the drippings put out the coals in which they were broiled.

Now, in the entire absence of any such social and domestic relations as subsist between Cock Robin and his Northern summer neighbors, the people of the Southern States can hardly be just objects of censure for picking up such a delicious morsel as a fat robin, from a simple culinary range of contemplation, even as they avail themselves of the luscious oyster and highly esteemed terrapin.

The attitude of the robin, as between North and South has its counterpart to some degree in that of the bee

martin, or king bird, as between the South and further south. The bee martin is a summer resident of the cotton States, where he is widely diffused over the country in pairs during the breeding season. He does not commend himself in any special manner to his human neighbors, but nobody ever thinks of molesting him, though he does sometimes levy contributions upon the bee hives.

In the fall he migrates to the southern coasts of Louisiana, where, like the robin, he congregates in large flocks, and betakes himself to the berries and the business of getting fat. They change their name as well as their habits and general character when in winter quarters, being called by the creoles *grassei*. They are esteemed a great delicacy by the Louisianians, and it is said that they become so fat as to burst when striking the ground after being shot, even as do the "pepper bot" (whistling plover).

The moral intended to be conveyed by this rambling dissertation is that there are two sides to most all questions.

COAHOMA.

MISSISSIPPI.

An Uncommon Fox.

DUNBARTON, N. H.—*Editor Forest and Stream:* Occasionally in this part of New Hampshire a black fox is reported as being seen. Sometimes it is a silver-gray, invariably whoever sees it (unless it be some experienced fox hunter) is very positive of its being a pure black fox.

About the 1st of November I was out one morning after a fox, when I met two men, who were strangers to me, driving along the road. They asked if I was after a fox and whether I had ever seen a silver-gray fox. I said I never had seen nor heard of a genuine one being killed in this section. One of the men said: "We just saw a silver-gray fox about a mile from here." The fox had crossed the road within 50yds. of them, and they had a good chance to look it over. I questioned them pretty closely and made up my mind that what they had seen was a fox which is partly gray and black. Once in a great while such a fox is killed about here. A number of years ago I shot one and saw another.

I made up my mind to try and get that fox, and I have been several times to the vicinity where it was said to have been seen. I shot two foxes there and saw another; but they were our common red foxes. On the morning of Nov. 26 I went out in the same country, and my dog soon had a fox started, and had been driving him in some small spruces and pines for about fifteen minutes, when I saw the fox crossing a small open place 50yds. away. I saw at once that it was not a red one, and I killed it instantly at the first shot. When I went to it I found I had killed the handsomest fox I ever shot. It was an old dog fox, and weighed 12lbs. The whole of the under side of head, neck, breast and belly, and the back parts of hips was black. The legs jet black all the way up to body, brush very black, with a large white tag at end; the sides, back and upper part of head were gray. A small patch of red was on each side of neck. The only white was a small spot between the hind legs and the tip of brush. Now this fox is not a black one, nor is it a silver-gray, yet I am pretty confident it is the one which has been seen and reported as being jet black. I do not know just what it would be called, unless a sort of mongrel. I know it had a very handsome pelt, and I was glad to get it.

C. M. STARK.

The Linnean Society of New York.

REGULAR meetings of the Society will be held in the American Museum of Natural History, on Tuesday evenings, Dec. 13 and 27, at 8 o'clock.

Dec. 13.—By members, "The Warblers of North America." Exhibition of specimens, with discussion of distribution, habits, etc., of Lucy's, Virginia's, Nashville, Calaveras, orange-crowned, lutescent and Tennessee warblers.

Ernest Seton Thompson.—Observations on Texas Wild Cattle.

Dec. 27.—J. D. Figgins, "Notes on Birds Observed in Greenland with the Peary Expeditions of 1896 and 1897." Illustrated by specimens.

By Members.—"The Warblers of North America." Exhibition of specimens, with discussion of distribution, habits, etc., of Parula, Usnea, Sennett's, Cape May and olive warblers.

WALTER W. GRANGER, Sec'y.

AMERICAN MUSEUM OF NATURAL HISTORY.

A Wolf Track Reported in Maine.

Editor Forest and Stream:

My brother, Dr. Walter Chrystie, who has just returned from the Maine woods, reports that last week he saw a track in the snow which his guide, Jim Grey, of Greeneville, Me., said was made by a wolf. As they were in the wilderness about six miles southeast of Loon Lake there can hardly be any mistake as to the track being made by a wolf, as it is extremely unlikely any dog was in that neighborhood.

PERCIVAL CHRYSTIE.

Hudson River Wolves.

"Cortlandt Town, Dec'r 3, 1789.—Then Received of Pierre Van Cortlandt by the hands of Javis Dusenbury, Twenty-four Shillings, in full for the killing of four Wolfs, that were killed within twenty miles of Capt'n Boyd's in Philip's town as appears from the several certificates showed at the time, I say rec'd by me.

Samuel Taylor, his mark by order.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

The "Brief's" Pictures.

THE illustrations in the current edition of Game Laws in Brief, Mr. Charles Hallock says, well represent America's wilderness sports. The Brief gives all the laws of the United States and Canada for the practical guidance of anglers and shooters. As an authority, it has a long record of unassailed and unassailable accuracy. Forest and Stream Pub. Co. sends it postpaid for 25 cents, or your dealer will supply you.

Lies that Never Were Told.

LET me hasten to explain that they were never told because there was no occasion to tell them. It was a false alarm. The amateur Ananias has thought it all out, attended to every detail, made it so it would hold water, complete and perfect, and well learned. In this it differs somewhat from those mysterious "songs that never were sung," which we hear about being way down in the bottom of the singer's soul—vague, sweet, half-formed, inexpressible thoughts, corked up like a bee in a bottle.

All fishing and hunting is conducive to lying. The hero who conquers the temptation is painfully exact, and spends his life combating a natural desire to exaggerate. But no one should be too severe with the sportsman who twangs the long-bow now and then. In his poor, weak way he is trying to convey an idea of his sensations when he tells of fighting the fish that broke away, or fixes the distance at which he killed the deer. An abler man could have enthused his hearers by dilating on the exact truth. Thus women, who can express their discontent in good words, are often hard on their erring brother, who finds his only outlet in profanity.

But as to cases in point, to bear out our text. There are three incidents in my mind, one of which is a confession, and all are connected with deer chasing in days gone by. As every one knows, when a man drops work and leagues with a gang of men to drive deer, his whole duty to society is to kill the deer if it comes in rifle shot of him. If he fails to do it, he has "shot the albatross," and with no eye to see, he often concocts a tale for the ears that hear the repeater that raises the echoes of the hills. For such unfortunate mortals should noiseless powder be invented.

I.

On one afternoon a short chase was arranged, and I was sitting at the root of a dead sugar, with the waters of a mountain stream rippling at my feet. It was late in the day, and I thought the chase must be over, and I took a book from my pocket and a pencil, and was making a calculation on the fly-leaf of some question of figures that was a live issue then, but forgotten now. My rifle, a Winchester of .32cal., was resting on my knees. My attention was attracted by the click of a deer's feet on the rocks of the river, and about 100yds. above me was a doe coming down stream. The book and pencil were laid aside, and I had the deer covered in an instant. The deer came on with the steady gait of a deer running in water, and it was pointing out to the bank nearly opposite me. I held on a point behind her shoulder, and fired when she was broadside on. I distinctly saw the bullet hole over the heart, and it made a great impression on me.

It seemed to have no effect on the deer, which disappeared in the woods, giving me four more shots as it ran jumping through thick brush in the dusk of evening. Then I was in trouble. If the deer had been hit, I thought, where I saw the bullet hole, it would never have got out of the river. I was the youngest man in the party, and I had a wholesome fear of the consequences. We had been chasing for several days without having got a deer in gunshot. Then, in my distress, I prepared the following statement of facts: As I was sitting open-eyed and alert, a small deer had jumped into the river just 132 steps above me, and turned up stream. Catching a glimpse of the gray in my sights, I had pulled on the deer, and the deer had fallen down. It had immediately gotten up, however, and I had fired four times at it until it had gone out of sight around the bend. Such were the short and simple annals of that fiasco.

In my misery I wandered aimlessly across the stream and into the thick brush where I had last seen the game. There, at the root of a tree, lay the deer, shot through the lungs. Of course, there was a great revulsion of feeling, and Richard was himself again.

II.

On another occasion, a hero of many a stricken field confessed to nervousness on the deer stand, and a desire to avoid consequences by patching up a reasonable excuse. A battle-scarred veteran, the Captain, was placed at a stand on Williams River which is peculiar in the respect that the place at which the deer usually come in is at a certain time in the morning directly between the stander and the sun. On this particular morning a doe came into the stand at this place, and the sun was in exact line and in the hunter's eyes. The Captain fired and missed, and instead of throwing another cartridge in place he cocked his Winchester and snapped when he caught sight. By the time he got a cartridge in the barrel the deer was just entering the woods, and he took a snap shot at it.

He sat there devising some means of explaining why he had not killed the deer, when the cry of old Dan was heard, and down the mountain he came like Nemesis, and there was an accusation in every note to the man who had missed the deer.

The Captain spoke apologetically to old Dan, but the hound paid no attention to him whatever. Dan went into the woods, and in a moment reappeared with the deer before him. The deer was badly wounded, and came staggering down the river, Dan walking behind and not saying a word. When nearly opposite the Captain, he says, Dan stopped and looked at him as much as to say, "Now, you tenderfoot, shoot that deer." The Captain killed it. He had shot it through the body before, and but for the hound it would have died where it had stopped in the woods.

III.

The next instance is one which the famous Senator Kenna, whose statue is in the Capitol at Washington, was fond of recounting. That distinguished gentleman hunted regularly in this section. He was an ardent sportsman, and fond of killing deer, but he laid down his gun to photograph a bounding buck on one occasion, and succeeded in getting a good photograph.

In this case the excuse was actually told to Senator Kenna, but it did not live to be repeated before the deliberative body around the camp-fire, and so not having been produced in that high and honorable pow-wow, it may be classed as an account that just showed itself enough to let people know it was there before it was laid on the shelf.

Senator Kenna had included in his camping party an old gentleman who was extremely anxious to show the younger men how to kill deer. In assigning him a stand he was put near the Senator, on the river above him, just out of sight around the bend. In an hour or so the Senator heard a couple of shots at the stand above him, and saw a deer come round the bend, scramble up the bank and fall dead. He immediately started to the stand, but was surprised to see that the stander did not come to find the deer. Thinking he would give him a pleasant surprise, he went to him and found the old gentleman standing looking very cold.

"Did you shoot?" asked the Senator.

"Why, no, what makes you ask that question?"

"I thought I heard you shoot. What are those shells doing on the ground?"

"They don't belong to my gun."

"Didn't a deer come into this stand a few minutes ago?"

"No, there didn't," and by this time the old gentleman was resenting his cross-examination by swearing a good deal. The hounds then came in.

"What are these hounds doing here?"

"Running sheep, for all I know. Confound it, John, don't you believe me?"

"Why, certainly, only I saw a deer come right from here and had heard some shots, and the deer tumbled over dead. I thought you had killed it."

"What?"

"It's lying right there beyond that pine brush."

"Say, John."

"Well."

"I killed that deer. I was lying a minute ago, John. I just couldn't help it."

ANDREW PRICE.

MARLINTON, W. Va.

The Colorado Game Law.

DENVER, Colo., Nov. 15.—*Editor Forest and Stream:* Your note asking about the constitutionality of the Colorado game law came duly to hand. I went to the commissioner's office in order to get the best information, but he was absent—in the western part of the State, where it was reported the Ute Indians were invading the State and threatening the game. To-day he sends me the enclosed, which I think covers all the cases that have been in litigation involving the game law. There is no decisive conclusion. The most important case is the El Paso county one, in which Judge Harris decided ex parte that the law is unconstitutional. We understand that Judge Harris is an enemy to game protection, and that his decision was a mere expression of his own feelings.

The only defect in the law is in the fact that more than one subject—viz., game, fish and forestry—are treated under one heading or title. We shall try to have this technical objection removed at the coming session of the Legislative Assembly—beginning the second week in January. The warden has continued prosecuting new cases under the law; has been very vigilant, and has secured numerous convictions under which various offenders have been punished.

WM. N. BYERS.

Commissioner Forestry, Game and Fish, Colorado.—Denver, Nov. 14.—Hon. W. N. Byers: Replying to your inquiry concerning the present status of the game laws of the State, I have to advise you that they are still in statu quo so far as relates to any trial in the courts as to their constitutionality.

About one year ago the present month I filed several informations against the Brown Hotel Company, this city, in the court of Justice Hunt, for printing the names of certain game on their bill of fare, and for having game in possession, and for offering the same for sale. The State secured judgment in this court; and we were again successful in the county court, Judge Steele, on appeal on the merits of the case, the county court declining to consider the points raised as to the constitutionality of the act. At the same time he remarked that there was some question in his mind as to the constitutionality of an act embracing under one head the three subjects of forestry, game and fish. This case is now in the Supreme Court on appeal, and I am in hopes it may be passed upon by that tribunal early in the session of the Twelfth General Assembly, if indeed it is not possible to get a decision before the meeting of that body. My understanding is that the Brown Palace people have until April next in which to file their arguments in the case, but I have requested the Attorney General to file a request with the court that the case be advanced.

About one year ago the present month also I paid a visit to Cripple Creek, and there found grouse offered for sale in the market in violation of law. I seized all I could find so exposed at several markets, and filed informations in the county court at Colorado Springs against the parties. Afterward, and before these cases could come to trial, this court declared the game law unconstitutional in the trial of a case brought by the Humane Society against some persons for shooting pigeons from traps, in a manner authorized by Sec. 15 of the act. It is quite probable that so much of the act as relates to that subject is unconstitutional, and has no place in a game and fish law.

On advice of the district attorney of El Paso county, I went to Colorado Springs and signed new informations, and the cases were dismissed in the county court, and new information filed in the district court. Time passed and I received no notice of the trial of the cases. Finally the district attorney wrote me, urging the dismissal of

the cases, on various grounds, none of which I deemed important. Following a second request of the kind from the district attorney, which met with a prompt refusal from me, and a request to have the cases set for trial at an early date, I was astounded upon reading in the newspaper dispatches the news that Judge Harris, at Colorado Springs, had dismissed these several cases that I had filed, on the ground that the act under which they were brought was unconstitutional. This action was taken without notice to me or any person so far as I know friendly to the law. It was a remarkable proceeding indeed, and one hardly becoming the dignity of a district court. Yours truly,

J. S. SWAN,
Commissioner.

From Adirondack Letters.

Editor Forest and Stream:

Earlier in the fall I received a letter from the woods which was equal to a day's hunt with extraordinary luck on it. My hunting nowadays has to be done by gas-lighted hearsay, and the results, though not always real, are no less gratifying, at times, than the actual stumbling over logs at inopportune moments and the real shooting at game. The letter came from a school teacher, a charming person, and another letter, received from my boy friend, supplied certain missing details. The two letters, properly dovetailed, might make a story worth reading. The letters:

"We have been in the woods, Mr. and Mrs. Alva Finch, Will Finch and I, and such a time. The woods were simply beautiful (drag it out, please) and the trees pretty. The ride across Canachagala Lake was especially delightful. There was a sweet little breeze blowing and the waves were just lovely. The leaves hadn't begun to turn yet. They looked old, but not dusty at all. You should have seen us going over the trail, the guides with their packs and us. I had on that blue bicycle skirt, bicycle boots, a gray waist and a little round cap—the 'rig' you liked. They got terribly wet and all wrinkled up, and I never will be able to wear them again till the tailor gets through with them. You know Big Sol, who works for Mrs. Finch? He carried one of the packs and I walked beside him. He told me all about himself and his ambitions. Do you know, those men are human to the core, if only one gets to know them—good, big fellows, and gentle too.

"We got to the river—such a fine walk. We saw some deer marks on the trail, and there was the cutest little mink by the boat you ever saw—roguish eyes it had, but awful lips. We went fishing one day, and oh! yes, I was with Mr. Will when he shot a what you call it?—a dough, or doe, or—anyhow we went on a walk in the woods with the rifle, and we walked and walked and walked, lost our lunch, and for forty-nine hours we tramped, kept right on. Every once in a while he would stop and say, 'See that?' 'What?' 'A log.' A little further: 'Look quick,' and I, 'Now what?' 'A stump.' Then 'P-s-s-s-h!' and I would stop. 'What is it?' 'A rock.' By and by I ceased to be interested in alarms, and after I'd seen bushes and sticks and nothing at all, I wandered a few yards from him. Then I heard him gasp. I looked. He looked cute. He had the wood part of his gun on the ground and his hand over his eyes, like a Buffalo Bill cowboy. 'Come here, quick!' he said. 'I will not,' and I sat down on a log. 'Please; it'll go.' 'What will?' 'Oh, Lord! the deer.' I ambled over. 'Where is it?' 'There; see?' 'That log?' 'No, the—no; can't you see? There, he moves—quick!' 'Looks like a Harlem goat,' I told him. He looked startled, made a face at me and began to shoot. It jumped and ran and it staggered and went out of sight.

"'Now we'll go get the other one,' he said. 'What other one?' I wanted to know. 'Why, there were two, and we'll get this one when we have found the other. Then we began to look. We went around all the trees. We climbed over logs, went through bushes and slipped on rocks. He looked worried. 'I guess—er—we'd better get the other,' and it was easier to say it. We went back and forth, around and up and down. I sat down and let him look. No blood, no nothing. We started for camp, and pretty quick there was the deer, dead, behind a big rock.

"'Hah!" he said, 'here it is.'

"'The poor little thing!' I said. The little dear lay there with awful holes in it, and it was so pretty, it seemed a pity. He didn't say anything for some time. By and by:

"'Well, I'll-er-ah-h-er—it'll have to be prepared.' I said I'd take a walk. By and by I came back. 'Jove! This is awful! Ugh!' 'Wish Joe was here!' I fancied I would walk a little further, and I gathered some lovely little red leaves, and found, oh! such a pretty little flower, all pink and white."

The boy writes of this episode:

"Finch's party got out of the woods t'other day. Got just one deer. Cherry went with them and she saw Finch kill the deer. It was a doe, 'bout like a rabbit. It was standin' sideways back of his camp aways and he and Cherry found it. He began to shoot bang, rip, slam, and Cherry squealed every shot, 'Hit him, hit him!' and jumped up and down. Reg'lar circus some folks is in the woods. She looks mighty slick, wears her bicycle duds."

The teacher's letter continues:

"A big party came up from Bisby one day. About twenty were in it, all young folks. You could hear them a mile. They stopped at the lower stillwater in the club camp. They had lots of fun. I know they did. One day a guide came up from there. He said he had two girls down the trail who wanted to come visiting. Would we just as soon? Certainly; and the two came up. One was a girl; the other wasn't. She was real pretty. He rested his head on one shoulder and held his nice white hands together and smiled. He made me shiver. He was awfully bashful and so stupid he didn't say a word. She was all right. Big, strong and nice looking. How I hate nice, pretty boys!

"We had lots of fun in camp, eating venison and going around. It's lots of fun and everything is so neat."

The boy:

"Say, you just ought to hear the boys tell 'bout the way city folks act in the woods. The guides seen a party down to the club camp and they hollered and run and chased each other and everything, only one fellow was kind of still and didn't say much. Pretty delicate, I guess, but all right when he talked to the guides. He didn't have much to do with the girls."

What follows in the boy's letter seems rather too personal to exactly suit me. One time I went into the woods and did some shooting. I hit a birch tree away up and knocked off a 6in. square bit of bark. It is a landmark up there now.

"Are you going to have a vacation this fall? I suppose if you do get one you will go up to Moose River and bang away at the treetops again. You want to get the repeater's muzzle bent downward to an angle of about 45 or 50 degrees. You will be able to hit something besides the twigs above you then. I saw your mark up at the apple tree runway this fall. When I showed it to the minister he remarked, 'Some one must have been shooting squirrels.' I said, 'Yes, my friend S. did that two years or three years ago, when he tried to shoot a fox, thinking it was a deer.' (A rank no such thing. I showed the track, after it was over, to the boys. They said, 'A big deer, sure.') He said, 'It must have been a pretty tall fox.' I told him the foxes, when they run, generally get a-going and run up some trunk so as to get a good long jump (to a parson, mind you). I added that foxes are quite tricky, and that he must have been running up the tree when you shot.

"We had a great time at the lake (Little Black Creek Lake).

"The Parson wanted to get a live porcupine or kill one without hurting his hide. Well, when we were paddling along at the head of the lake we heard a great crash in the underbrush. Of course, we leveled our guns at a bee line for the noise, and waited results. Then up crawled a 60lb. porcupine and went straight for a spruce tree. I shoved the boat for shore, and he jumped out and took it right after him. Before he got to the tree though, the hog was 100ft. above, looking down at him, with his two front teeth sticking out and her (the porcupine was a she) upper lip drawn back, grinning just like a tickled pup. We didn't have time to bother with her then, so we put a cape on a branch of the tree and went exploring for a better lake. We were told that it wasn't half a mile from South Branch Lake, but we traveled every square foot for a good two miles, and didn't find it. Then we separated and watched an old log road till about 5 o'clock, then we went back to the tree for the porcupine. She was still there with the same grin. We held a pow-wow to decide how to get it without hurting the hide. Finally the minister said he would climb the tree and put a string around her neck and hang her. It was easier said than done. So off with his coat and tightening his belt two or three notches, up he went like a monkey. He was soon up level with her, but on the other side of the trunk. He reached around and tried to put the noose over her head, but she turned square around and began to strike with her tail. The tree soon had quills for a square foot where the porcupine had driven them in. The minister then broke off a branch and began pounding her on the head. She turned and went down the tree for a ways, and he right after her, but he got the best of her and headed her back. She crawled out on a branch and he shook it and down she came with a thud. I rolled a 200lb. log on her head while he came down and put the noose around her neck and choked her about dead. It took both of us to carry her to the boat.

"We rowed for camp. When we got pretty near there I saw the porcupine was breathing. She being at my feet, I took the rope and was going to hang her. She wasn't dead a bit. She jumped and rared. I took a flying leap over to the other end of the boat. I guess the minister was a little scared too, because he took his gun and shot her through her quills on her back, and the bullet passed on and knocked a splinter off the bottom of the boat ½in. wide, and 8 or 9in. long. The water began to pour in pretty fast, and I took the paddle and knocked the porcupine senseless and threw her overboard. I told the minister if he wanted her he could come out and get her after I had got ashore. He said he didn't care anything about it. We got pretty near shore, when the boat sunk in 3ft. of water. That big leak and the numerous others made the boat fill pretty bad when we only had a ¼lb. baking powder can to bail with.

"The kids play football now. I have at present a big nose, seven or eight bumps on various parts of my head, a sprained ankle and wrist, a stone bruise on my foot, and a lame hip, but I guess I can play to-morrow. I study Latin and algebra now. They keep a fellow going in school as well as out."

That is the way of the Adirondack woods boy. He lives a great life, with all the joys of outdoor existence and all the comforts that don't interfere with it.

RAYMOND S. SPEARS.

NEW YORK CITY.

Michigan's "Hunting Record."

MT. CLEMENS, Mich., Dec. 3.—*Editor Forest and Stream:* A report in the Detroit Evening News of Dec. 2, from Grand Rapids, says that "The Michigan hunting record for the season just ended is claimed for young Sam Cable, of Sullivan. Since Oct. 1 he has bagged more than 1,000 quail and partridges. He was out every day, and averaged twenty-one birds daily. He does not come of hunting stock either, his father having never fired a gun."

What could he have done with the birds? The law forbids selling them. Don't we need a restriction on the amount of game a person may kill in a season?

J. P. W.

Sapelo Rod and Gun Club.

THE Sapelo Rod and Gun Club, of Mackintosh county, Georgia, have their club house now open for members. This new club has a control for hunting of over 20,000 acres. While there is a water frontage of fifteen miles, at the present time there is a great abundance of quail, doves, etc., and the sea trout make the waters alive. The ducks are arriving, and promise to exceed last season's great abundance.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Massachusetts Game Interests.

BOSTON, Dec. 1.—*Editor Forest and Stream:* I send you the report of a conference of representatives of sportsmen's and farmers' clubs, held at the Copley Square Hotel, Nov. 16, in response to a call sent out by the Massachusetts Fish and Game Protecvtive Association. The call said: "The object of this conference is to consider what common ground of action may be taken as to legislation affecting the preservation and propagation of fish and game, and of song and insectivorous birds, in this State; what salutary changes, if any, can be proposed and supported by all the interests involved."

President Horace T. Rockwell presided, and in welcoming the delegates said: "The Massachusetts Fish and Game Protective Association has no plan as regards new legislation, no pet scheme to advance. The twenty-two years' experience of the Association has shown the need of combined effort on the part of all those having an interest in common with the objects and purposes of the Association, viz., the protection and propagation of food fishes and game. It is desirable to learn the opinions of all as to present conditions and what, if anything, should be done to advance fish and game interests in the State. The work which has been done by the Association shows conclusively that it has not labored for the advancement of selfish ends, but to promote the general good."

Prof. Wm. H. Niles, president of the Appalachian Club, said that he was fully in sympathy with the Association in all its work, and that he could pledge the hearty support of the 1,000 members of the Appalachian Club. "Proper enforcement of the laws will accomplish great good. As an educator," he said, "I am interested in cultivating the sentiment of a love of nature, and against killing for the mere sake of killing." He would ask members of the Appalachian Club to inculcate that sentiment. He closed by saying, "You have my hand and my heart in this work."

Mr. J. M. Stevenson, of Pittsfield, referred to remarks made by him at the annual dinner of the Association in January, 1898, urging an attempt to secure unity of views as to needed legislation, as an aid in securing better laws for the protection of game, and the prevention of enactments to further the interests of the market-men. An appropriation for enforcing the laws should be made by the State. In his neighborhood a deputy paid by the day last year had accomplished a great deal; this year, having no money, that work had been neglected, and violators of the law are rampant. The ordinary deputy sheriff is of no use for that work. The district attorney might have a deputy for the purpose. Some time the sale of game must be prohibited.

Mr. C. C. Peck, of North Attleboro, submitted a paper embodying his views, as follows:

First.—The appointment of a more active and energetic commission, experts or men capable of becoming skilled in the habits of fish and game, who shall make a study of the laws of other States and of the United States; whose duties shall be mainly supervisory and administrative, and who shall be paid a regular salary, with a certain allowance for traveling expenses.

Second.—The employment of a sufficient number of paid deputies, distributed over the State, lovers of birds and interested in the propagation of fish—as an important factor of food supply for the inhabitants of the commonwealth, men who are able not only to enforce the protective laws, but also to give the commissioners information of value in the performance of their duties.

Third.—An enlargement of the hatcheries of the State, so that they shall have facilities not only for hatching, but for the raising of fish until they are one and two years old. Probably 40,000,000 fry have been placed in the streams of the State during the last thirty years, with what results nobody knows—but the same number of older and larger fish able to care for themselves would have populated the streams of the State long ago and given us again the abundance of fish of earlier days.

Fourth.—Double and triple the work of stocking the great ponds with white perch and other food fish. This law, secured only after much effort, carries an appropriation of only $500. It should be, as its advocates desired, at least $1,000, and its provisions extended under suitable restrictions to the smaller ponds of the State.

Fifth.—Make the appropriation for the support of this department $25,000 annually. It will then fall short of that of other less wealthy States, but will at least, if intelligently expended, give an impetus to our inland fisheries and game which they sadly lack, and which will soon commend them to the cordial support of the people.

"My idea of a game and fish law is to make the time uniform on all fur and feathered game, viz., from Oct. 1 to Jan. 1; make the law uniform in this respect and don't allow any one in the field with dog and gun outside those limits. If thought advisable, the counties with seashore boundaries might have an open season on sea fowl to April 15, but personally I would not do it, as spring shooting, when migrating birds are on their way to their breeding grounds, is against the laws of nature.

"As regards fish, the close and open seasons are all right, but the idea of stocking streams except with fish large enough to care for themselves it all wrong, as I have proven by my own personal experience. I don't think the State is any gainer by the sums of money expended in hatcheries, unless they make provision to have the fry kept until they become yearlings and large enough to shift for themselves."

Mr. George H. Palmer, of New Bedford, representing the Southern Massachusetts Fish and Game League, said he had been the veteran agent against all traps, nets, weirs, pounds, etc., since 1871. In connection with other associations and individuals a great work had been accomplished in preventing the wholesale destruction of the fish of Buzzard's Bay. He said he had had more "leaves to withdraw" than any other petitioner for legislation at the State House. He expressed an interest in birds also, and said the chief difficulty in enforcing the law against snaring and other game laws was the impossibility of securing evidence—men are unwilling to testify for fear of retaliation by violators—injury to property, etc. An attack on the sale of game is the only remedy.

Mr. Palmer said in his section of the State there are many fine trout streams, to which trout from the sea would ascend to cast their spawn, but for the sawmills and dams. He had undertaken to have fishways built, but in some cases the owner or operator of a mill could barely earn a living for himself and family, and in such cases the State should bear part or all the expenses of building fishways. He once met Com. Bracket, and drew a bill to provide for this, but some members of the Legislature got up and protested, and "knocked the bill higher than a kite."

Mr. George H. Mackay, an officer of the Audubon Society, said he had tried to secure the passage of more stringent laws for protection of certain birds, but had found it up-hill work. He pronounced the law allowing the sale of game during the closed season a vicious one. Birds should not be killed during their migration. In his judgment the only way to get anything is to go for it, and go for it hard. What we now have can only be saved by aggressive legislation.

Mr. C. C. Munn, of Springfield, president of the Camp Comfort Club, said that better enforcement of existing laws was greatly needed. The best sportsmen seek the woods and streams less for the purpose of securing game and fish than to get in contact with nature. But the trout and the birds furnished an incentive to take needed recreation. In his section resort to the law against trespass had been found ineffectual in attempting to protect streams which had been stocked by clubs and individuals. In Westfield many streams have been thus stocked without being posted.

Mr. Charles H. Raymond, president of the Rehoboth Farmers' Club, stated that in his section the farmers are in sympathy with the association, and suggested that if all the representatives present would go back and spread the sentiments and feeling of this conference much good would result.

Mr. William B. Phinney, a vice-president of the Lynn Fish and Game Protective Association, and Mr. Thomas L. Burney, a member of the same, reported that their club would heartily co-operate with the Massachusettts Fish and Game Protective Association in any attempt it might make for improvement in the laws or in their better enforcement. The question was asked whether it is legal to search a man in the woods for ferrets.

Dr. Samuel H. Spalding, speaking for the sportsmen and fishermen of Hingham, said those he represented were in favor of increased protection. His town had appropriated $200 or $300 yearly for the enforcement of existing laws. He reported that there had been a marked increase of smelts in his section, due to the work of associations and the towns. Most of the quail, he said, are picked up by Sunday gunners. He reported that snaring and ferreting are carried on in the outskirts of the town, and said there was need of "live wardens" in such districts.

The secretary stated that he had received many letters from clubs not represented in the conference expressing deep interest in the cause of protection and the purpose of the meeting, and urging the enactment of more stringent laws and calling for better enforcement of existing statutes and for more efficient wardens.

HENRY H. KIMBALL, Sec'y.

Hounds and Still-Hunters.

MILWAUKEE, Wis., Nov. 29.—*Editor Forest and Stream:* I notice that Mr. Emerson Carney takes exception to my little article on hounds and still-hunting; and many more will do the same, I expect, for most men like to hurrah their own game.

I have read Mr. Carney's articles with a great deal of pleasure, and I believe him to be a good all-round sportsman. But with all due respect to him, I must say there are a few things he don't know. My article is no more misleading than his. His statement that hounding tends to drive out that which is not killed I beg to differ with. I have hunted over the same ground for several years, and never failed to find plenty of deer. Now, if the hounds run them out of the country, they would not be there. Hounds will not make deer any more than foxes or rabbits leave a certain locality. They come right back when the hounds are thrown off. You will always find plenty of them over the same ground the next day. That I know from experience, and quite a long one, and so does any man who has hunted with hounds—if he knows anything.

I have no objections to Mr. Carney's still-hunting, if he enjoys it. In regard to the fairness of it, it's a matter of record that the still-hunters are slaughtering all the large game, and nine-tenths of it goes to market. I would like to ask Mr. Carney why market-hunters don't use dogs. It is not so certain. Oh, no; they can't kill them fast enough. They prefer to follow the deer until they lie down and kill them when they jump up.

In regard to the men I mentioned, I certainly mean fair still-hunting. There are quite a few experts on the face of the earth, and it has been my luck to be acquainted with a few of them. I am no slouch myself, but I am perfectly willing to take off my hat to them. If Mr. Carney has any doubts and will come this way in the season, I will find the people and the price. There have been over 6,000 deer killed and shipped to market in the State of Wisconsin this season; and it's a very short one of twenty days—all by still-hunting.

As Game Warden Zinn says, "Five years more of such indiscriminate slaughter will practically exterminate them."

I did not write my former article looking for any argument, but my business takes me over Michigan and Wisconsin, and I am not too old to learn. I am looking on and see what is going on every year, and it makes me mad, and if the ways and methods of the majority of still-hunters are all right, I am thankful I am not a still-hunter. It may be a good thing, and it may be the only right way, but I am obliged to doubt it. I have many friends, good sportsmen, who still-hunt deer, and claim to enjoy it. Probably on the same principle that a man enjoys tough steak. If our forefathers were living to-day they would probably be hunting with the hounds if the law would let them. For I believe the old boys were the right sort. Mr. Carney says: "As the game diminishes, we must be lenient with those who take advantage of the game in such manner as the law allows." The law allows them to be slaughtered. Of course we must be lenient, we might hurt some one's feelings. I am very sorry, but I can't take off my hat to Mr. Carney, and I believe he is a good fellow at that.

L. H. HASCALL.

Lake Superior Deer Hunting.

(*Concluded from page 447.*)

I HAVE never found it necessary to hunt on the Sabbath day, and my first Sabbath after the incidents last narrated I spent in camp in company with Hearn. We did the necessary camp work, and spent a part of the day in reading and in writing letters. The other boys, however, hunted. The following is an extract from the notes I made at the time: "Sunday, Oct. 30.—Gilmer got 3 shots—no deer. Winters 5 shots—no deer. Bender 4 shots and killed a small deer. Baur drew a bead on a deer, but concluded it might be White—his companion—and did not shoot. The deer skipped."

Probably not a day passed but several shots were fired at deer, but a great deal of it was snap-shooting. The deer might be standing or lying under some thick branches, and possibly branches weighted with snow, for snow fell at least every twenty-four hours, and as the hunter approached it bounded off behind some convenient cover. A few momentary glimpses and as many quick, sharp reports of a rifle, and the chase was over. It would be of no use to follow that deer if you missed him. He would lead you through the worst cover to be found, and leave you at night exhausted and possibly lost.

On Monday Bender and Winters stayed in camp. Baur and I circled Witch Lake and pulled off to the southeast around some barren hills and small lakes. We sat down to rest on the top of a small steep hill, steep on all sides but the northeast, the direction we were going. After chatting a while, we were brought to our feet very suddenly by the appearance of two deer heads over the crest to the northeast of us. They saw us the instant they poked their heads high enough for us to see them, and whirling around dashed back down the hill. As we sprang to our feet we opened on them. I shot twice and Baur three times, but they were dodging through brush and leaping over logs at lightning speed, and we failed to score a hit. They were about 100yds. from us when they whirled to run, and at about 250yds. were completely hidden in the dense shrubbery that covered the low lands in places.

We went on north by northwest around the lake, seeing many tracks, but no deer until we got into dense green woods, where the ground was covered with ground hemlock, called by hunters shin-tangle. Here the deer had been feeding, and it looked much as if a flock of sheep had been turned loose. I was sitting on a log resting, and Baur was some steps in front of me, when he brought his gun up to his face, saying: "I see one! I see one!" This was followed by the roar of his big .45-90, and that by a craning of neck and peering through the smoke; but Baur had made no new record. He had missed as usual.

No deer were killed on Tuesday or Wednesday. On Thursday, White, Gilmer, Hearn and I went up the railroad nearly two miles, separated by about 200yds., and started east, hunting in line toward the Michigamme River, which runs parallel with the railroad about two miles distant. We had gone about a mile, and I was on the right flank and was sitting on an uprooted sapling on the brow of a hill that went off steep to the eastward, when a dog came running from in front of the other boys, and going south at a lively clip. I jumped up and tried to get a bead on her, but I was some 50ft. above her and probably 100yds. distant, with many trees intervening, and could see her only when she passed through open spaces. I kept on trying to catch her in one of these holes between treetops, until she had passed the hill and was some 150yds. to the southeast of me, and still going, when, as a last resort, I shouted at her and she stopped, but with her fore parts behind a birch tree. I waited a moment for her to move, but as she did not seem disposed to do so, I drew on her close up to the tree and fired. She took a few jumps forward and turned a half somerset over a log. Before I got to her she was dead, shot through the body about 6in. back of the heart with a .32-20 Winchester. I doubt whether a larger bore gun would have done more effective work.

Gilmer said he would help me to carry the deer to the lake, and we tied her to a pole and started off, leaving White and Hearn to go on with the hunt. We had never been in that locality, and did not know the proper course to the lake. So when we struck an old tote road followed it, thinking it led out to the railroad, and would take us nearer camp than the point we first meant to make on the lake would be. The road was so tortuous it was impossible to tell what its general direction was, so when we were satisfied we had toted that deer about far enough we laid it down to reconnoiter. We had laid it down several times as a matter of fact, but only to rest. This time we wanted to see where we were at. I was not a little surprised after a climb of several steep hills to the westward to look down on Witch Lake. Our burden was yet a half-mile east of the lake, and in the hilliest part of the hills. I went back to Gilmer and told him that we had a half-mile of the hardest kind of climbing to reach the lake, and the only alternative was to go around the lake to the right or left, a distance of fully two miles. We concluded to try to make the lake, so shouldered our burden and started up the first hill, each carrying his gun in one hand and pulling himself up with the other by grasping bushes, roots and whatever came within reach. We made it in time, and hung the deer at the water's edge, where it could be easily loaded into our dugout, but that was the last time I carried a deer strapped to a pole. It's too tearing on the shoulder. After supper Gilmer and Lewis took the dugout and went after the deer, came back and reported that they could not find her. The waves were running pretty high, and it was probably well for them they did not find her. It was enough for them to find their way to camp through the darkness. The following morning Gilmer and Proper brought the deer to camp.

During the day Proper killed a fine large eight-point buck in an open swamp about two miles northeast of camp. That evening White, Hearn and Bender left us, and pulled out for home. The next day—Saturday—Winters and Baur were in the edge of a thicket on the north side of Witch Lake, when a large doe came trotting up toward Winters. He said he intended to let her come until she saw him and turned to run, exposing her side, when he would shoot. She came within ten or twelve steps of him, then whirled to run. He brought his gun to his face and timed himself so as to shoot her through or back of the shoulder; but as she whirled around she struck her head against a sapling and stopped just as he fired, his ball striking her forward of the shoulder in the brisket. Why he did not get her before she got out of gunshot he did not state. There was very little snow that evening, and though she bled some, she got away, let us hope not seriously hurt.

The following day, Sunday, I walked out to where the foregoing had occurred, and made up my mind that Winters had been about as badly rattled as the deer. Monday I spent fishing, and Tuesday took a ramble over along the river. It was a warm, lazy day. I had just shot a big rabbit east of Witch Lake, and was heading for the lake and camp, when I heard a dog belonging to our neighboring camp trailing something near the lake. There were two dogs with that camp, but as they had not been allowed to run deer, nor go far from camp, I supposed this one was trailing a rabbit. When I got to the top of the hill and looked down on the lake, I saw some of our boys fishing off logs, and a couple in the dugout near a beaver dam, while a hunter was following the hound toward the south along the side of the hill. I took a position and waited developments. The hound was coming around back of me, and presently a small deer came dashing over a ridge to the northeast of me, and I took a crack at it, but missed. It sped on through a tamarack swamp bordering a small lake, making a gray streak until it crossed a small ridge and went out of sight. The hound I did not see. Presently, bang, bang, bang, went a Winchester north of the center of the Witch Lake. A moment later I saw two puffs of smoke from the dugout, and when I reached camp there were two more deer hung to the pole, one killed from the boat by Winters, the other by Lewis.

The following morning snow was falling, and we stayed in camp. In the afternoon Winters went to Republic on the train and came back in the evening, bringing some eggs and apples. The following day, Thursday, Baur baked some apple pies. I took the dugout, and rowing across the lake, tied up at the east end and struck out, intending to hunt until tired and come home by boat. I was going south over a burned piece of ground of innumerable hills and hollows, and had reached the summit of a ridge, when a deer sprang up some 50yds. in front of me, and with one bound cleared the side of the ridge, landing on level ground at the base of the ridge. The elevation must have been 18 to 20ft., but the side of the hill was pretty steep. I was astonished, but did not hesitate to bring my gun up and take a crack at it when in mid-air. If I had held my fire until the deer struck the ground I might have hit it as it gathered to make the jump into a convenient thicket. But it got away, and I tramped on until I came to the timber, where two bucks had been chasing each other, and timber cutters had left a large pine tree that had fallen up-hill and rested on a mound with the butt end some 10ft. off the ground. I stepped onto this log and walked out onto the butt end, where I had a good view of the forest about as far as I could hope to hit anything. Another advantage in being up off the ground is that a deer is not so apt to see or smell the hunter.

I had stood there some moments, when I saw a buck and doe off to my left, but had no chance for a shot. A moment later I saw a deer stop in front of me, but could see only a spot seemingly about the size of my hand. I knew it was a deer, and after waiting a few seconds for it to move drew a bead on the spot and fired. I aimed to shoot past a tree, and drew so close I may have wabbled into the tree, for the deer did not move. I yanked the lever and drew on the spot more carefully. This time the spot vanished, and I saw a deer further off hoist its flag and trot away. I waited some moments, thinking that possibly the other buck would show himself, but he didn't, so I went down to where the deer had stood. There were plenty of deer tracks, and I had no means of picking out the right one, only by the way the deer had bounded off. There was no blood, but I followed what I decided was the right trail in the snow a distance of about forty steps, and walked on to a fine large buck. He had fallen headlong and died without a struggle. My ball had entered the point of his right shoulder, and ranging back lodged against the skin on the left side. It was the same little .32-20. I hung him to a bent sapling and started for the boat, not caring whether I saw any more game or not, but before I reached the place a small doe with a full-grown fawn started to run around me, and I forgot for the moment that we had venison enough and to spare, and proceeded to kill both of them; but the manner of doing it I will leave out here, for the reason that it has been written in these columns. I went for my boat, to find Proper had taken it and was sitting in it about a quarter of a mile away, fishing. I called to him and he came over to where I had the two deer piled up on two logs, that lay out into the lake. We loaded them into the boat and he took them to camp, while I walked around. When I told the boys at camp that I had a fine buck out in the woods, they were considerably surprised, and Gilmer and Lewis went and brought him in.

The next day, as we were tearing up camp, a wolf serenaded us with his doleful howl from across Witch Lake.

G. W. CUNNINGHAM.

Maine Deer.

BOSTON, Nov. 26.—I will drop you a line and say that I have just returned from a trip to Muluncus, Me. I was there ten days, and shot two bucks that weighed 180lbs. each. The deer are very plenty, and the house kept by Mr. A. S. Knight is all that a sportsman could desire.

ED. W. MESSENGER.

Maine Big Game Record.

THE Bangor & Aroostook Railroad sends out a list of the big game shipped from stations along one line during November, showing totals of 1,347 deer, 77 moose and 19 caribou.

In Maine Snows.

Boston, Dec. 2.—A most remarkable snowstorm for so early in the season has about stopped all the big game hunting in northern Maine. Over the former crusted snow of 5 or 6in. there fell, on the night of the 24th of November, nearly 6in. of light snow, and this was followed by 12 to 15in. more on Sunday, the 27th. But it would seem that almost enough deer, moose and caribou had been killed for one season, and if the close season was general on all big game Dec. 1 it would certainly be better for the future game supply. Messrs. H. S. Fisher and W. T. Farlew have returned from a very pleasant deer hunt. They went to South Moluncus, 13 miles from Matawaumkeag, on the Bangor & Aroostook. A. S. Knight's ("Uncle Andrew's") teams met them at the railroad. "Uncle Andrew" and his wife, of the Forest Home, did everything in the world to make the sportsmen comfortable, and at a very reasonable price. "Uncle Andrew's" boys guided them, and in one day, after a fall of snow, they could easily have secured their full quota of deer. Bucks were wanted, however, and they tried other days and succeeded up to their full expectations. Mr. Shedd and his son have come out of the Aroostook woods with their full quota of deer. Albert J. Hedges, of Foxboro, has lately brought out of Maine a deer and a moose. The latter is reported to have weighed 900lbs.

The D. J. Flanders party was successful in moose and deer hunting, as has already been noted in Forest and Stream, but the taking of Mr. Flanders' moose involved difficulties that but few would be willing to endure. From Ashland the party went 20 miles to Pratt Lake, at the headwaters of the Machias River. From that point they went four miles further to Moose Camps, where the most of the hunters remained; taking three moose and about all the deer the law allows. Mr. Flanders' guide, Arthur Winslow, suggested that he had a gumming camp 10 or 12 miles further into the woods and in a good section. To this camp Mr. Flanders decided to go, and the second morning in camp they were off, taking only a few pounds of flour, a few potatoes, a piece of salt pork and some tea. At midday they rested and ate some biscuits that they had hastily put in their pockets at the camp. A draught of cold water was all that they could stop to get, though the guide afterwards regretted that he had not insisted on making a fire and some hot tea. They plodded on through the swamps and thickets till, somewhere about 2:30 o'clock, they struck the high ground. Mr. Flanders here asked the guide as to whether it was nearer to the gumming camp they had started for or back to the main camp. He considered the distance about the same either way. They rushed on, Mr. Flanders already about exhausted, with wet feet and tired legs. An hour or two more brought them to a trail the guide recognized. It was now nearly dark and still three or four miles to the gumming camp. The guide suggested that he would make a fire, and, leaving Mr. Flanders by it, press on to camp, get some blankets, and returning they would camp there. But the hunter decided not to be left alone in the woods, but to press on. It was now dark. The guide peeled birch bark and made torches, by means of which they were able to find their way. They reached the gumming camp soon after 6 o'clock, sooner than they had hoped when at the last stopping-place.

The guide made a fire, baked some bread, frizzled pork and boiled potatoes. An hour after, with his clothing nearly dry, his tin plate on his knee, with a dipper of hot tea by his side, the moose hunter said he felt like thanking the good Lord that he was there in the camp and not in the woods. The guide quietly remarked that he also felt the same, for he had begun to expect the hunter to fail up altogether. The next morning dawned bright and beautiful. They had slept the sleep of tired hunters, though with only boughs and a blanket or two for beds. They calculated that they were nearly 15 miles from the main camp and fully 3,000ft. above sea level. From this mountain they could see everywhere, woods and waters in every direction. They were many miles from any other human beings. That day they located a big bull moose, and the following day got a shot at him. Two shots from Mr. Flanders' rifle stopped him, or at least he did not attempt to run. The guide stepped out to finish him, when he charged straight for the hunters. A well-directed shot, as he came on, stopped his career, and the prize was theirs. They stayed at the gumming camp four days, and Mr. Flanders is greatly pleased with the adventure, though it was fraught with greater hardship and danger than he had anticipated.

Dec. 5.—The storm and gale were particularly hard on the Cape Cod and South Shore gunners. Some of them were so unfortunate as to have been caught in camp over that terrible Saturday night, and they will not soon forget their experiences. Two Boston boys were gunning off the South Shore and resolved to stay in a rude cabin over night. By 10 o'clock they were satisfied that the rude structure could not withstand the wind, and was in danger of being washed away every minute by the tide—higher than ever known before. They decided to leap into the water and run. Their course was circuitous over the marshes, and they became bewildered by the blinding storm. They had read somewhere that for two persons lost in the blackness of night the best way is to take hold of hands and both to persist in keeping a straight course. They did so, and near morning saw a light across the marsh, which they soon reached in an exhausted condition. Two men were caught in a gunners' cabin down on the Cape. The rude shanty was mounted on cedar posts. They soon saw that the wind was likely to blow them over any minute, and that the receding breakers would carry them out to sea, while the tide had come up so as to threaten to swamp them at any moment. They waited in terror till the tide had begun to recede, when they decided to jump into the water and struggle for the shore above them. They did this, but suffered greatly from the ice-cold water, through which they had to wade, with the breakers threatening to wash them out to sea. Great flocks of black and other ducks are reported to have been driven in by the fury of the storm, where they could not possibly get out, but had to seek the inland creeks and marshes. Blinded by the fury of the gale and snow, they were an easy prey to the gunners who had the courage to be out after them.

The storm reached the Maine hunting grounds and buried them to the extent that big game hunting has been very hard. Still there are some reports of deer taken. First have come to Boston a couple of Maine guides, with a moose or two and all the deer the law allows. These they have taken directly to the market and sold for barely enough money to pay the expenses of their trip. Wonder if they are registered guides? The Maine open season on moose closed Dec. 1, though the season on deer is open till Jan. 1. Last year there were 139 moose killed in the same length of open season in the Aroostook region. This year the number is greater, with a total record already in of about 150. The papers say that woodsmen are of the opinion that moose are more plenty than a year ago. From the Dead River region come reports of more moose seen than a year ago, with a greater number killed. There seems to be an effort already begun to influence the Maine Legislature, which convenes Jan. 1, not to put any greater restrictions on the taking of moose. The writers in the Maine papers, whose only object is to boom hunting resorts, are already laboring hard to make it appear that moose are on the increase, but every returning moose hunter that I have seen admits that he has had to go further back this year than in former seasons, and is ready to allow that sections where formerly signs of moose have been abundant are now destitute of such indications.

Late New Hampshire reports say that the snow is about right for hunting, and that a good many deer are being taken. A Boston gentleman tells me that his men at his mill in Bartlett have had good luck the past week. In the vicinity of Campton fully a dozen deer have been taken the past week, largely by local hunters. Littleton reports also note the taking of a good many deer. In the Waterville Valley a number of deer have been taken, with reports of deer taken in the vicinity of Canaan.

Special.

The Game Question in Jackson's Hole.

Jackson, Wyo., Nov. 20.—*Editor Forest and Stream:* The game question in Jackson's Hole is one that interests not only good honest people in the valley, but all true sportsmen everywhere. In taking up the matter, I shall, if permitted through the kindness of the editor, go briefly into facts, as it is my desire to show positively that the game of Wyoming has been unjustly dealt with by county officials and deputy State game wardens, and that no particular effort has been made outside of the efforts of private citizens, and the Jackson Hole Gun Club, to prevent the unlawful and indiscriminate waste of the game. In this article and all future ones touching upon this question I intend to call a "spade a spade," to handle men and motives as I see them, and to show positively that the worst enemies to game protection in Uinta county, Wyoming, are the petty local officials, who believe themselves above the law, and who, if aggrieved at anything I say, may answer my assertions.

There are two classes of people living in Jackson's Hole. One is of those who see in the country a future for themselves and families, and who are particularly anxious to protect the game within the borders of Uinta and Tremont counties. The other class is of those who have no permanent interest, no property, nor anything to keep them, outside of being able to kill game for the meat, hides, heads and teeth; and in this manner they make a partial living without work. I am pleased to say that this element is greatly in the minority.

In the last four years past, especially under the old law of 1890, persons were permitted to capture game for speculative purposes, and are yet so far as that goes—but must first obtain a permit from the State Game Warden. This being a legal proposition, some people took advantage to make an honest dollar; but public sentiment was against the capture of game, not so much on account of the number shipped as because numbers of elk were killed and died from the exposure of the pursuit. In 1897-98 strong protests were made to the Governor of Wyoming, instituted by the Jackson Hole Gun Club, to revoke numerous permits issued to one H. K. Glidden, of New York. The county attorney of Uinta county at the time took issue against the State authorities and against the legal authorities which determnied the status of the game within the borders of a State. He evidently presumed that the dwellers in Jackson's Hole were a class who altogether lived upon game, and further were inclined to be unlawful in other particulars. But when the people protested as a unit to the Governor the true conditions were brought to light, and for once the game fared well. The following winter the game was well protected; not a shot was fired during the winter at game, unless to dispose of a scabby bull.

The issues, however, raised in the opinion of Attorney General Fowler, and the premature rejoinder of County Attorney J. W. Sammon, would not down. The county attorney had said, in his communication to the attorney general, that "he would certainly refuse to prosecute a violation of law in regard to capturing game." Notwithstanding this, Mr. S. N. Leek, while at Evanston, Wyo., obtained a promise from the commissioners that they would appoint one deputy State game warden under salary for the fall months of 1898, upon the recommendation of the Jackson Hole Gun Club. The club held a regular meeting, selected Mr. D. C. Nowlin as the person to be their representative deputy and made the recommendation to the commissioners. The county attorney arrived in Jackson on or about the 20th of July, '98, and looking over the grounds, determined that as Mr. Nowlin was a Republican, he was not acceptable to the authorities at Evanston, and immediately notified the county commissioners to hold up the appointment, which was accordingly done. Later Jas. I. May, who lives on the south line of the timber reserve, and who has been a resident of Wyoming something like two years, was appointed a deputy, and Fred W. Cunningham, of Elk, was appointed another deputy. I am free to admit that the appointment of Mr. May was justified; that Mr. May is, so far sa I know, a gentleman, and interested as far as he knows in the welfare of the game interests of Jackson's Hole, and that so far as his services went he was honest and faithful in rendering them. The manner in which he received his appointment, and his absolute newness for such a position, made it extremely difficult for him to act, hence no arrests nor collections were made by him, and no good to the game interests resulted from his political appointment.

As to the appointment of Cunningham, I know it to be a fact that he was familiar with parties killing immense numbers of elk and antelope. That he was many times importuned to stop the illegal killing and to arrest the parties, and that in each instance he absolutely refused. I know it to be a fact that he collected from divers persons license moneys, issuing at the same time his personal receipt for licenses against the strict orders of the Board of County Commissioners, and in absolute violation of law; and I have positive knowledge of several parties hunting in his bailiwick without license, and whom he knew to be violating the law. I know it to be a positive fact that this game warden knew of elk being hauled out over the Teton Mountains; and in one case I am reliably informed he was party to the act in question. I think that he will get his pay from an obligated board of county commissioners, but alas, poor game!

Thus it will be seen that so far as game protection went in Jackson this last season, it was an absolute nonentity. The game was made to subserve the interests of the political henchmen. One thousand head of elk, mostly females, were slaughtered in the Teton timber reserve in violation of law during this fall. I have the names of several guilty parties; and one game warden refused to have knowledge—because he had his price. It is further against the policy of some individuals living around Jackson's Lake to have the game protected. But there is a class of citizens living in the Teton timber reserve who are progressive, wideawake and honest; and these people should at all times be protected in their rights. I am compelled to admit that all is not as it should be lower in the valley; several infractions of law have been brought to my knowledge within the last few weeks by settlers. I do know, however, that the great majority—in fact all those owning homes—have the utmost respect for the game, and will sacrifice money and time for its protection.

So important has become the game question to our people, so determined has become the law-abiding class to protect it against the unlawful opposition of politics and individuals, that Mr. D. C. Nowlin was appointed to become a candidate for the Legislature on the Republican ticket. Much against his inclination, he consented. A 700 Democratic majority of two years before seemed to indicate that he would be defeated. After making representations to the Republican county committees, they readily consented to place Mr. Nowlin's name upon the ticket. The election returns determined that Jackson's Hole should have a thoroughly competent official in the next Wyoming Legislature, one who as a resident sees and feels the interests of the game; and the most significant fact is that in the Teton timber reserve was found the only real opposition to our candidate. More than this, the solid majority vote of Jackson's Hole has relegated to private life the county attorney.

The people of this valley have won out. They demanded game protection and received it, not; they assisted to change the political situation of a county in which for years a Democratic nomination had been equivalent to an election; they made a fight against men and motives; and is it not right and just that they should receive a law at the hands of a Republican Legislature that will make the game a permanent feature of Jackson's Hole resources? We should have a law that will prohibit the indiscriminate waste of game; that will prohibit the head and hide hunter from making it a marketable commodity, and affix penalties that will insure obedience. By all means let us strike a last blow at the game interests being kept in politics. Let us make the untenable squatter obey the law or leave the country.

Of the sportsmen of the East we ask hearty co-operation. We desire you to have, when wanted, a place for you to come unrestricted by public parks and control, where you can hunt for a time and be successful. The influence you can bring to bear upon a proper and equitable game law in Wyoming will be manifold. The recent work of Indians red and Indians white upon Wyoming game must cease if Wyoming game is to exist. We claim that the progress of a part of Jackson's Hole, at least, in no way interferes with the game's increase. The mass of the people desire to see the game preserved, and this people, under a proper law for game protection, will guarantee the game increase and its future prosperity.

Wm. L. Simpson.

Jackson, Wyo., Nov. 29.—On Friday morning last constable and ex-officio game warden James Lanigan arrested George Moulton, of Idaho, on the Teton Pass, for having in his possession eight head of elk, four bulls and four cows. Being taken to justice's court, Moulton showed a license to kill game, issued by the Justice Webster La Plout, and plead it as a justification for killing and transporting Wyoming game out of the State. The court, after hearing the evidence, assessed a $30 fine, including costs, and confiscated the elk. An examination of the records revealed the fact that several parties had recently taken out licenses, intending to transport game out of the State.

The people are wild over the manner in which game is being killed and transported. Over 500 head of elk have been killed and wounded along Jackson's Lake in the Teton timber reserve, and nothing is being done there by the residents to protect the game from this wanton destruction. Seventeen wagons from Idaho went there last Friday, and more are following. The Jackson Hole Gun Club have two determined men at the Teton Pass, and it is intended to arrest and prosecute every individual attempting to transport game, license or no license. Yet this does not save the game. The authorities refuse to employ good men to protect the game, yet insist that all license fees be turned into the county treasury. Private individuals have been, and are now, paying men to ride the game ranges and hold up Idaho poachers; and we believe we are equal to any emergency.

W. L. Simpson.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Black River Association.

Editor Forest and Stream:

The eleventh annual meeting of the Black River Fish and Game Protective Association, an influential organization made up of sportsmen from different parts of the State who are particularly watchful of the angling and hunting interests in Oneida and Herkimer counties, was held Friday, Dec. 2. There was a large attendance.

The annual report of Treasurer H. A. Pride showed the financial condition of the Association to be highly satisfactory.

Secretary W. E. Wolcott presented his annual report, which was as follows:

The friends of fish, game and forest protection have many reasons for feeling gratified at the present condition of things in New York State. The cause of protection is gaining ground steadily, new recruits are enlisting, and public sentiment is on the right side. The man who angles or hunts with the sole idea of trying to break a record as to the quantity of fish or game killed in a given time has few admirers now, and pot-hunters and slayers of fingerling trout have to be very cautious if they venture to operate at all. The president, treasurer and secretary of this Association attended the annual convention of the New York State sportsmen held in Syracuse last winter. The most important action taken at that convention was the adoption of a new constitution, which changed the name of the organization to the New York State Fish, Game and Forest League, and separated it entirely from the trap-shooting interests with which it was formerly allied. Your secretary addressed the convention on the subject of the Adirondack Park, and offered a resolution approving of the purchase of lands made by the Forest Preserve Board, and thanking the State officials and members of the Legislature who had manifested an interest in the work of forest preservation. It was unanimously adopted. The recommendations of the Black River Association that the grouse and woodcock season be shortened, and other suggestions regarding the game laws, received courteous consideration. The League decided to endeavor to have Section 249, which permitted a cold-storage man to sell game the year around, repealed, and also agreed upon a number of other important amendments. Your secretary was chosen a member of the legislative and law committee. During the last session of the Legislature representatives from the New York State Fish, Game and Forest League spent considerable time in Albany, and with good results. Section 249 was repealed, the grouse and woodcock season was shortened one month, additional protection was provided for shore birds, the black bass limit was increased to 10in., and a bill to permit hounding and floating for deer was killed. The State League has been incorporated, and is now in a position to do better work than ever before in its history.

The Black River Association has continued its work of stocking the streams of Oneida county with trout, and this year, through the courtesy of Superintendent Annin and the Commissioners in granting its applications, it was enabled to accomplish even more than usual in this line. Six different shipments of trout were received and distributed by our Association within five months. The first, consisting of 2,000 brown trout yearlings from the Pleasant Valley hatchery in Bath, Steuben county, reached us on Jan. 8 last and were placed in the new Forestport reservoir on Black River. On May 2 we received a consignment of 50,000 infant brook trout from the Fulton Chain hatchery, which were apportioned to different places, for stocking streams, as follows: Forestport 9,000, Alder Creek 4,000, Remsen 12,000, Trenton 5,000, Marcy 10,000, Honnedaga 10,000. On June 6 nine cans of yearling rainbow trout from the Pleasant Valley hatchery and fourteen cans of yearling brown trout from the Caledonia hatchery were received, and two days later a similar consignment arrived. These were deposited in the new reservoir at Forestport. The young fish were healthy and active, and will no doubt furnish lively sport in the future. It is believed that the rainbow and brown trout will find a congenial home in the Forestport reservoir, and will thrive better there than any other varieties that could be introduced. They grow very rapidly, attain a larger size than the speckled trout, and are exceedingly toothsome. Near Hammondsport, Steuben county, last spring a rainbow trout, which weighed 15lbs., was captured in a stream tributary to Keuka Lake.

It is encouraging to note that numerous persons have voluntarily applied for membership in the Black River Association during the past year. These accessions are exceedingly gratifying, as they afford the best possible evidence that our work is appreciated by true sportsmen. It is hoped that our ranks will receive many additional volunteer recruits during the coming year.

Reports received from different parts of the Adirondacks show that deer are on the increase, and were much more plentiful this fall than they were a year ago. The good effects of the anti-hounding and anti-floating laws, which the Black River Association labored so hard to secure, are already apparent, although this is only the second season they have been in force. If jacking and dogging can be prevented three years longer there is every reason to believe there will be more deer in the Adirondacks at the expiration of that time than there have been before in a quarter of a century. It would not be surprising, however, if some knowing person, who has not been able to kill a deer by still-hunting, but who professes to understand all about the animals, should come forward and say that they were becoming too tame and should be hounded occasionally to keep them wild. This would be as sensible as the statements made a few years ago to the effect that the deer were dying off in the Adirondacks because the food supply was exhausted.

Ruffed grouse and woodcock have been decreasing in numbers at an alarming rate during the past few years, and more stringent measures than those now in force will be required to prevent their utter extermination. It is feared that woodcock shooting in Oneida county is already a thing of the past, but there are still a very few grouse remaining, and sportsmen should unite in an earnest effort to afford them needed protection until they have had an opportunity to increase in numbers. Strong opposition will be met with from various quarters if an attempt is made to further shorten the shooting season throughout the State. There are some hunters who would like to shoot earlier than Sept. 1, and others who object to closing the season as early as Dec. 15; so the present open period is a sort of compromise. Beyond a doubt the season ought to end as early as Nov. 15, for more birds are killed by market-hunters in the four weeks immediately following that date than during the ten weeks preceding it. The grouse are taken at a decided disadvantage during early winter, for when the leaves have fallen from the deciduous trees and the ground is covered with snow the birds seek shelter in the small evergreens, and it is an easy matter to locate and kill them. The time allowed for shooting is far too long for the proper protection of birds in Oneida county, and as we cannot count on having the general law changed any further at present, perhaps it might be wise to try and have a special act passed, similar to the one Richmond county had incorporated in the game laws (Section 56), only we should want it to cover grouse as well as woodcock, and to have the open season begin Sept. 15 and end Nov. 15. At a meeting of the officers and trustees of the New York State Fish, Game and Forest League, held in Syracuse Oct. 28, resolutions were adopted expressing unqualified disapproval of the Fish, Game and Forest Commissioners in granting licenses for the netting of fish in Oneida Lake or any other inland waters, and requesting the immediate cancelation and withdrawal of all such licenses.

The reports of the treasurer and secretary were adopted.

President John W. Hicks spoke of the harm done by foxes in the killing of game. While in the woods last winter he saw places where foxes had killed rabbits and partridges.

Vice-President S. R. Fuller, who has been familiar with the rifle and shotgun for more than half a century, and has killed more foxes than most hunters in this part of the State have ever seen, said that he had seldom found where partridges had been killed by foxes. He had known of foxes doing a great deal of good by catching mice.

Mr. Pride said he remembered one year in particular when foxes destroyed a great many large white grubs, which they rooted out of the ground.

Reports were received regarding trout which have been placed in streams in the towns of Trenton, Steuben, Remsen, Forestport and Marcy in past years. They were for the most part highly gratifying. The fishing in Cincinnati Creek and a number of other streams has been greatly improved by stocking, but in some of the brooks near Oriskany the trout were caught out as soon as they grew to be large enough to take a hook. It is proposed to try and protect the latter streams more effectually hereafter.

John H. Williams said that deer shooting began too early. He told about a little deer which was frequently seen near Remsen village during the summer, but was killed as soon as the season opened, although the animal was small and thin.

E. S. Robertson, who has had a great deal of experience in hunting deer in the Adirondacks, said that about nine deer out of ten are poor when the shooting season opens in August, and when the meat is placed in water slime gathers on it. He said he had rather have one deer killed in November than all he ever saw killed in the middle of August.

Bion H. Kent, manager of the Adirondack League Club house at Honnedaga Lake, in the Adirondacks, said that a party who visited Jones, Deer, Otter and Moose lakes last summer saw twenty-eight deer in one day.

S. W. Pride said that eight deer crossed the road at Big Moose Station on the Mohawk & Malone Railroad early one morning this fall.

Mr. Williams offered the following resolution, which was adopted:

Resolved, that it is the sense of this Association that the season for deer shooting in this State should not open until Sept. 15 or later, and should end as at present on Nov. 15.

It was decided to endeavor to have a special act passed closing the season for shooting ruffed grouse and woodcock in Oneida county on Nov. 15.

The following officers were elected for the ensuing year: President, John W. Hicks; vice-president, Simeon R. Fuller; secretary, W. E. Wolcott; treasurer, Herbert A. Pride; directors, John J. Lewis, George G. Chassell, John H. Williams, William P. Dodge, H. A. Pride, S. R. Fuller, W. E. Wolcott; delegates to the New York State Fish, Game and Forest League convention, J. W. Hicks, W. E. Wolcott. Adjourned. W. E. WOLCOTT.

UTICA, N. Y., Dec. 3.

Gun Flints.

FOREST AND STREAM of Nov. 5 bore to the sportsmen of America a request for a few gun flints for the old Hudson Bay fuzee I had lately found.

The magician who presides at No. 346 Broadway, N. Y., waved his wand, and straightway the winds from Philadelphia, Pa., brought me word, from Mr. A. H. Gillingham, where flints could be procured; a friendly breeze from the home of Mr. J. W. Schultz, among the Blackfeet Indians of Montana, wafted the kindly message that Mr. Schultz had already sent to Edmonton, Alberta, for flints for the old relic; a zephyr from Manchester, N. H., brings to me four beautiful flints, together with the kindly expressed wish of the donor, Mr. Fred E. James, that they will enable me to make it warm for Mr. Fulford and all the rest of my nephews; a friendly gale, whose puffing cheeks helped inflate one of Uncle Sam's mail sacks, brings to me four more from Mr. Robert Gilfort, of Orange, N. J.; and now, from far away Pensacola, Florida, comes a word of cheer from a brother sportsman, Mr. Bleeker Forbes, who, to assist me in my perplexity, sends to me the last two flints he has. Thanking each and every one of the donors for the courtesy which has prompted them to come to my relief, I ask the editor to call a halt—I've got enough.

In the old days of the black art the wizard appears to have been a personage to be dreaded; but in the working of the kindly modern magic he is not so terrible a fellow, after all!

The only ones who now have real cause to fear are the crackerjacks of America, as they listen with apprehension for the advancing footfalls of the old uncle.

And the magician who does not use a page of FOREST AND STREAM wherewith to fashion his wand is just 1,000 years behind this present date. ORIN BELKNAP.

VALLEY, Washington.

THERE has recently been considerable discussion in the columns of FOREST AND STREAM concerning gun flints, and it has all been caused by Mr. Belknap's mention of the old gun he unearthed and the missing flint.

In the Nov. 19 issue Antler tells us that in his boyhood days, when only flintlock guns were known and used, every store kept flints in plenty, and that they sold cheap, at 1, 2 or 3 cents each. Considerable time has no doubt elapsed since Antler's boyhood days, and has wrought many changes; flints can no longer be found in every store, but they are not as antiquated as most people would believe. It might interest Mr. Belknap, Antler and others to know that in a store right here on Broadway there are for sale no fewer than 25,000 gun flints at 5 cents each; and Mr. Francis Bannerman, the proprietor, tells us that he can get 50,000 more in this country if he wants them.

The flints which he has are not dead stock either, and while they do not sell as fast as the newest thing in neckwear, or the latest mode of bonnet, frequent calls are made for them. Just at the time when Antler asks if some enterprising member of the FOREST AND STREAM family cannot find some gun flints among the relics of the past age, a man here in New York has utilized the old gun flint in a new invention for striking a light. This ingenious contrivance consists of a wheel covered with emery paper, which is wound up by means of a thumb screw, and when released unwinds, pressing against the flint and striking a light. This should prove a good thing for yachtsmen and campers, and the inventor expects to dispose of a large number among the officers and men of the United States Navy.

I bought several gun flints at Mr. Bannerman's; two musket flints and one for the pistol. The pistol flint is ¾in. long and about ¼in. thick at its deepest part. One of the musket flints is ⅜in. long and the other measures 1¼in. I picked these out of a large collection as being of about the average size. If Mr. Belknap's barn is not yet filled with gun flints, he may have these.

Of course, the gun flint industry is dead now in this country, but flints are still made in considerable numbers in England and Germany, where there is an African trade. In 1896 the export of flint from the United Kingdom amounted to $85,150, but how much of this was gun flints the report does not say.

I have been tempted to investigate the subject of gun flints, but can find nothing very satisfactory pertaining to it.

The Encyclopædia Britannica says: "Except to a trifling extent in the preparation of strike-a-light flints, the only form in which the flint industry now continues is in the fabrication of gun flints, an occupation carried on at Brandon, and to a smaller extent at Icklingham, two villages in Suffolk. In 1876 there were twenty-one flint knappers in Brandon, and about 80,000 flints were sent away weekly, the greater portion of which went to west Africa.

"The mining for flints is conducted by sinking a narrow pit into the chalk till the bed of suitable flints (the best are 'floor-stones') is reached, and alongside the miner drives a series of small galleries or burrows, carrying all the excavated material by hand to the surface.

"The knapper's tools consist of three simple forms of hammer and a chisel; and probably the only essential modification these tools have ever undergone consists of the substitution of metal for stone.

"The flint is first broken into convenient sized angular pieces, cubes of about 6in., called 'quarters.' The next operation, 'flaking,' consists in striking off, by means of carefully measured and well directed blows, flakes extending from end to end of the quarter, this process being continued till the quarter becomes too small to yield good flakes. The subsequent operation, termed 'knapping,' consists in cutting or breaking the flakes transversely into the sizes required for gun flints, each flake yielding two or three flints of different sizes. The expert flaker will make 7,000 to 10,000 flakes in a day of twelve hours, and in the same time an average knapper will finish from flakes about 3,000 gun flints." G. F. D.

Duck Hunting in the Blizzard.

BABYLON, L. I., Nov. 28.—When the big snowstorm swept down upon Long Island Saturday night, the Great South Bay and Peconic Bay were full of duck hunters, and while some of the parties took advantage of the warning of the weather bureau and sailed under close reef for the mainland, there were others who preferred to risk the chance of getting a good bag of ducks and geese by remaining out all night. During a heavy snowstorm hunters frequently get exceptional opportunities for gratifying their sporting proclivities. A blizzard-like snowstorm confuses the ducks and geese almost as much as it does lost cattle and sheep, and under the spell of the storm they appear to lose much of their natural fear of man. It was a knowledge of this fact that induced many hunters to stay out through one of the worst snowstorms that has visited the eastern end of Long Island since the famous blizzard of 1888.

Had the proportions and severity of the storm been gauged beforehand, it is doubtful if the attractions of a fine bag of ducks and geese would have kept any on their boats. But it was impossible for those who left the mainland Thanksgiving morning to know this, and so some remarkable experiences were recorded which will add greatly to the long list of entertaining hunting stories of the day. One party of five hunters left Babylon Thanksgiving morning in a 30ft. sloop to try their luck on Fire Island beach, and after experiencing fair and rough weather, they ran straight into the teeth of the big snowstorm. When the snow began to come down in white feathery clouds on Saturday, the ducks and geese were flying in large numbers. The extraordinary flights of the birds banished all thoughts of returning to the mainland, and during the first part of the storm the gunning was superb.

As if anticipating trouble, the birds flew about in a desultory and uncertain way, uttering the most peculiar cries of alarm. Large flocks of them circled about the beach at Fire Island and flew across the bay toward the mainland. But the majority decided to stay on the beach to weather the storm. The high winds drove many of the common sea birds in from the ocean, and the beach front presented a lively scene of bird life that will not be soon forgotten by those who witnessed it. Gulls, ducks, geese, petrels and other sea birds flocked to the sheltering line of sand dunes and hills that skirt the ocean a hundred feet back from the high water mark.

In the midst of this multitude of fowls the fortunate gunners plunged, and without resorting to the ordinary methods required to get a good shot at the ducks and geese, they had all the sport they wanted. As the fury of the storm increased the confusion of the birds became more pronounced. Above the blast and roar of the wind and surf the crack of the guns could scarcely be heard, and the birds flew about in reckless haste. They were afraid to leave the line of beach hills, for they served as a landmark which would keep them from getting completely lost.

The air was soon so clouded with the falling snow that there was some danger of the hunters getting lost, and all familiar signs were gradually buried from sight. In order to keep within a reasonable distance of the boat, which was anchored on the bay side, the hunters stretched out in a line straight across the beach, keeping within sight of each other all the time. Then all that was necessary was to wait a few minutes for a shot. The loud honk of the geese and dull squawk of the ducks sounded on all sides, but not a bird could be seen. But suddenly out of the blanket of white a dozen dark specks would appear. There would be a simultaneous raising of several guns, followed by sharp reports. The birds were flying low—too low sometimes to make things comfortable. More than once a flock of them would skim along the surface of the snow and appear out of the storm so suddenly that the men had to duck their heads to prevent collision. It was impossible to see more than a dozen feet away, and the birds thus actually swooped down upon the gunners. In their confusion it was impossible to locate the direction of the gun reports, and they were just as apt to fly straight at them as in the opposite direction. More than once good shots were missed simply because the birds were too near the guns.

But the excitement of the sport was intense and everyone enjoyed it. As fast as one flock disappeared in the snowy distance another was sure to come in its wake and give the hunters another opportunity to kill a few. There was an endless string of them. But it was evident that many of the same birds circled around and passed over the same spot a dozen times. This naturally made their numbers seem out of all proportion to the actual number on the beach.

For three or four hours this strange sort of duck hunting was kept up. Nobody attempted to get the game unless it fell close to the hunters' feet, for the birds were flying so close together that it seemed like a waste of time to gather in the spoils until the end. Nobody knew how long the sport would last, and there was an intensely feverish desire to make the most of it while it was possible. It may be imagined by some that this was more slaughter than good, sporstmanlike gunning. But such was far from being the case. Had the birds been flying so close together and so continuously in a clear atmosphere, it would have been murder to have shot them down in such numbers, but with the snow falling in clouds and the game appearing upon the vision like a flash and then going almost as quickly, it was no easy matter to hit them. With the air full of snowflakes it is not easy to hit a moving target when kept in range for a reasonable length of time. The snow disconcerts the gunner, and sometimes half blinds the eye just at the critical moment. But there was added to this disadvantage the very formidable one of a target that disappeared almost in a second. With guns half elevated it was necessary to shoot them off before they could be fully raised to the shoulder. If any one is inclined to remark at the small number of birds bagged, considering the heavy flight, allowances must be made for the obstacles to good shooting mentioned. In the three hours the five men killed about one hundred ducks and geese and a few other birds that were shot more by accident than by intention. Possibly a few more were killed, but could not be recovered from the drifts of snow into which they had fallen.

By early dusk the cold became so intense that hunting lost much of its pleasures. Besides the continuous and heavy fall of snow began to cause a little alarm. It was thought better then to return to the boat. The bay was lashed into a fury by this time, and no boat could long live in the waves that rolled across it. The sloop was tugging desperately at its anchor like a great white ghost. Everything was coated with ice and then covered with deep layers of snow. In the small cabin a fire was blazing away, and the smell of coffee and frying potatoes and eggs brought comfort to tired, cold bodies and half-famished stomachs. After a plain but abundant supper everybody talked at once about the sport that had just been enjoyed. The hot drinks and food loosened tongues that had been tied outside in the cold, and until nearly midnight sporting conversation flowed in one continuous stream.

Then Captain Jack Baylis, who owned the staunch sloop, created a little uneasiness and checked the flow of words by remarking: "We're in fur a reg'lar blizzard, an' I ain't sure how we'll get out of it."

To the many queries about the possibility of danger he merely vouchsafed the non-committal reply: "There's danger, an' again there ain't."

But long before morning the party had occasion to think differently about their fancied security. We were awakened by a loud noise and heavy rocking of the boat. When everybody was awake enough to take in the full significance of this change, we understood that the sloop had been dragging her anchor, and that instead of hugging the leeward side of the beach we were rocking about wildly in some unknown part of the bay. The storm was wilder than ever. A foot or more of snow covered the deck of the sloop, and the very water around us looked like a mass of snow. It was impossible to imagine that we were floating in water except for the steady roll of the white waves, which tossed the sloop up and down. It was a strangely white, ghostly, uncanny sea. Around us was the darkness of night, but through it all was the intense whiteness of the snow. The clouds of flakes filled the upper darkness, and a thick layer of half-melted snow covered the entire bay. The wind blew a perfect hurricane, whistling through the ropes like a demon.

We were castaways voyaging upon an unknown Arctic sea. Even Captain Jack could not guess where we were. There was a continuous cry of geese around us, but we were more truly lost in the storm than the birds we had been hunting. The mercury had dropped appreciably and it was freezing cold outside. But it was necessary to do something to save the sloop. The wind might drift us through the Fire Island inlet out upon the roaring, pitching ocean beyond. The dread of this stimulated every man to do his utmost to help in saving the wreck. Everything that would answer the purpose of an anchor or drag was thrown overboard, and in this way the boat was kept from running broadside upon the wind and waves.

For hours the agony of our position was experienced with all the unknown dread that comes through ignorance of what might happen next. We tried to stop our headway, but we could only partly do this. We could tell by the path we left behind us in the snow that we were steadily drifting. For once nobody paid much attention to the noise of the lost birds. Once or twice one would rush out of the darkness and cross the deck of the boat in a wild plunge for safety. The light in our cabin was probably the attracting cause of this, but nobody paid much attention even to these demonstrations of the fowl.

We took turns in watching on the deck, hoping every moment that we might discover through the gloom some object that would indicate a shore line. But we simply drifted and rolled about, with our anchors sometimes catching in the soft bottom and again dangling helplessly through 50ft. of water. The cold was so intense that several fingers and feet were frozen before the end of the watches announced relief.

When daylight broke the snow was still flying, but there were indications of a gradual lessening of the storm. The wind kept up such a sweep that drifting snow filled the air almost as completely as if it was snowing hard. When light brightened up the whole bay it was a weird sight presented to our view. It was a ghostly landscape stretching out in every direction. So much snow had fallen on the bay that its surface was coated with a shroud of white. The undulating waves did not break through this crest of white, but made the surface heave and pulsate in the strangest manner. It was probably the heavy weight of the snow that kept us from being wrecked. The snow kept down the breakers and greatly moderated the rolling of the waves. In such a sea of snow it was impossible to tell where the water ended and where the land commenced. But we found later that we had drifted right across the bay, and our sloop was well on its way toward Babylon. Both tide and wind had swept us straight toward our destination. It may be imagined that we landed on terra firma with feelings of gratefulness, but, with the exception of a few frozen fingers and toes, nobody was any the worse for having experienced one of the wildest and strangest duck hunts that hunters ever experience around these quarters.

G. F. W.

The Yellowstone Park.

[From the Report of Capt. James B. Erwin, Acting Superintendent, for 1898.]

Carrying Firearms through the Park.

The custom of carrying firearms of some description is nearly universal among the citizens of States bordering the Park, who travel in their own conveyances, or on saddle animals; and of course those desiring to hunt in the country adjacent to the park, and who go through the Park either on starting on their trip or returning, are fully equipped in this particular. With reference to all of these individuals, the regulation prohibiting firearms in the Park, except on written permission from the acting superintendent, in which case the arms are sealed, has been strictly enforced. It is a wise regulation, and its enforcement is essential to the protection of the Park.

The mere fact that this region has been set aside as a national park engenders a feeling of hostility toward it and toward the authorities here, on the part of the people living nearest to it; and the fact that it abounds in game which is becoming more and more rare in other parts of the United States intensifies the feeling of enmity. As the benefits to the people of the surrounding country, derived from keeping the Park intact and the game protected, become better understood by them, this hostility will undoubtedly cease; and in performing the duties of acting superintendent I have endeavored to make this plain to all I have been brought in contact with, and, so far as possible, to make them friends of the Park.

United States Commissioner and his Work.

The presence of a United States Commissioner at Mammoth Hot Springs to hear and determine cases of violations of the Park laws and regulations is eminently satisfactory, and continues to do much to prevent these violations.

Fires.

The Park has been exceptionally exempt from forest fires this year, due not only to the thoroughness with which the patrol work was done, but also to the growing carefulness in reference to fires exercised by camping parties and others. On Aug. 8 a fire was reported nine miles northwest of Riverside station, a short distance outside the Park limit, but as the direction of the prevailing wind would soon bring it within the Park, a detail of officers and men were sent, and after two days of much fatigue and hard work it was brought under control.

On Aug. 26 a fire was reported and located between Barlow's Fork and Heart River, in the southeastern portion of the Park, but fortunately rain followed for several days, extinguishing it and rendering no work on the part of the troops necessary, other than a careful watch for several days. The causes of neither of these fires could be definitely determined, but that of Aug. 26 unquestionably originated from camp fires carelesssly left burning or smoldering. The origin of the fire of Aug. 8 was not so plainly accidental, and the inquiry as to its origin was limited to the determination that its starting point was not within the Park limits. It ought not to be difficult for campers in and in the vicinity of the Park to understand the incalculable damage, both in the present and for future years, that can be done by not carefully complying with the Park laws in this respect.

Forest Reserves.

Bordering on the eastern and southern limits of the Park are two forest reserves, both of which have been recommended by my predecessor to be brought within the Park boundaries and made a part thereof. It will be remembered that these tracts of land were set aside and established as a public reservation by proclamation of the President, made on March 30 and Sept. 10, 1891, and though not coming within the provisions of the act of Congress approved May 7, 1894, are yet under the jurisdiction and control of the acting superintendent and the military force in the Park for the enforcement of the law setting them aside, especially relating to the preservation of the game. To thoroughly determine the character of the forest reserve on the east, the settlers therein, game, etc., Lieut. Lindsley, Fourth Cavalry, was sent to investigate the same, and on his return submitted a report, which will be found in the appendix (F). It will be seen that there are many settlers in it, some in violation of law, and that a few mining claims are being worked.

The country does not seem to be the habitat of any large quantity of game. The forest reserve on the south contains no settlers, is of no mineral value, and is unquestionably a game country. I would for these reasons therefore urge that the forest reserve on the south be made a part of the Park, and the forest reserve on the east be not further considered with this end in view. It is probable that whatever opposition has hitherto been encountered in taking in both of these reserves as part of the Park would cease, when it is proposed to take in only that one on the south, which possesses only the advantage of being a great game country, and has no mineral or agricultural advantage to settlers. I would also recommend that the necessary legislation be enacted, bringing the forest reserves bordering the Park under the provision of the National Park protective act, approved May 7, 1894, to preserve and protect the game. As is set forth in the notice of the Department, which has been placed in conspicuous places in and about the Park, "All persons are warned not to hunt nor kill game thereon," and the penalty for doing this is ejection from the reserve, prosecution for trespass, and the holding of such persons pecuniarily responsible for any waste or damage, whether done intentionally or caused by neglect. Such is the extent of the punishment, and in its present mild form it does not form a sufficient safeguard for the protection of the reserve and its game.

Protection.

The following animals are found in the Park:

Antelope.—These are yet numerous. The snow drives them from the mountains and high plateaus, their feeding and breeding ground in spring and summer, to the lower altitudes outside of the Park, where many are killed.

Bear.—Plentiful, and have proved destructive to the stores of the detachments on station, lunch stations and campers. If they continue to increase in the future, as in the past, some means will have to be taken to rid the Park of the yearly increase. They are numerous at the garbage piles of the hotels, and are objects of much interest and enjoyment to the tourists.

Buffalo.—There are probably fifty of these animals yet in the Park. They are not increasing—due, I believe, to too much in-breeding. This is about the only wild herd in the United States, and steps should be taken to prevent the extermination of this herd from the evils of in-breeding by the purchase of a few good bulls. Full and ample protection is given these animals, and I believe that with new stock introduced into the herd an increase would follow.

Coyotes.—Very numerous in certain sections. They do some damage to the young elk, but the young deer and antelope are their particular prey. Efforts are made in winter to keep their number down by poisoning carcasses of dead animals, and to a certain extent it has been successful.

Deer.—Numerous, on the increase; and the protection afforded them has done much to make them very tame. They are frequently seen by tourists along the usually traveled route.

Elk.—Numerous, and are increasing. The Park is their breeding place in spring, and feeding ground in winter. Immense herds can be seen in nearly any direction in winter, and in certain localities in summer.

Fur-bearing Animals.—Beaver more plentiful than ever before, and their locations in the various streams in the Park are carefully watched and protected. Numerous new dams have been constructed. Otter are fairly abundant. Martens are plentiful and widely distributed, as are also the Canadian lynx, wildcat and mink. Foxes are in goodly number, the black and red being frequently seen, and some timber foxes being reported. There are also some badgers, and a great many muskrats, ground hogs, squirrels, chipmunks, skunks, porcupines and rabbits. Of the latter there are the cottontails, a few jackrabbits, many snowshoe rabbits, and the paca, the tiny rock rabbit. All these animals are increasing yearly.

Moose.—Quite numerous in the south and southwestern portions of the Park and forest reserve, and are apparently increasing.

Sheep.—In considerable numbers in various sections of the Park; especially are they conspicuous in winter, when they leave the higher peaks and seek a somewhat lower level to feed, and later on to breed. I believe their number is increasing.

Wolverines.—While not plentiful, are distributed over a large area of the Park.

Birds.

Pelicans, geese, ducks, gulls, cranes, swans, ospreys, hawks, eagles, grouse, jays of all kinds, water ousel, robins, kingfishers and various other small birds abound in the Park. The aquatic birds nest here and remain here until late in the fall, and it is probable, during the winter in streams and lakes where the hot springs prevent entire freezing of the water.

At the opening of the winter there was but a balance of $66.01 remaining on hand for both the protection and improvement. Using this until exhausted, and relying upon the untiring efforts and conscientious work of Lieut. Lindsley, soldiers and a volunteer scout, the protection of the Park was as efficiently performed, if not to a greater extent, than in former years. The plan adopted was to ascertain the location of all persons who in past years have been guilty, or thought guilty, of poaching, and never let them get beyond the surveillance of the Park authorities. This was successfully done in many cases, and resulted in the capture and trial of some of them by the United States Commissioner; and, with the assistance of the State authorities, by the civil courts, thus deterring others from attempting to poach. Unless actually taking part in the winter work here, the hardships are inconceivable, and the report of these trips made by scouts and others, showing the work done, represents miles of snowshoeing, embracing all portions of the Park, under all sorts of weather and temperature, where the parties were their own pack animals, camping usually where night found them, or resorting to the snowshoe shacks, affording but little protection.

The Department supplied sleeping bags, which are of incalculable comfort; and before the winter sets in, comfortable cabins will be built at necessary and convenient points, stocked with rations and bedding, and having stoves, which will lessen materially the hardships and discomforts of these trips. With the end in view of having transportation of some sort for necessary articles for these winter scouting parties, I believed that the reindeer recently purchased by the Government for the Klondike relief party, which was subsequently abandoned, could be used to advantage, and accordingly addressed a letter to the Department, asking, if practicable, that a few be sent here for this purpose. It is unfortunate that these animals were so located that they could not be sent here, for in the use of these animals or in sledge dogs lies the solution of winter work in the Park.

Fish.

Many streams and lakes were stocked in 1889, 1890, 1893 and 1895, have multiplied abundantly, and in spite of the enormous quantity caught yearly, and those destroyed by animals and birds, there is apparently an ample quantity yet in all the streams. I endeavored to have a hatchery established in the Park, believing this to be the most appropriate and suitable place in the United States, as this is the reservoir drained by the principal rivers of the Atlantic and Pacific oceans, and fish planted in these streams would, with natural conditions fulfilled, soon fill the streams outside the Park, but the United States Fish Commission did not deem it advisable. Later on this year it is my intention to determine if the lake bass planted in certain lakes in the Park have survived; none as yet have been caught, and it is possible that they may have perished for want of proper food. There are certain waters in the Park that will afford ample food for them, and if possible these waters will be stocked. There is no finer trout fishing in the world than that of the waters of the Park, and it is free to all.

From the above it will be seen that the Park, as a game and fish preserve, has not its equal in the world; the variety is great, and it is eminently fitted to sustain this variety under the protection of the Government. An increase in appropriation means an increase in the means and facilities of protection, and as a national game preserve, which not only holds secure the remaining wild animals and game birds of this country, but enables them to breed and multiply, thus supplying the needs of neighboring States, it is deserving of an increased fund for this purpose. This leaves out entirely its charm as a pleasure ground for the tourist, with its wonderful natural phenomena. To maintain both of these conditions there is but one inadequate appropriation for the Park, viz., that for its protection and improvement.

Natural Phenomena of the Park.

There does not seem to be any material change in these during the past year. Certain geysers and hot springs are noted as having become extinct, and others which were quiescent have again become active. The geysers which can be depended upon for regular displays are few in numbers, but constant observation of nearly all of them has enabled their time of eruption to be determined with sufficient accuracy to inform tourists, and give them an opportunity to witness their marvelous displays. There is unquestionably a close connection between temperature of water in the geyser and its time of eruption, certain geysers erupting when the water in their craters reaches a certain temperature, which varies for each geyser, and with the proper instruments for taking the temperatures it will not be difficult to foretell the time of display of those geysers which are of greatest celebrity, and thus afford tourists the opportunity of seeing them. I will, if possible, determine the eruptive temperature of the most important geysers before the next tourist season, and will be enabled to give due notice of their eruption.

Mud Geyser has been exceedingly active for a period of two weeks this summer. It has for some years been a somewhat quiescent, boiling mud pool, but in the latter part of July it became more violent, and soon gave a remarkable display of its powers, throwing immense clots of mud 50 and 100ft. away from its crater. It covered the ground and trees in its vicinity and was in this state of eruption for two weeks. It gradually became quiet, but the contents of its crater have changed from boiling mud to boiling dirty water. The Black Growler, in Norris Basin, has also displayed remarkable activity this summer, and the noise of the escaping steam through its crater could be heard for miles; and at the base a mud spring has broken forth, which apparently seems to be growing larger. The Constant Geyser has within the past three weeks ceased to play, after many years of uninterrupted activity.

A new road, now completed, between Elk Park and Gibbon Meadow, on the road from Norris to Fountain, leads past two beautiful chocolate-colored geysers situated on opposite sides of the Gibbon River. They are immense cones. From the top of each a goodly stream of water continually boils and is ejected some feet in the air. The cascades and rapids along the road, which follows the river, are exceedingly picturesque and beautiful.

The Game of Kansas.

RAMONA, Kan., Nov. 26.—*Editor Forest and Stream:* You must excuse the lead pencil, as I am writing under difficulties, camped out on the prairie, or rather in a wheatfield, right on the old Santa Fe trail. East, south and west the prairie stretches away as far as the eye can reach. But I write to speak of the welfare of the game. It has been a hard week—especially for the quail. A heavy snow came on the 21st, and since then the slaughter has gone on. To this camp (a threshing machine outfit) there has come, by hunting a small part of the time, eighty-four head of game—all shot within two miles of where I am writing—and I know of much more that has been taken in the same time, and from the same section of country, and so it has gone on as far as the snowfall reached. And yet I do not think the supply will give out.

The game laws do not amount to much, only that they do stop the shipping of birds to some extent, and then there is more or less posted ground.

Kansas under even decent game protection would supply shooting almost unlimited. The prairie chickens are fairly plenty, and some say are increasing. They have furnished good shooting, and one can still see from one to perhaps even fifty in a day's tramp, but they are bunched together, and but few more will be shot from this on, as they are very wary. The quail are very plenty, finding good cover in the hedges and food in the cornfields. Rabbits are everywhere, both jacks and cottontails, but their favorite hiding places are in the tall grass of the sloughs. Ducks, geese and jacksnipe come in their season. Along the creeks and rivers, wherever there is timber, there are coons, possums and squirrels, and for the trapper there are minks, muskrats and skunks, while an occasional otter, wildcat, or even a beaver, is picked up. The coyotes are still here, but as hard to get and as cunning as an Eastern fox. Sometimes a gray or timber wolf wanders through here, but they are seldom seen. Altogether, for one who is content with a fair bag of game for a pleasant day's tramp, Kansas is still one of the best hunting grounds in the country.

I would like to say to Fred Mather that the Neosho and Cottonwood rivers still find their way seaward, and that Coal Creek still furnishes mud cats and turtles for whoever cares to cast a line in its muddy depths, but the timber along their banks is rapidly giving way to corn and wheatfields. PINE TREE.

Some of the bags of game that have come under my notice within a year: 101 quail one day to one gun, potted; 90 quail one day to one gun, potted; said to be 60 chickens to one gun, potted; over 300 ducks to two guns, two days, wing shooting; 30 quail, wing shooting, two guns, part of one day, and others in proportion.

CHICAGO AND THE WEST.

About Western Deer.

CHICAGO, Ill., Dec. 3.—All the deer seasons are now closed, Michigan ending her open time last Wednesday. On that day one trainload of hunting traffic carried east of St. Ignace, Mich., 300 hunters and 200 carcasses of deer. At Standish, Mich., one freight car carried 75 carcasses, mostly killed around Alpena. It seems to have been a good year for deer, but the impression grows that the hunting country is becoming more restricted, so that many believe the good deer hunting will not last so very many years longer. Warden Zinn, of Milwaukee, Wis., sets five years as the limit of the supply under the present system and extent of slaughter.

State Warden Ellarson, of Wisconsin, does not share the pessimism of his deputy, but thinks the deer are on the increase, in which belief he is largely alone. He says:

"More deer have been killed this fall than during the season last year, but that was because the conditions for hunting were more favorable, but the number is not so large as in former years, when there were hundreds of non-residents hunting through the State. Under the present protective laws the deer are increasing in numbers and the sport will be better from year to year. There were very few non-resident hunters this year, not more than thirty taking out licenses in the State. There have been some violations of the law, but none of any great consequence that I know of. People appear to be in accord with the law and willing to aid in its enforcement."

This is a very optimistic view, but I think it more cheerful than accurate. As to the non-resident clause of the Wisconsin law, we were all in hopes that this year the identification requirements were such that the law could not be evaded so shamefully as it was last year, but the results do not appear to be any better this year than they were last. Surely Warden Ellarson cannot believe, or, if he does, cannot ask anyone else to believe, that only thirty non-resident hunters shot in Wisconsin this season. That is absurd. I can give him and Warden Osborne, of Michigan, the addresses of a party of three, or at least that of one of the party, who told me the facts, all Chicago men, who shot at Iron Mountain, Mich., and "near there." These were all non-residents, and they say openly that they shot on resident licenses. I presume that more than one train took to Wisconsin out of Chicago more than thirty shooters each who shot on resident licenses in Wisconsin. The number of men who go through this point into Wisconsin each fall for the deer hunting is something which runs into the hundreds, if not thousands, and I am disappointed at hearing it stated that only thirty of these shot legally in Wisconsin, for it shows how inadequate is the enforcement of the law. We are a great people for good laws, we Americans, but as to the executive side of them we are pretty careless. The Wisconsin law is an excellent one, up to the place where the enforcement begins.

Now as to the violations of the law—not to mention the undiscovered violations of the hundreds of non-residents who broke the law—I am disposed to think that there may be some slight further inaccuracy in Mr. Ellarson's estimate. His deputy, August Zinn, seized nine illegal carcasses and sold them at auction one day last week, the stuff belonging to men in five different places. Mr. Zinn thinks about 4,000 deer were killed in Wisconsin that came into Milwaukee alone, and that perhaps 2,000 more were shipped out of the State. We have had a flood of cheap venison in Chicago, and it is not unfair to suppose that a great deal of this came from Wisconsin, as indeed has in several cases been discovered by Milwaukee wardens. It seems very likely to me that the laws of Wisconsin were not only to a partial extent but to a very large extent violated this season. This I say in deference to the facts, and with no wish to cast any slight or blame upon Warden Ellarson's administration. It only seems just to suppose that, if Warden Ellarson thinks the law has not been violated, he will not try to get after violators. I should like to convince him that were a few of the latter sort of game in his woods this year, there will be plenty of them next year. So long as the State of Wisconsin can show only about thirty non-resident licenses for a season of shooting, it will be extremely likely that the law has been violated in a great many hundred instances. The passenger departments of the Northwestern, the Chicago, Milwaukee & St. Paul and the Wisconsin Central railroads all contain records which would utterly disprove that sort of estimate.

The Good Express Companies.

It is touching what confidence the wardens all seem to have in the great common carrier companies. Now, yesterday I was talking with Harry Loveday, our Illinois warden, and he said that he was aided all the time by the courtesy and voluntary assistance of the express companies, which always allowed him to search any suspected packages and gave all other aid in their power, cheerfully surrendering any contraband game and promising to give him all the aid in their power. It is true that some game is captured in that way, a great deal of it in the total, and it is true also that the heads of these great concerns cannot be supposed to know the contents of each box in the office, any more than the local agent can always tell what it is that he is shipping. But does anyone suppose that one-hundredth part of the illegal game shipments are ever detected? Upon the contrary, were it possible for any one day of the year to catch all the illegal game that came into Chicago, the big dealers here would be apt to experience such a shock as they have never known. Of course, the express companies can well afford to promise every aid in the enforcement of the law, but it all ends at the promise. If the warden detects a lot of illegal game, the company says: "Take it, sir. We are surprised and shocked at this awful thing!" What else cou'd be said? The company does not dare set itself up in open violation of the law. It is usually customary for a warden to sell this game and pay carriage charges out of the proceeds, so the company gets as much as though it had delivered the game to the customer. It can afford to be shocked. But it is always shocked at the consignee end of the route, and not at the consignor. It takes no means of refusing to accept the contraband game when offered. It does not want any local agent to get too brilliant, and if he does, he doesn't last. Meantime the steady stream of game, legal and illegal, flows on into the great markets—a stream of iniquity in many cases, which could be stopped in 24 hours by the honest and concerted effort of the express companies.

On this line of thought is the letter just received from Mr. W. E. Warren, of Fox Lake, Wis., who writes me:

"Your article two weeks ago about the express companies hits the bulls-eye. They are worse than the market shooters. My brother, who has been in the northern part of the State lately, tells me the slaughter of game up there was a caution. One man killed 6 deer in one day. One little station, Appolonia, shipped 500 dozen grouse this season, and Nellsville was averaging 500 a day. If the express companies would not accept this stuff for outside shipments, it would certainly make a great difference."

Oddities.

Of the oddities of truth and fiction which the season of deer hunting brings forth are the stories of a moose which was killed at St. James lumber camp, near St. Ignace, Mich., on Nov. 25, the first moose seen in that section for many years; of another white deer, killed by Mr. Andrews of Mackinaw City, near Pine River, Mich., last week; of a buck, killed near Channing, Mich., by William Warner, which buck weighed "nearly 500lbs."; of the delay in shipping game because many carcasses are in the woods, "which it is impossible to bring to the city on account of their weight." These last deer, methinks, must make the slayer of the 500lb. buck feel very small.

Big Bags.

One of the recent side-hunts is that of the lodge of Knights of Pythias, of Talmage, Neb., who on Thanksgiving Day went out in force for their annual carnival. The two sides killed 264 rabbits, 7 jack rabbits, 88 quail, 31 squirrels, 1 chicken and 1 opossum, to say nothing of 7 owls.

At Tecumseh, Neb., on Nov. 23, two parties, one of eight men, another of ten, participated in a grand side-hunt. The total of game killed was 287 rabbits, 15 jack rabbits, 1 prairie chicken and 125 quail.

At Lexington, Neb., shooters have devised a killing form of taking jack rabbits. They go out with a couple of wagons, which are driven along even with each other and about 400ft. apart, with a strong wire reaching from one to the other, which drags along over the grass and pulls out the jacks from their hiding places. Abreast of the wagon the hunters march and shoot the jacks as they start to right or left. Such a party killed a buggy load of jack rabbits the other day.

On Nov. 18 and 19, at Duckville, near Corinne, Utah, on a shooting preserve, five shooters bagged 1,493 ducks. One man shot 183 on each of the two days.

New York papers estimate that 100,000 dozen of quail were brought into New York city the morning of Nov. 1. These birds mostly come from the West.

Ice Hunting.

A novel sort of duck hunting has been practiced up on Fox Lake, Wis., since the freeze-up, that of chasing cripples on the ice. Each season a great many birds are crippled and not recovered, and of course, as the water freezes they are driven up out of their marshy hiding places and forced to disclose themselves more than is the case when they can sneak along the wet margins. Mr. D. J. Hotchkiss, of that city, writes me that Henry Grady caught twenty-three ducks that way one day, skating after them and knocking them over with a stick. A market hunter went out after the birds with a sled, which he "prodded" along over the ice with a pair of prods. At last, in his excitement, he broke through and got too wet to go on with the business. Mr. Hotchkiss also mentions the fact that an editor man from a neighboring town, Mr. Williams by name, came down to Fox Lake to see how they shot turkeys at a Thanksgiving Day shoot. He managed to get about all he shot at, at forty rods, and they barred him out, as likewise Mr. Hotchkiss, who is also an editor. You can't always tell by looking at a newspaper man whether he can shoot or not.

The Minister and the Deer.

Agent Sam Fullerton, of Minnesota, came near ruining the Thanksgiving dinner of Rev. Wm. Wilkinson, of St. Paul, last week. Some good friend of the preacher had sent him over by express the carcass of a deer, the shipping point being the celebrated community of Grand Rapids, where they have no use for game wardens. The deer got as far as St. Paul all right, but was there nabbed by the deputies of the warden, who removed it from the intended scene of activity. The reverend doctor had invited a number of friends to his house for dinner, for the purpose of eating venison, he having been advised of the shipping of the deer. The absence of the meat made a large hole in the festivities, and the minister made a loud and vigorous protest to the warden, declaring that he had not shot the deer, had never seen a deer, and was curious to know how a deer would look or taste. After a long

deliberation Mr. Fullerton good naturedly let him have his deer, and I presume the feast went on.

Figures.

A Pacific Coast paper estimates that 72,500 men in that State go shooting or fishing each year, and spend about $40 at least per man each year in the pursuit of sport. This figures $2,900,000 each year spent by the residents alone, not including the many visiting shooters and fishers who come in from all over the country. This covers only the hotel and traveling expenses, and to the estimate is added $10 per head for ammunition, etc., or $725,000 more. It pays to have something to go after by way of sport.

The Tribe of Scribes.

A number of Chicago newspaper men last summer broke away off their reservation and took a trip up into the Lake Superior country, going in near Marquette. They were so much delighted with the experience that they thought it would be a good thing to permanently corral some of that country for club purposes. A tract of sixty-one acres near Sauk's Head was secured, and the club has been set on foot, with membership fee of $25 and annual dues of $10. Opie Read, the novelist, is president of the club, and the well-known artist, W. W. Denslow, the vice-president. The temporary organization was formed last summer, but the annual meeting approaches and it is hoped that a number of good fellows will come to the front and join, not necessarily all newspaper men or artists, but anybody who loves a good summer loafing place, with good trout fishing close at hand. Opie Read says the brook trout are long as his arm, and that they swim lazily by the island in large schools. A club house will be built and there are plenty of sites for cottages along the beach or upon the island, which is one of the pieces of property. When this club gets to going there will be a sag in the shore line of Lake Superior, for there is going to be more intellect to the square foot in the immediate vicinity of Sauk's Head than has ever happened out of doors since the history of the seven wise men and the laundry yacht. It will be, in part, the Press Club of Chicago transferred to summer quarters, and it should be a pleasant place to know.

Biggest Bass.

If daily newspaper advices be correct, as very often they are not, the record on small-mouth bass has been broken badly. Press dispatches from Madison, Wis., state that on Nov. 28 Isaac Palmer, a fisherman, caught in Lake Mendota, off McBride's Point, a small-mouth bass weighing 8lbs. 10oz., measuring 24¾in. in length and 17¾in. in girth. This fish was bought by Con. Kreuz, of Madison, and will be mounted. I have seen some of these big bass from this Madison country, and they were small-mouths, as I presume this one is, but they are not marked like the river small-mouths, having a uniform leaden or yellow color. It will be interesting to know whether the details above are accurate.

St. Louis and Illinois Game.

State Warden Harry Loveday has been having fun lately with the St. Louis game dealers. As earlier mentioned in these columns, a great deal of game has been going from lower Illinois to the great St. Louis market, which is second only to Chicago in the Western country for its rapaciousness. Some of this game is shipped straight through, and is not reached by the Illinois officials, but lately it was learned that a sort of "Mr. Hicks" clearing house has been established at East St. Louis by one Geo. Heikes, and also by Broadway & Co., of that town. These men sent out word over the lower part of the State that it "would be all right" if game was shipped to them, so a large number of Southern shippers did send them game. Mr. Loveday made a little raid and captured about 2,000 quail at East St. Louis, all destined for the St. Louis market. Then the dealers of the latter town were exceeding wroth, and now declare that they will sue Mr. Loveday for breach of promise, or something awful, because he got their quail. They say it is unjust discrimination when they can't buy quail as much as Chicago does. To this Mr. Loveday has occasion to make no immediate reply. The nerve of these dealers is something Homeric. Now it is generally known that game is shipped to commission men, consigned for sale by the country shipper and not really bought by the commission man at all, who acts only as agent for the shipper, and is paid by a commission on what he sells. Those St. Louis dealers had no more title to that game that was seized than they have to the halo around the moon, and they would not have claimed title if they had had it in possession, let alone having the stuff on the wrong side of the Mississippi River and in a State which has jurisdiction over it, whereas their own State can have no jurisdiction at all. Yet they are going to sue the State warden of Illinois!

Warden Loveday this week seized 300 quail and four dozen ducks, shipped from an Illinois point to Whitcomb, a Chicago dealer. He allowed the ducks to go with the quail and raked in the whole outfit.

This taking of legal game found in the same shipment with illegal game is one which I think would be apt to raise a question of law or of construction of the law. Hitherto it has been the custom in making a seizure of illegal game to sort out any stuff that may not be contraband and notify the dealer to come and take it. Sometimes the dealer gets hot and won't take it, and sometimes he meekly comes and gets it. Really, I can see no reason why the dealer should have any benefit whatever from the shipment, nor why the shipper should have either. In Minnesota they seize the dog and gun of illegal shooters as unlawful appliances, and this measure has been found to work mighty well and promptly too. Now it is the same way with a barrel of ducks or rabbits which is filled in with illegal quail, grouse or the like. The appliance is that barrel and its contents. It is the intent to evade the law by means of that form of package. The poultry, hides, legal game or other stuff used to cover up the illegal game may in the eye of the law at least, as I am fully disposed to believe, be seized along with the contraband stuff and confiscated. At least, were I game warden, this is just what I should do. The stuff does not belong to the agent to whom it is shipped, but the shipper who sends it in. That shipper knows he has broken the law, and that he has taken steps to cover up his violations. He is mighty apt not to attempt the difficult act of coming into court with unclean hands. The more good, fat turkeys, and succulent tame ducks, and calf skins, and pieces of veal that the warden swipes, the more discouraged will be the shrewd country dealer who sews quail up in rabbits, and puts ducks and prairie chickens into calves, and heads up barrels full of stuff with hens at the ends and quail in the middle.

Ute Problem Solved.

Year after year we have been hearing of the troubles of the Colorado citizens with the Uintah Utes, who each fall come into Routt and Rio Blanco counties and make a big hunt in spite of the wardens. Last fall there was a bloody encounter, which left no better feeling between the whites and the Indians. The latter claim that they have a treaty right to hunt on these lands, which were part of their old reservation, and the worst of it is, they do still have that right. They claim that they ought to be allowed to hunt there, because white men hunt there all the time. Some 2,000,000 acres of land in that region was set apart for a timber reserve, but the red hunters cannot understand that this affects their hunting rights there, though under the law there can be no hunting on such a reserve by white men. The latter did not propose to allow red men to hunt where they could not, and there was little hope that the one side or the other would ever become less stubborn in regard to the alleged or supposed rights of the matter. Now the United States Government makes the very wise proposal to compromise the matter equitably for all concerned by purchasing the hunting rights of the tribe for a certain sum, which shall be made satisfactory to the Indians. This would be a great relief to the Colorado wardens, who have no easy task when they are asked to suppress the annual Ute inroads. It would perhaps result in bringing more white hunters and white settlers into that region, and from that time its excellence as a purely hunting precinct would no doubt steadily decline, so that the result as to the game would be pretty much the same in one case as the other. Commissioner Swan, of Colorado, is delighted at the prospect of this easy settlement of a long-mooted question. It is to be hoped that action equally wise and conservative may be taken in all these Western sections where the situation as to these game wars is more or less similar to that of the district mentioned. It is bad for the white hunters to be driven out, or for white settlers to be disturbed, but it is likely that in very many instances the Indians believe they are doing what they have been told by the Great Father they have a right to do. They do not always think just as clearly as we do, and their mode of life is different from ours; though perhaps it is asking too much of a red hot mountain man to stop to figure on that sort of thing when he sees a bunch of Indians coming in on his range and promising to run him out of what he also thinks is his own country.

From the Blackfeet.

I have a recent letter from the Blackfeet reservation from Mr. J. W. Schultz, who says that the big game of that country is getting a pretty bad shaking up since the mining began. He brings the bad news that Billy Jackson, who was seen by very many friends at New York some time ago at the sportsmen's exposition, continues in very precarious health, and is unable to get about very much. I hope this news may not be true, or not permanently true, for Billy Jackson is one of the rarest of good fellows, and deserves nothing but good health and happiness. It is a liberal education to camp with Billy and hear him tell about the old times.

Mr. Schultz writes that he saw a good deal of Charlie Russell at Great Falls, Mont., on a late visit over there, and he adds that Russell is "wasting his talent painting pictures of Indians and cowboys out there, for they want to buy pictures by the yard at Great Falls." That is no good way to sell pictures, and if Mr. Russell will come on to Chicago or New York I reckon some of us might take him around to places where they trade on a different basis. I don't know that he would like to live very long in the East, but he might stand it for a time. There is one thing about Mr. Russell and his work that any real Western man can't help liking, and that is the fact that he is doing his work out of his own love for it and his actual knowledge of it. Most of the popular pictorial ideas about the West come from men who do not live in the West, but who visit it purposely to get posted about it. These must always be at a certain disadvantage to the artist who is, as it were, upon the spot. Yet, though one gathers eggs in the barn where they are laid, he can best sell them in the store where they are bought. I first saw one of Mr. Russell's paintings in a shop window at Butte, so I always thought I knew him, though come to think of it, I believe I never met him.

Yet another bit of news from the Blackfeet country came to-day by way of Mr. Charles H. Cobb, who paid this office a visit. Mr. Cobb is son-in-law of Capt. T. P. Fuller, Indian agent for the Blackfeet, and is just back from a fall hunt in the St. Mary's country, on which he got both sheep and goats. He also saw Billy Jackson, and he says Billy is pretty sick, but he thought not dangerously so. He brings word from our old-time host, Joe Kipp, and other reservation acquaintances, and says that all is well out there. Mr. Cobb himself lives at Kankakee, Ill., but is much at the reservation in Montana, which is a truly delightful place to visit.

Otter.

I was in at a furrier's the other day, getting my sealskin overcoat repaired, when I chanced to see a big pile of nice otter skins, dressed and plucked. They were fairly good skins, though not so dark as some of our Northern fur. I asked where most of the otter came from, and was told that it was from the Southwest, and also from Alabama and Georgia, with some from Arkansas. This, I imagine, is news to the average sportsman. If you ask any trapper or traveler where there are plenty of otter, he will not be able to tell you. I never saw a place yet where there were many of these slippery beasts, which seem to be scattered all over the country, without very many in any one place. There are a few, and very fine ones they are too, for the most part, in upper Wisconsin, but the trapper who gets three otter in a winter there is about two or three otter ahead of the average.

Good Trio.

I had two old-timers and an explorer in my office today, and they made a good trio. Mr. Edward Kemeys, of Chicago, the well-known sculptor, met there Buffalo Jones, and they two were able to exchange many pleasant reminiscences about the old buffalo days in Kansas, where they both hunted in the early seventies. They knew that country like a book, and had a good time together. Mr. Kemeys is very much devoted to the wolf, the big gray wolf, and when Jones began to tell about some of his wolf experiences in the arctic trip, from which he has recently returned (as mentioned in these columns), it was as much as one could do to keep both gentlemen on their chairs, they were that happy, talking wolf.

My explorer was my old friend Charlie Norris, with whom I used to go trout fishing and snowshoeing up in Wisconsin in former years. Charlie has been off hunting gold, taking the "backdoor route" to the Klondike, for which promising region he started a year ago. He never got to the headwaters of the Pelly River, but he thinks perhaps his partner has by this time. Charlie was separated from the rest of his party and robbed by some fellows he met on the trail, and so forced to turn back from his journey up the Peace River. He made him a raft and ran the Peace alone, rapids and all, till he finally wound up in Athabasca Lake and thence got the chance to work his way back to Edmonton. Naturally I wanted to give the FOREST AND STREAM a story of this little trip, which not very many men have made or ever could make, and this he has promised to do at an early date. It was something of an undertaking to start out in the dead of winter from Edmonton, with a party of tenderfeet and with a train of horse sledges, to go over an unknown trail into a country which nobody had ever seen. Mr. Norris found that the maps were not maps, and the information not information, but guesswork, and he can tell a pretty story about the far-away land of fur and frost.

Roping a White Goat.

It is rather a startling, but not an impossible nor an unplausible story, which comes from the Cowlitz River country of far-off Washington this week, recounting the capture alive of a white mountain goat. It seems that Edward Dickson was the man lucky enough to perform this rather unusual feat of roping a wild goat. He was riding through the mountains, horseback, accompanied by his dog, and heard the latter barking on ahead a little way. He rode up and found the dog engaged in attacking or repelling the attack of a white goat, which had the dog at a disadvantage in the snow. Dickson hurriedly took the rope from his saddle, and going in close succeeded in roping the goat, which he tied up to a tree; though not without something of a tussle. He got help later, and tried to take away the animal, but it fought everything in sight and refused to go. The men at last tied his feet together and wound his horns round with gunny sacks, thus finally getting the creature away to the nearest house, where it was left at last accounts. Dickson was caught in the arm by one of the horns of the goat, and somewhat hurt.

All this might sound like a fairy tale, did it not so strictly accord with the description and habits of the white goat. The horns of this animal are described to be "black as jet," and "he uses them with great dexterity." The story says the goat "is white as snow, and has a high crest or mane between his shoulders." All this tallies with the white goat as the hunters of the Rockies know it. When I was out in the Blackfoot country after goats the hunters out there said that it was never customary to let a dog attack a white goat, because the goat would nearly always kill the dog. I think I mentioned the story told by Mr. J. W. Schultz, of a hunter who once climbed a mountain plateau where a big billy was lying, and who was a bit surprised to see the goat come at him instead of running away. All this is quite in line with what little experience I had with these odd and misfit creatures. Both the goats I shot had plenty of chance to get away, for they saw me, I should think, before I did them, yet neither of them made any attempt to get off, but seemed too lazy or too stupid. The hunters call them the biggest fool thing that runs the mountains, and do not care to hunt them. I am disposed to think that Dickson did rope a goat, and it is pleasant to add that the animal seems to be doing well at the mountain ranch, and eats and drinks as though it were not much bothered about the future. If you are looking for a philosopher, you can find him in the mountain billy, a cheerful, optimistic philosopher, who believes that it is all going to come out for the best, who would not run to get away from anything, and whose dignity can't be jarred by anything short of a .30-30, and maybe two or three of that.

The Master of the Herd.

If one wanted to get a typically grand buffalo bull head for a picture, he ought to get that of old "John L. Sullivan," the finest and most pugnacious bull of the old Jones buffalo herd, which was sold to Charlie Allard, of the Flathead reservation in Montana. There are several photographs of this old fellow, and he is still alive. He has never been tamed and never been whipped. I remember this bull very well, that is to say, I remember him as he was in his infancy. This was one of the calves which we caught in the 1886 hunt in the Texas Panhandle. He was the largest of the lot, a stocky, sturdy, big-boned fellow. That was the calf we had to feed out of a certain white pail. He would not eat out of anything else. He was savage even then, and butted over every man that came near him. I remember very well the run on which he was caught, and how we carried him half in our arms in the front seat of the light wagon. He was a fighter from the start. Later he developed into a tremendous specimen. His horns measure over 20in. around the butt, and his topknot is a spreading mass of wool. In stature he is a giant among his kind. Always vicious, he once chased and nearly killed Jones in the pasture. Jones got a shotgun and shot him in the face, thinking to tame him and cure him of his viciousness. The charge destroyed one eye of the bull, but he scorned to run. He was then shot in the nose and lips, a heavy load of duck shot striking

him, but he still stood his ground. He has never been subdued and is a fighter of the worst sort.

A tragic interest attaches to this wandering story of a real master of the herd. "You remember old Queen, our Kentucky running mare, the one with which we caught most of the calves, don't you?" asked Buffalo Jones. "Well, that old bull John L. killed Queen, the very horse which carried me up when I roped him. The mare was always allowed to run free in the buffalo pasture. We had turned her out and resolved never to work her at anything again. One day, so I am told, though I was not there, Queen came too near to this mean bull, John L. The bull made a rip at her with his horn, and caught her fair in the side, tearing open the flank. He lifted her fairly up into the air and she came down dead. The bull had killed the horse that caught him."

This news about the gallant mare, which won our love on the hunt above mentioned, comes, even now, thus late, with a good deal of sadness. Queen was a noble animal, and worthy a better death. The day we gave her whisky and rubbed her for hours and nursed her till she got her sight back and recovered from a trip of 200 miles without water, and running buffalo, we had this same little calf on the rope close to us. If we had had any notion that he would ever have lived to kill Queen we would have killed him right there, valuable as he was.

Changes in Illinois Law.

Warden Loveday has in mind a number of changes in the game laws, which, after carefully weighing, he will have embodied in a bill and endeavor to have properly presented at the coming session of the Legislature. Last session there were many different and conflicting measures. He thinks it would not be surprising if an entirely new game law were enacted. He is in favor of a gun license. A number of petitions have been put in circulation looking toward changes in the law, and I understand that a meeting of interested parties, not belonging solely to any of our protective associations, will be held at the office of the warden, Schiller Building, Chicago, probably on Monday evening next. E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Ring-necked Pheasants in New Jersey.

[From the Report of the Fish and Game Commission.]

From Mr. John B. Lozier, Oradell, Sept. 15, 1898: The pheasants have stopped all summer in my vineyard and about the shrubbery on the lawns. I could hear the cocks crow every morning during the mating season. We flushed eight or ten young birds several times; whether they were the same covey every time or not I cannot say. At any rate the prospects are bright, and if we can only keep the people who hunt in the snow away they will pull through all right. Our seasons for shooting, as you know, are wrong, and the only way to save any game is through the trespass law. Of course the farmers get plenty of abuse, because every pot-hunter can hunt, but I guess they can stand it. I wish special efforts would be made to introduce the pheasants. Our county is their ideal. They seem very partial to meadows and the edges of brush lots, and are very prolific if not disturbed too much. Revise the game laws next year and attach good penalties.

From Assemblyman Charles F. Hopkins, Boonton, Sept. 19, 1898: The pheasants are doing well. After finding that trying to hatch them enclosed was a failure, we let them go, and they are hatching, and have done so finely. They seem to do well, and remain about us yet.

From Fish and Game Warden William G. Wise, Burlington, Sept. 20, 1898: The ring-necked pheasants recently put out in this county have done well. I know of one instance where a farmer, while mowing his grain, saw a large bird get up and fly from under the machine and into an adjoining field. The next day he mowed that field and found that bird dead, as it had been injured while sitting on her nest of eggs. The latter were also subsequently found.

From Mr. A. M. Gillam, South Vineland, Sept. 21, 1898: Ring-necked pheasants will never thrive and multiply in New Jersey unless given two or three years' protection. They are too nearly domesticated to look out for themselves in the shooting season the first year after liberation, and can be exterminated by almost any kind of a pot-hunter. These are my conclusions, drawn from experience with the twelve birds I got from you last March. I released nine, in trios and in three different places, keeping three, a cock and two hens, in captivity. Three of those released—two cocks and one hen—came back in the course of time, and the hen, after literally wearing a pathway along the side of the wire inclosure in which the captives were confined, was finally allowed to go in; but two weeks later was thrown out again. She continued to hang around the place with one of the outside cocks, both eating with the ordinary barnyard fowl, until she hatched out young ones, when the hen disappeared.

The hens in captivity had about 100 eggs. I set forty-one under two ordinary hens and hatched out thirty-eight. One of the pheasant hens set in captivity on eleven eggs and hatched ten. Forty of the chicks grew to be about as large as quail, when most of them got weak in the legs all at once. I shut off on hard boiled eggs and bread crumbs and fed more strengthening food. Most of them recovered, but some legs never straightened, and I destroyed the chicks thus afflicted. Thirty grew up past dying age—at least I thought so until one day in very warm weather six died, apparently of cholera.

Six hatched by the pheasant hen came through all right, and as they had never been handled in any way they were comparatively shy, and I released them. The others will chase a man instead of running away from him, and there would be little use of turning them out, for any one could kill them with a stick. The pheasant hen that hatched in captivity died in August. Overfeeding, I imagine, for she was very fat. I gave a neighbor who thought he knew all about pheasants twenty eggs. He hatched thirteen, but all died young.

Of the nine old birds put out I cannot give either as good or as thorough a report as I would like to. Want of time and the very warm weather have kept me out of the woods. I have never been near one trio. The other two trios got together and for half the summer the two cocks walked about together, ranging for half a mile or so. They raided on berry patches and occasionally fought. The hens, I concluded, were setting.

Then one cock came back to the pen and spent all his time fighting the cock in captivity. Finally the outside cock was found dead, half a mile away, but with no marks on him. One pheasant hen was seen walking about with two chicks; another had a dozen or so, and a third about half a dozen. The fourth of this bunch apparently did not hatch out. How many of these three broods grew up I cannot say, but I fear not many, for the signs are scarce. I took quite a long trip with my pointer dog recently, and found but four—one old hen and three nearly grown young ones. I suspect farmers' boys killed some in retaliation for stolen strawberries. I fear this section has too many small owners for the good health of such domestic and impudent birds. When feeding it is difficult to frighten them away. There should be more grain fields and fewer berry patches. It is an ideal quail country, but I am forced to admit that it is not perfect for ring-necked pheasants, at least unless the birds are given time to become acquainted with their surroundings before being made game. I am sorry they could not have three years' protection.

From Mr. Charles M. Freeman, Metuchen, Sept. 23, 1898: As to the English pheasants, from those sent me there are now about thirty healthy young birds, and if they winter well I think they will multiply rapidly.

From Mr. George Ricardo, Hackensack, Sept. 24, 1898: The pheasants are hard to locate, as the only information to be had is that obtained from farmers. If gunners know where there are any birds they a e keeping it to themselves. There are two small broods on the farm of Mr. John B. Lozier and there is one on the farm of Mrs. S. J. Hopper. There were two nests in one field on the Spring Valley road. The only nest I have heard of from the Westwood birds had nine eggs in it, but was destroyed by some animal. The birds at Paramus and Englewood have been seen a number of times, but I cannot ascertain whether they have bred or not.

The Pawling Club's Plan.

SING SING, N. Y., Dec. 3.—*Editor Forest and Stream:* If all gun clubs throughout New York State were as progressive as the Pawling Rod and Gun Club, good shooting would be assured for years to come. Having been fortunate enough to be the guest of a member of the club this fall, I was enabled to see what really could be done in the propagation of game birds with a little public-spirited enterprise. We flushed seven coveys of quail in one morning—aggregating eighty birds. We picked out a few old birds, sparing the younger ones.

The club has purchased the shooting rights of most of the farms in the vicinity of Pawling, so the members are protected in a measure from non-resident sportsmen. The proceeds of the "clay bird tournament" held there are used for the purchasing of quail and pheasants. From 200 to 400 birds are turned loose each year. Shooters at the traps who are sportsmen will appreciate this fact, and even if they do not quite reach the winning percentage, will "fork over" with a certain amount of satisfaction in knowing their money is going for a good cause. Quail are uncertain birds—shooting grounds within a radius of ten miles are replenished by this annual distribution.

CHAS. G. BLANDFORD.

North Carolina Quail.

NEW YORK, Nov. 30.—Having just returned from a quail shooting trip in North Carolina, I can recommend to those of your readers who are interested a visit to Hamilton, Martin county, N. C. They will find many birds, dogs, and at Mr. S. W. Everitt's a pleasant host and hostess, very reasonable rates of board, and an easy country to shoot over. This letter was not solicited by Mr. Everitt. J. E. HINDON HYDE.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Lake George Bass Experience.

Editor Forest and Stream:

You invite descriptions of shooting and fishing trips; and as I am tied up in the house with a bad (or good) cold, taken from a wet sneak-box in Chesapeake Bay, I am inclined to comply, provided that a little black field spaniel will let my slippers alone and not pull me from my chair. I sit in my den facing the cabinet, which contains my four shotguns and five rifles and the various accumulations of a sportsman. The various equipments still give out the pungent odor of a beechwood campfire in the Adirondacks. On the walls hang the trophies of many a hunt, and which recall many a lame back, sore foot and barked shin, but it was all manly pleasure and one does not regret the pain or expense. Better spend your surplus cash that way than in silly attempts to be one of the boys.

Under the circumstances it is not strange that one's thoughts revert to pleasant trips in the past, and that I am anxious to get rid of this cold, that I may catch another before the season is over. To get back to the original intention of a brief account of part of this season's sport, let me state that the same sawbones and pill peddler who is dosing me now induced me to take a trip to Lake George bass fishing in August. We arrived at the Hundred Island House Sunday noon. It rained Monday, and we fished off the dock. The Doctor read a prize essay on alcoholic gastritis in the evening, interspersed with comments on the conductive circumstances which lead to the disease. My mind was more taken up with the loss of four leaders and as many snelled hooks and one bass. We mutually decided to avoid the docks and bars and devote the rest of the week to deep water.

We engaged a steam launch from Bolton and started up the lake, with tow-headed Theodore Ormsby towing behind. Said Ormsby will beat you out on a swap, but he can fish and knows the lake. Ormsby and the Doctor took the small boat and anchored off the ledge near Black Mountain. Three crickets for bait on a No. 1 sproat hook; no lead, plenty of line out, and in ten minutes a strike that would make your heart thump. The fly-rod takes its finest curve and the reel shrieks; there is much guesswork and the final result doubtful; therein lies the sport. Thirty feet away the water breaks and the rod straightens as line is given. The reel sings again and history repeats itself. A 2lb. small-mouth bass comes to net as No. 1. The Doctor and Ormsby come in for lunch, and with them four fine black bass, one 3½lbs., two 2lbs., one 5½lbs. The captain of the launch gets a 3¾lb. beauty in the afternoon with his cane pole and chalk line, and I get left with my thirty-dollar Leonard rod and silk line. The day ends with 37½lbs. of bass. I never knew of an Oswego bass being taken from Lake George. They are all small-mouthed, and the best bait for them is crickets or grasshoppers. A resume of the day's sport leads me to believe that bass hooked in the lips will be sure to break water; and if the bait is gorged and the hook is fast deep in the fish, you will not see him till he is ready for the net.

Second day. The launch is on hand at 8 A. M., and as the Doctor's wife has arrived, we cruise in the northwest bay and visit Paradise Bay before fishing. Lake George is a beauty spot. Others have described it, and have done it well, I can only add that should I have the choice of a place of drowning I should select Lake George. In and out among the islands, with steam occasionally stopping to try some inviting spot, we finally anchor near the scene of yesterday's sport, and the Doctor is king pin again. He lands a 5lb. bass from the steamer before Ormsby and I are fairly in the boat, and upon our return he has another 4¼lbs. Ormsby has one of 3 and one of 3¾. I have one of 2lbs. and am beaten by the Doctor's wife with one of 2¾. She can handle a fly-rod with a bass attached as well as Dr. Henshall. Further, she can step in the center of a boat and sit still after getting there. The skipper gets in his work again with the bean-pole and chalk line. There were some lost, but the net weight for the day was 27¾lbs.

The third day we used small boats, with indifferent luck. The laugh was on me for taking a 4lb. eel, believing that I had an immense bass. The eel swallowed the hook to the extent of having the union of snell and leader out of sight. I became discouraged in endeavoring to extract the hook. The Doctor suggested that I cut off the eel's tail and pull the hook through the other way. This worked beautifully. I was highly pleased, and the Doctor noticed it and remarked: "You have a queer face—one-half of it shows appreciation, the other half shows astonishment that a disciple of Esculapius should comprehend the anatomy of other animate formations than that of the genus homo." I understood well enough that he was making fun of me and calling me names. I have not fished with him since. He still continues his professional visits, but pays more attention to my fly-rod than to his clinical thermometer. I still owe him a grudge and a bill: the first will be paid—the latter never. I expect some day he will put me to sleep with his nasty dope, and if I wake up I shall find the rod missing.

The Lake George guides charge you three dollars per day, keep all your fish and whatever tackle they borrow from you. W. W. HASTINGS.

Piscatoribus Sacrum.

I HAVE a little red book—a storehouse for reminiscences; it is devoted to angling and such subjects as are dear to the angler, and I call it "Piscatoribus Sacrum." Though it cannot claim, as does a certain famous book, to be "not unworthy the perusal of most anglers," yet it contains many odds and ends, among which it is always interesting to pick about; and when I am far from a trout stream, and yet long to hear the babbling water and to cast a fly again in the old familiar corner, I often pick up my little red notebook and retire in fancy to some distant scene of rural beauty and rising trout, there to linger awhile in an angler's paradise. I have often thought that every angler ought to keep an informal diary.

How many people, I wonder, tie their own flies nowadays? When I read the elaborate directions given by such masters of the craft as Detached Badger, I find myself wondering how any one has the time, the patience, or the eyesight, not to mention the fingers. I have no doubt that he has succeeded in stimulating the desire of many, and in inspiring the desire into more, to dress their own flies. But I suspect that, when artificial flies can be bought so beautifully made, and at such reasonable prices as they can be to-day, few amateurs find it worth their while to dress them for themselves. I have always been immensely tickled by Ephemera's parting cast in his edition of "The Complete Angler": "He who shall not be able to make a trout fly, after studying these diagrams and directions, must be deficient either in brains or in manual dexterity." But that was penned before the days of higher education, when trout were less particular. Indeed, there are many streams now, I do not say chalk streams, where the trout prefer the rougher kinds of flies, and where neatness of finish is not always by any means an advantage.

From flies to postage stamps may seem a wide jump, but, opening at random, I have come across a Portuguese stamp issued in 1895 to commemorate the festival of St. Anthony. The saint is depicted standing by the edge of the water preaching to the fish, which listen with eager noses thrust out of the water, just as if they were "smutting" on a warm evening in August. Again, proverbs are a great source of comfort to many people. They so often save them the trouble of thinking, the

necessity of making an original remark. "When the wind is in the north," murmurs the disappointed angler with resignation, as he returns home with his basket empty. Others have collected all the proverbs of all nations and languages that relate to angling. Many proverbs can be parodied to suit the angler. For example: "A bright day makes a light bag," "The empty creel is the mother of invention," "Spare the rod and lose the fish," "The wise fish discerns the gut, but the foolish takes the first that comes."

Fishermen's Curses would supply a heading for an interesting and suggestive chapter. By this I do not mean a list of the expletives, profane or picturesque, by which the angler relieves his feelings when he is exceptionally annoyed. The gentle angler is never so forgetful of the dignity of the craft. But I refer to the various sources of annoyance which from time to time try the patience of every angler. Even these have their compensation, however, for it is seldom that they are not graphically reproduced to raise a laugh in the smoking room after dinner. The wasp's nest in the favorite corner will occur to many fishermen. I recollect how a friend crept up one summer evening to drop a fly unseen into such a corner in a Lincolnshire Beck; how he took up his position over a nest of unusually virulent wasps, and a very painful scene ensued, in which he was routed with considerable loss. Indeed there would seem to be room for a book somewhat similar to Mr. Lehman's "Hints to Young Shooters," explaining how much capital may be made over the pipes and grog out of the vicious bull in the meadow by the riverside; the man who keeps a mill for the special annoyance of trout and anglers; or the man who cuts his weeds and floats them down with such subtle irony when the May-fly is at its best. But to my mind nothing taxes the patience so much as the old black trout who devastates the stream, lies like a log in his own special spot, can always be found and never be tempted to rise, and is only to be got rid of by netting.

"The bull in the meadow," however, has been used with advantage on at least one occasion. When anybody could buy a day ticket for the Wye, which flows below Bakewell, past Haddon Hall, down to Rowsley, fishermen got so thick upon the bank that one of the riparian owners invented a *deus ex machina*, and sprang it upon them. He put a particularly savage bull in the field one morning, and a late riser sallying forth after his friends from the Peacock met them all returning in various stages of wetness and discomfiture.—Chelidon, London Field.

An Italian Fishing Method.

An Italian officer, Major Michelini, who has been investigating the qualities of bullets and rifles, has discovered that fish can be killed more easily than even by the dynamite cartridge. The Italian rifle, which is about .256in. in caliber, proved very deficient in stopping power at the battle of Adowa. Nevertheless, at short ranges the very high velocity of the bullet gives rise to a powerful explosive effect. Major Michelini one day fired one of these guns into the water at an angle of about 45 degrees. A dead fish almost immediately rose to the surface. On examination no wound was discoverable in the body, the death being due entirely to the hydraulic shock arising from the impact of the bullet with the water. This view was amply confirmed by further experiments, and many fish were killed by the blow of the bullet on the water exactly as if by an explosion of a dynamite shell. The effects of the hydraulic shock seemed to be sufficient to kill all the fish within from 2 to 2½ft. of the point of impact.—*New York Times.*

PRIZES FOR AMATEUR PHOTOGRAPHS.

The Forest and Stream offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to Forest and Stream's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the Forest and Stream.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

"Stales."

Editor Forest and Stream:

The writer of a column-long report in the Sunday Sun about recent duck shooting near Harvey Cedars, Barnegat Bay, N. J., speaks of putting out "the stales," meaning the decoys. Since when has stale (an obsolete word according to Webster) come into use along the Jersey coast? I never heard it used there, or anywhere else, for that matter. Stool or decoy is the word employed in general, though a good old negro gunner on the James River used to speak of "settin' out de toys." K.

FIELD TRIALS.

1899.

Jan. 16.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y.

Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

Missouri State Sportsmen's Trials.

Amoret, Mo., Nov. 30.—The Missouri State Sportsmen's Club held their second trials commencing Monday, Nov. 28. There were a great many very enthusiastic lovers of the dog and gun in attendance from St. Louis, Kansas City, Sedalia, Moberly and other parts of the State, the attendance being larger than usually seen at the older clubs. The grounds were good, large open spaces and any kind of cover to test the qualities of a bird dog. The essential, however, to all trials, birds, were quite scarce, and several heats had to be decided reluctantly without dogs being given a chance on game. The weather was not good on Monday morning, a fine mist with considerable snow already on the ground. The mist ceased and the snow disappeared, and the sun was out by noon.

The Members' Derby.

Miss Schley, a seven-months-old pointer, the youngest we ever saw run in a field trial, ran with Lady Floss, a setter. Were put down at 9:15 and ran a half-hour. The weather conditions were such no birds were on the move. While both dogs ranged well and had fair speed, no birds were raised by horsemen and wagon that were numerous, nor pointed by the dogs. The setter having the best in speed and range, though the baby pointer ran exceptionally well for one so young.

King's Rod, a setter, was drawn to run against Peg's Girl, who proved sick and did not start—Cora Gladstone, a setter, taking her place. Rod was a very fast dog and a wide ranger. Cora was good in speed, and ranged fairly well for the heavy cover they were hunted in. Cora pointed two bevies in good style, and one single bird. Rod flushing one bevy that Cora was pointing, and would not respond to whistle, and ranged at will. They ran from 9:45 to 10:26.

Dot's Jingo, a pointer, was drawn to run with Sport's Gath, a setter. The birds were moving some now, and both dogs pointed at same time on a bevy that was feeding. Birds flushed and both dogs steady. Each dog scored some points on the scattered birds. The grounds proving blank when the dogs were hunting, they were taken to work on bevy horsemen flushed, but the birds were not raised again. They were about equal in speed and range. Down from 10:26 to 11.

Klondike Kate failed to appear. Cora Gladstone, her running mate, went with King's Rod as already stated.

Minnie Southworth and Mish were the next brace down, and ran from 10:25 to 11. They did not find any birds, and their speed and range were such the judges were of the opinion they could not win, admitting they would point, and were spotted out. Rap's G. and Rap's Rod, two pointers, were the next brace down, and ran from 11 to 11:45. They failed to find any birds. Rap's Rod was thought good enough to go into second series.

Second Series.

The first brace in second series was Lady Floss and Cora Gladstone. They were evenly matched in speed, Cora having some advantages in range. No birds were found by dogs or flushed by the many horsemen. Floss was suffering from effects of cut on foreleg, made by barbed wire.

King's Rod and Dot's Jingo were second brace. Jingo improved in range and speed, being down with one of the fastest and widest rangers in the trials. Jingo made two bevy points, and a point on single bird or two. Rod stopped long enough to satisfy himself birds were near, and jumped onto them, flushed and chased.

Sport's Gath and Rap's Rod were the third brace called. Gath found a bevy, which he pointed nicely across a creek. Steady to flush. On the scattered birds he made three or four points, Rod failing to score.

The judges announced Dot's Jingo first, King's Rod second, Sport's Gath and Lady Floss third. The placing of Rod second we take exception to, as Rod did not improve his opportunities, and he had several to point; he would not back, and would only stop on game long enough to be sure it was there, flush and chase; could not be handled and hunted at will.

We think Cora Gladstone, who had committed no faults, improved all the opportunities to point she had, and was at least Lady Floss' equal in speed, range and style, should have been placed over Floss, who did not point a bird—true, none were found when she ran.

The judges in the Members' Derby were P. T. Madison, Dr. Higgerson and Mr. Baldwin.

Members' Open Stake.

The Members' Open Stake was the second stake run, and commenced Tuesday morning. The day was bright and clear, fine overhead, but frozen hard and frosty underfoot. St. Cloud and Lady Webster were the first brace down at 8:30. The dogs started away at a clipping pace that Lady kept up to the end. St. Cloud died away in speed and range, and toward the last would stop and nose more than an aged dog should do. Lady had an easy way of going, and hunted with rare good judgment, and carried a high head. She did not put her nose to the ground during the several heats she ran. The brace beat out the ground thoroughly, but no birds were seen during the forty-five minutes they ran.

Sport's Gath—Dot's Jingo were called at 9:20, and ran until 10:35. Sport's Gath pointed a bevy in corn, and made two points on the flush bevy, Jingo failing to score. Jingo had some advantage in range. Their speed was about equal.

Jim P. and Kate Rigo ran from 10:37 to 11:17. Jim scored a couple of points on single bevies in the corn, but would only hold his birds until his handler would get in shooting distance, when he would jump and flush; he had been used to do this in shooting over him. Kate made a point on a single her handler caught in the grass. Each dog made another point on birds flushed by horsemen. Neither had much speed. Jim fair range. Both were spotted out after first series.

Sport and Kansas City Kent were the next brace. Kent was the winner of this stake last year. Kent had good speed and range. Much the advantage over Sport. Kent made a point on a single bird in corn, and pointed and then flushed a single bird soon afterward.

After lunch, which followed this brace, King's Rod, who was the bye dog, was put down, and Dot's Jingo was put down with him to see if the latter was good enough to be continued further. Jingo improved on his first heat and ranged better; had more speed and worked his birds. He found and pointed a bevy in good style, and would have pointed others, but Rod would flush the birds in front of Jingo and chase them, putting up two bevies and several single birds, retiring himself.

Second Series.

St. Cloud and Sport's Gath were the first brace in the second series. No birds were found by the brace. St. Cloud died away in speed and pottered so much he was not taken into money.

Lady Webster and Kansas City Kent were the second brace in the second series. They met in same stake last year. Lady having only one part of day in field before she ran, and no other conditioning, and was too fat and soft, Kent defeated her. They proved to be the best brace that had appeared up to this time. Both were good in speed, Lady being the fastest, widest ranger and most constant worker, and carried the highest head. Kent coming down a hedge row ran into and flushed a bevy with conditions favorable for a point. Lady pointed a bevy that was widely scattered, that was feeding, scoring several points on different birds, Kent coming up to back, which he did, joined in the work, scoring one point and one flush.

The judges announced Lady Webster first, Kansas City Kent second, Sport's Gath and Jingo equal third.

Lady Webster is a handsome setter bitch, six years old, and has been used as a shooting dog. She showed from her race in this heat and subsequent heats she is fit to class with Sue, Bohemian Girl and Lillian, and the best setter bitches starting in field trials. Kansas City Kent is a big pointer and has much pointer character, and is a good field dog. Sport's Gath is a handsome young setter, by Marie's Sport. Jingo, a young pointer, and will be heard from in future trials if he lives and nothing occurs to him.

Open Derby.

The Open Derby was then taken up, Rod's Pansy and King's Rod being the first brace. Pansy made a point on bevy, and one or two points on single birds. Has fine speed and range, and improves all opportunities to point. Rod repeated his previous bad work and was retired.

Rodfield Gladstone and Lady Floss were the next brace. They both ranged well, and pointed where birds had flown from, but nothing was flushed, ending the running Tuesday.

Wednesday we woke up with a snowstorm raging. Waiting until 9, the dogs were ordered out and the cavalcade of horsemen took up the line of march to the wet fields, expecting to do little if any work on game; but the unexpected happened, and seven bevies were flushed in two hours, as many bevies as found in all the previous heats.

Florence Rodstone, the bye dog, was put down with Rod's Pansy, making third brace in Open Derby. They both ranged well, Pansy pointing a bevy still on the roost. The judges riding up another bevy close by. The dogs were worked on the singles of one of the flushed bevies, Pansy making an excusable flush down wind. Florence ranged well and hunted with good judgment, but did not score a point. The judges gave Rod's Pansy first. She is a very fine puppy; has splendid speed, range and judgment, having won first in Derby at Bickwell, Ind., this year.

Florence Rodstone is a big handsome bitch, with splendid speed, range and judgment, and will be heard from again should she stand next season. Lady Floss, third, is a small bitch with plenty of snap, like her sire and dam, while she was unfortunate in not being on game. No birds were seen in any of her heats. Rodstone is a handsome young dog, and ought to go on.

The snowstorm and scarcity of birds reduced the starters in the Open All-Age Stake to four dogs.

White Line and Rodfield's Boy were the first brace to face the judges. The Boy is a dog that hunts on straight lines and ranges largely at will, has good speed. He did not improve his chances to point game, and failed to score a point in this heat. White Line has good speed and hunts to the gun, has good nose, and handled his game well; ranges with judgment, finding a bevy in good style and several single birds in this heat.

Lady Webster and Sport's Belle were the second brace in this stake. Lady, although handled by a man she never saw before (Lady's owner, who handled her in first heat only, having to leave), ranged with splendid judgment, handled her birds well, committing no fault during a series of four heats, meeting winners in every heat she competed in, and doing a remarkable feat, running over dog pointers she met, except the one point Kent made on bevy she had found, he pointing while she was tied, holding point until her handler could come up and flush. She pointed a bevy in heat with Sports Belle. Following the flushed bevy, she made three or four points on singles. Belle was evidently off nose, as she is strong on point work.

(The Derby entries Rodstone and Florence Rodstone were called on to run, while Lady Webster had a short rest, to see how they would work game. Nothing was found by either dog. Rodstone dropped much in speed from yesterday's going. Florence increasing hers over the first she ran in morning).

Second Series Open Stake.

Lady Webster and White Line ran a heat. Lady finding a bevy that was not followed.

Sport's Belle—Rodfield's Boy ran a heat, but nothing was found. Lady Webster was placed first, White Line second, Sport's Belle third, Rodfield's Boy fourth.

P. H. Bryson.

The Irish Wolf Dog.

Editor Forest and Stream:

An interesting monograph on the Irish wolf dog, from the pen of Rev. Edmund Hogan, S. J., was published last year by M. H. Gill & Son, of Dublin, and a copy came into my possession. Any person who desires to obtain information about this greatest of all dogs will find the book a repository of about all that is knwn regarding the acknowledged "king of the canine race." The author evidently wrote the work as a labor of love, for although the volume is not too large to be carried in one's pocket, it contains a multitude of references to the Irish dog, both prose and verse, from writers as far apart as Quintus Aurelius Symmachas, a Roman consul in the year 391, and Captain George Augustus Graham, of Redneck, England, who wrote in 1885. All the evidence adduced indicates that the wolf dog was nearly as much superior in size and majesty of aspect to ordinary dogs as the extinct Irish elk must have been to any survivor of the deer family. As horns of the Irish elk have been found measuring 12ft. across, their owner was evidently built on generous lines, and it would seem that the dogs that may have been employed by the prehistoric inhabitants of the Emerald Isle, to chase the gigantic elk of those days, were correspondingly greater than any now in existence. Perhaps some of the peat bogs will yet give up a skeleton of the wolf dog that will enable the naturalists to determine the exact proportions of the animal and set at rest a point that has been so fruitful of controversy and so unsatisfactory in results. The writers are nearly unanimous in picturing the wolf dog as resembling the modern greyhound in form, but possessing a wiry, rough coat. White was the favorite color, but some famous dogs were black or black and white, and others cinnamon.

It is doubtful if any specimen of the real wolf dog is now in existence. Some containing strains of the blood are probably to be found, and the creature appears to have been such a noble one that modern fanciers who are endeavoring to revive the race deserve every encouragement. Father Hogan's book contains several allusions to the wolf dog in this country, and one passage in particular is worth quoting. On page 75 he says: "In 1838 two Irish wolf dogs were sent from England to Mr. Sibley, of Fort Snelling, in the United States; they were of brindle color, short hair, much larger and heavier than the deerhound, while equally fleet. Others of the breed have been seen at intervals in the United States."

Could not Charles Hallock or some of the elder sportsmen who used to write for Porter's Spirit of the Times give some recollections of those two dogs imported by Mr. Sibley. The latter was beyond a doubt General Henry Sibley, of Fort Snelling (now Minneapolis), who as "Hal a Dakotah" write sketches relating to his sporting experience in the Northwest, in Porter's Spirit of the Times, and if I remember rightly, for FOREST AND STREAM in early days. Who knows but that the General's dogs may have been descendants from the kennel of Oisin, who said to St. Patrick: "To the son of Cumall and the chiefs of the Fiann it is sweeter to hear the voice of hounds than to seek mercy. Oh, son of Calpurn, wilt thou allow to go to heaven my own dog and greyhound?"

The continent of Europe would seem to be the most promising field for the labors of any one who is looking for descendants of the genuine Irish wolf dog, and I wish to make a suggestion on the subject for the consideration of whomsoever may regard the matter as worth following up. The Pall Mall Magazine for October contains an article by W. A. Bailie Grohman, entitled "How the Dukes of Coburg Hunted Centuries Ago." It is illustrated with pictures of hunting scenes from the old hunting book of Duke Casimir of Coburg, who lived from 1564 to 1633. Only two copies of the book from which the pictures are taken exist. One is owned by Count Wilczek, of Vienna, and the other is in the castle of Coburg. The pictures were executed by the Duke's court painter, Wolff Pirkner, who completed them some time before the Duke's death. The book from which Mr. Grohman's illustrations were copied contains thirty-nine pictures on pages 20 by 9in. Duke Casimir, who was a keen sportsman, imbibed his love for the chase at the court of the Elector of Saxony, and as Irish wolf dogs were at that time exported to the continent in large numbers, it is not unreasonable to assume that the Count saw and admired many of the dogs. Now for the point. The pictures show that Count Casimir had a large number of dogs to accompany him in the chase. The hounds shown chasing deer are described as "English hounds as big as a yearling steer." But England was not noted for producing big dogs at that time, and the conclusion I draw is that the Count's hounds were pure Irish wolf dogs, and that the pictures drawn by the artist, Wolff Pirkner, are faithful representations of the great dog as he was in the days of his glory. This theory is supported by the pictures in the magazine, which it is to be presumed are as nearly as possible reproductions of the originals. The dogs are represented to be white or marked with dark colors, and they carry the tail curved over the back, just as the authorities say that the wolf dog did. One of the pictures shows several of the dogs, each in charge of a man, in a procession at a grand hunting festival. A dwarf leads one of the dogs, and Mr. Grohman's comment is, "To judge by the size, the dwarf could hardly have looked over the back of the smallest."

From these premises is it not safe to say that by referring to the original pictures by Wolff Pirkner, and comparing the stature of his dogs with those of his men, we could arrive at absolute certainty as to the size, color and general appearance of the Irish wolf dog?

EDMOND REDMOND.

ROCHESTER, N. Y.

Points and Flushes.

Mr. F. O. de Luze, treasurer of the Westminster Kennel Club, writes: "I regret to announce that our stud dog Sandford Druid died Nov. 25, of rheumatism of the heart."

Continental Field Trials

LEXINGTON, N. C., Dec. 4.—Heavy rains set in on Friday night last and continued with a few intermissions into Sunday forenoon. In the afternoon the weather changed to cold and windy. The grounds everywhere are extremely muddy. Birds are reported both scarce and plentiful, so that one report must be wrong. There are sixteen starters in the Derby, drawn to run as follows:

P. Lorillard, Jr.'s, b., w. and t. setter dog Pink's Boy (Gleam's Pink—Belle of Pawling), C. Tucker, handler, with Charlottesville Field Trial Kennels' b. and w. ticked pointer bitch Ranee (Rip Rap—Toxic), C. E. Buckle, handler.

H. R. Edwards' b., w. and t. setter dog Colonel R. (Harwick—Trap, Jr.), Geo. E. Gray, handler, with D. E. Rose (agt.) b., w. and t. setter bitch Lena B. (Tony Boy—Nellie C.), D. E. Rose, handler.

Mrs. R. P. Carroll's b., w. and t. setter dog Halbard (Count Gladstone IV.—Iza), John White, handler, with Fox & Blythe's liv. and w. setter bitch Reta's Flounce (Antonio—Reta H.), R. V. Fox, handler.

Mrs. R. P. Carroll's b., w. and t. setter dog Tabard (Count Gladstone IV.—Iza), John White, handler, with Jackson-Denmark Kennels' b., w. and t. setter bitch Marie Girard (Count Gladstone IV.—Lillian Russell), Geo. E. Gray, handler.

Fox & Blythe's b., w. and t. setter bitch Nightingale (Antonio—Reta H.), R. V. Fox, handler, with Charlottesville Field Trial Kennels' liv. and w. pointer bitch Nana (Rip Rap—Toxic), C. E. Buckle, handler.

J. P. Green's b., w. and t. setter dog Count Danstone (Count Gladstone IV.—Dan's Lady), Geo. E. Gray, handler, with W. P. Austin's liv. and w. pointer dog Lad of Jingo (Jingo—Dot's Pearl), D. E. Rose, handler.

H. K. Devereaux's o. and w. setter dog Young Sport (Marie's Sport—Nelly Bly), Geo. E. Gray, handler, with Hobart Ames' b., w. and t. setter dog Dewey (Tom Boy—Nellie C.), D. E. Rose, handler.

Miss C. Parson's b., w. and t. setter dog Berber (Antonio—Laski), J. White, handler, with P. Lorillard, Jr.'s, b., w. and t. setter dog Jean de Reszke (Gleam's Pink—Dell V.), C. Tucker, handler.

The judges are Messrs. Edmund H. Osthaus, W. B. Meares and Irving Hoagland. B. WATERS.

Dec. 5.—In to-day's work the braces ran as follows: Pink's Boy with Ranee, Colonel R. with Lena B., Halbard and Reta's Flounce, Tabard with Marie Girard, Nightingale with Nana, Lad of Jingo with Count Danstone, Young Sport with Dewey, Berber with Jean de Reszke. For the second series Lad of Jingo was selected to run with Nightingale, Count Danstone with Tabard, Colonel R. with Pink's Boy.

Rifle Range and Gallery.

Brooklyn Revolver Club.

THE Brooklyn Revolver Club's schedule for December consists of the following:

Tuesday, Dec. 6.—Handicap shoot for Boemermann medal, .44cal., 20yds., standard American target.

Friday, Dec. 9.—Thirty-two-caliber revolver handicap, pocket revolvers not over 4½in. barrel. Open sights for Wilson trophy; Columbia target, 20yds.

Tuesday, Dec. 13.—Twenty-two caliber pistol match, 20yds., standard American target. Prize donated by Mrs. H. L. O'Brien.

Thursday, Dec. 15.—Ladies' contest, four prizes, .22cal. pistol, 10yds., Brooklyn Revolver Club wheel of fortune target.

Friday, Dec. 16.—Medico team vs. Non-Medico team; appropriate prize; wheel of fortune target.

Tuesday, Dec. 20.—Team shoot, Olney & Co. vs. Shedd & Co., loving cup for prize.

Friday, Dec. 23.—Handicap shoot, 10yds., .22cal. pistols, for club pin.

Tuesday, Dec. 27.—Handicap shoot, any revolver or pistol, .22 to .45cal.; five strings of 10 shots per man; best 10-shot target to count; 20yds., standard American target; prize a silver cup.

Conditions of matches subject to change by the range committee. The club's range is at 313 Grand avenue.

Trap-Shooting.

Fixtures.

Dec. 7-8.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Manager.

Dec. 13.—Burnside Crossing, Ill.—John Watson's tournament; live birds only.

Dec. 14.—Stuttgart, Ark.—All-day tournament; live birds and targets.

Dec. 19-21.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Kewanee, Ill., and V. Studley, Neponset, Ill., Managers.

Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

DRIVERS AND TWISTERS.

The scores made by Capt. Money and C. S. Guthrie in their match at the Carteret Club's grounds on Tuesday of last week, Nov. 29, were remarkable. Capt. Money really killed 100 straight, all his lost birds, three in number, falling dead out of bounds. Guthrie killed 98 out of 100, but scored only 96 of them, losing the race by one bird. At the end of the 58th round he was two behind, but killed the last 42 straight, while Capt. Money lost his 73d bird. Capt. Money's high run was 50 straight. It is interesting to note that in this match Capt. Money scored three more birds than he ever killed in an individual match previously, while Guthrie tied his previous highest score in a 100-bird race. Capt. Money shot a mixture of shells, as the notice was too short for him to specially load up a lot for the match. He shot 50grs. of E. C. in U. M. C. Trap and W. R. A. Company's Leader shells, the shells being hand loaded, partly by himself and partly by his son, Harold Money, the latter portion having been intended for Harold's own shooting. Guthrie used 50grs. of Schultze in U. M. C., V. L. & D. Special shells, hand loaded by Messrs. Von Lengerke & Detmold.

On Jan. 18, 1899, there will be a live-bird shoot on the new grounds at Stony Creek, Pa. The event will be known as the Stony Creek handicap, 25 live birds, $10 entrance, birds extra, $150 guaranteed, handicaps from 26 to 20yds. Entries must be accompanied by $2.50 forfeit, and sent to Arthur A. Fink, 426 Franklin street, Reading, Pa. Stony Creek grounds are two miles from Reading, along the Stony Creek electric road.

The Brooklyn Gun Club will hold a live-bird shoot at Dexter Park on Jan. 5. Manager Wright is now at work upon an attractive programme for the occasion, and landlord Lippack, of Dexter Park, promises that he will trap some good birds for the club members and their friends to shoot at.

Admiral Courtney, of the Remington Arms Company, is in the city. He has been here for some days, and everybody is just so much the better for his visit; not richer perhaps, but better. He is shooting too just as well as ever, and carries more than one chip on his shoulder. Here's one of the chips: As a member of the Heavyweight Squad, in fact, as Colonel Commanding that aggregation, he still avers that that squad can beat any other six men in the country their own weight, at either targets or live birds. The squad is made up as follows: Ed Rike, of Dayton, O., 326lbs.; Admiral Courtney, 285lbs.; Col. Thomas Martin, 283lbs.; L. H. Schortemeier, 282lbs.; Dutchy Smith, 268lbs., and Tom Keller, the baby of the bunch, 236lbs.; total weight, 1,680lbs., or an average of 280lbs. per man. In days gone by, the late John T. Mascroft, of Worcester, Mass., was a member of the squad, and a most popular one too. After his death Col. Thomas Martin, of Bluffton, N. C., was unanimously elected to fill the vacancy.

Mr. Paul R. Litzke writes that there will be a one-day tournament held at Stuttgart, Ark., Dec. 14. The principal event will be a 25 live-bird handicap, entrance $10, birds extra. There will also be some target events, with added money. As is customary and popular here in Arkansas, the money will be divided by the Rose system. The shoot is an assured success, for there are already twenty entries for the handicap. Stuttgart is situated right in the heart of Grand Prairie, and those who attend this shoot will have an opportunity to enjoy the finest of quail shooting should they care to remain over a day or so. Prairie chickens are also fairly plentiful in the vicinity of Stuttgart, though this shooting is not at its best, owing to the birds having pack. I am sure that the local shooters will take pleasure in giving the visitors a day's field shooting should they care to avail themselves of the opportunity.

The Parker gun in the hands of Master Guy Grigsby, of Louisville, Ky., the thirteen-year-old wonder of the shooting world, is entitled to special mention. Master Guy won the Kentucky Futurity, a 50 live-bird match, at the Kentucky Gun Club grounds, Nov. 24, with 49 kills, and one dead out of bounds. He killed 44 straight, losing his 5th bird dead out, hit hard with both barrels. He also won the Nelson County Fair handicap, score 14 out of 15. On Nov. 18 in another match he killed 18 straight, all he shot at. On Nov. 23 he won the club gold button, killing 10 straight. All of these phenomenal scores were made in company with Kentucky's best trap shots, of whom there are many, and some good ones. Master Guy is small of his age, weighing 75lbs. He uses a 12-bore Parker, 28in. Titanic steel barrel gun weighing 7½lbs., and in the Futurity had a 25yds. handicap.

Dominie Beveridge is making a brief stay at his home in Newark, N. J., his object being to take in the target shoot at Hackensack, N. J., on Wednesday of this week, and incidentally to win the E. C. trophy and the New Jersey championship that goes with it. Mr. Beveridge was present last week at the two days' shoot of the Sterling Rod and Gun Club, of Sterling, N. Y., and was successful in landing first money in all but two of the target events, and he also captured first money in every live-bird event. On Saturday last he and Admiral Courtney took in the Boiling Springs' monthly shoot. As Mr. Beveridge shoots a Remington, the Admiral was out with one of his usual challenges: "The Dominie and myself will make a match with any two men of our weight on the grounds, at any kind of targets or live birds, or at any old thing you like to mention."

Dr. Smith, of St. Louis, didn't do a thing to Dr. Knowlton last week. Dr. Knowlton stacked up against a bad man, meeting a crushing defeat by the score of 98 to 88. What Dr. Knowlton was doing is not known, but Dr. Smith's action in the matter is self evident. Some few months ago Jack Fanning found the St. Louis medical gentleman a hard nut to crack, but Jack performed the feat by killing 99 to Dr. Smith's 96.

L. T. Duryea has returned to this city from his lengthy stay out West, during which time he has traveled as far west as the shores of the Pacific, and done some shooting at the recent tournament of the Sportsmen's Association of the Northwest. His defeat at Chicago by Billy Mussey has had no effect on his spirits, and he is now, as ever, ready to shoot a match for fun or the other thing.

The monthly shoot of the Brooklyn Gun Club will be held on Saturday of this week, Dec. 10. Manager John S. Wright will have some special prizes to be competed for, in addition to the main event of 50 targets for the club's yearly prizes. As the days are short now, Mr. Wright requests that everybody will be on hand early, in order that the programme may be carried out to a finish before darkness sets in.

Rolla Heikes has not been heard from for a few weeks, but the Ohio quail can tell something about what he has been doing to them. He will next be seen at John Watson's shoot, Dec. 13-16, revisiting Watson's Park. It is only a little more than a year since he was shooting live birds there for the Cast Iron medal, a trophy that still belongs to him.

The Central New Jersey Trap-Shooters' League wound up its first season on Thursday of last week. On that date several members of the League went to the grounds of the Reservoir Gun Club, of New Brunswick, N. J., and spent an enjoyable time. Several sweeps at live birds were decided, the New Brunswick crack, Capt. Bunk, killing all the birds he shot at.

On Friday of this week, Dec. 9, in addition to the regular programme of events announced by Charlie Zwirlein, of Yardville, N. J., a special 25-bird match, $25 a side, will be shot at Yardville, the principals being Clarence Lambert, of Plainfield, N. J., and Louis Hildebrandt, of Lebanon, N. J.

Jim Elliott has challenged Fred Gilbert for the Cincinnati live-bird trophy. The match is to be shot on Monday next, Dec. 12, at Watson's Park, Chicago, the day prior to the commencement of John Watson's tournament, Dec. 13-16.

Harvey McMurchy was expected to arrive in the city any day last week, but up to Saturday evening he had not been heard of. His friends still live in hopes of his speedy arrival, for hope deferred, etc.

The first match of a series between the Boiling Springs Gun Club, of Rutherford, N. J., and the Passaic, N. J., City Gun Club will take place on Saturday of next week, Dec. 17.

Audubon Gun Club of Buffalo.

BUFFALO, N. Y., Dec. 5.—At the Saturday weekly gathering of the Audubon Gun Club several individual matches were shot off in addition to the regular programme, and there was a good deal of gossip about the Besser-Wheeler 100-bird, $100 match to be shot off on Thursday of this week. Among the shooters at the park were J. N. Lilly and Royal Robinson, of Indianapolis, Ind.

The fourth event of the day's programme was the Hebard trophy shoot. James E. Lodge won this event, scoring 27 out of 30, with 3 added, making his total score an even 30. The third event was the club badge shoot, Norris winning in Class A, E. N. McCarney in Class B, and U. E. Storey in Class C.

Following are the scores in the opening events:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	15	25	30	Targets:	15	15	25	30
C Burkhardt	14	12	22	21	R H Hebard	..	..	21	27
McCarney	14	13	21	20	Kerew	..	13	15	22
E Burkhardt	12	9	19	27	Crooks	..	..	8	18
Walker	10	11	18	23	Lodge	..	12	16	27
Lilly	10	6	..	..	McArthur	..	..	11	23
Fanning	14	14	23	30	Foxie	..	14	..	..
Warren	15	14	20	24	Dr E S Carroll	..	13	21	28
Robinson	11	13	21	..	Porter	..	..	17	23
J J Reid	..	..	21	16	Storey	..	..	18	23
Jacobs	..	10	18	16	Norris	..	..	22	..

Event No. 5, at 7 live birds: Warren 6, McCarney 7, E. C. Burkhardt 6, C. S. Burkhardt 6, Schuler 5, J. N. Lilly 6, J. F. Reid 4, J. Fanning 5, R. H. Hebard 4, Dr. E. S. Carroll 6.

Besides the regular programme, two match races were on the day's card. The first was at 50 live birds, between R. H. Hebard and J. J. Reid, and the second between R. H. Hebard and T. B. Walker, which was at 25 live birds each.

First event:

R H Hebard .....01101000100101102222102220—14
1122212201012201222102211—20—34

Second event, Hebard to use one barrel; Walker privilege of both:

Hebard .....01111110011111001111101 11—19
Walker .....12102011100012111201212 00—17

Elliott—Smith Match Postponed.

ST. LOUIS, Mo., Dec. 3.—The match between J. A. R. Elliott and Dr. J. W. Smith, which was to have been shot here to-day, has been postponed to Wednesday, Dec. 7, owing to the illness of Elliott, who is sick at Kansas City.

ON LONG ISLAND.

Money Defeats Guthrie.

Nov. 29.—It was a great pity that the cozy club house of the Carteret Club, at Garden City, L. I., did not hold a large crowd of spectators this afternoon. The weather was pleasant, and the performances of Capt. Money and C. S. Guthrie on the Carteret birds was as good as anything of a like nature that I have ever seen. To score 97 and 96 respectively on any kind of birds at all is a big performance. Of course the birds to-day were not a lot of screamers, but they were a really good, fast lot, that with any wind to help them would have cut down the scores considerably.

Since both men were in the best of form, as may be told by looking at the scores, the birds were just the sort on which to make big scores, even in the Carteret Club's short, 30yd. boundary. They left the traps promptly; Capt. Money had only four loafers, while Guthrie had but five; as the Pittsburger does not approve of "sitters," he religiously called every one of them "No bird"; every one, that is to say, except his 58th. When he called "Pull" for his 58th bird, No. 5 trap opened and a dark, big bird hopped out with a skip and a jump, landing about a yard to the right of the trap, facing toward the club house. Guthrie was thinking of something else, perhaps his previous miss, for he had just lost his 57th bird, and forgot about his rule of "No-birding" sitters. He slobbered the bird with both barrels as it flew in toward the club house, the pigeon just clearing the boundary before falling dead. Thus, out of a total of 201 birds trapped in the match, 195 left the traps immediately they were opened.

Both Men Confident.

Capt. Money has been shooting in better form lately than he ever displayed before. His scores have been uniformly high for the past three months, while his health has also been of the best, a few days now and then on the Jersey hills after grouse having kept him in capital shape physically. For these reasons the Captain felt confident of winning.

Mr. Guthrie, on the other hand, was also very fit and well, and felt just as confident about winning as Capt. Money did. He has been for about two weeks the guest of Mr. W. Gould Brokaw at the latter's winter residence at High Point, N. C., and has done his share toward depleting the stock of quail in the Tarheel State. He shot a few pigeons while in North Carolina, and found that he was in as good form as ever. On his return to the North yesterday, he at once hunted up Capt. Money, as he wished to get the match (made prior to his departure for the South) off his hands before leaving for his home in Pittsburg this evening. He wired Capt. Money at Oakland about 3:30 P. M. yesterday, but the message did not reach its destination until 7:30 A. M. this morning. The message stated that if to-day was fine, Mr. Guthrie would like to shoot the match if agreeable to Capt. Money. Short as was the notice, the train leaving Oakland at 8:37 A. M., the Captain got out of bed, wired a favorable reply to Mr. Guthrie; also sent a wire to the Carteret Club about birds, then dressed, ate his breakfast and caught the train.

Last spring Mr. Guthrie defeated Capt. Money in a 100-bird race, which I had the pleasure of refereeing. When I saw Mr. Guthrie yesterday afternoon, he asked me to come out and officiate in the same capacity at this match. Naturally I accepted the compliment, with all the more pleasure because I felt that the match would be a redhot one; and it was. Owing to the lack of previous notice, not a soul witnessed the match outside of the two principals and myself, except Fred Knopf, the club's superintendent, and his two active trapper boys. As I wanted to keep the score inside the club house, it was agreed that Fred Knopf should act as referee, with the proviso that in case of a question of rules the matter should be referred to me. The match, however, really needed no refereeing on my part, for Knopf acted very efficiently, only being in doubt about one bird. This was a bird from No. 5 trap, killed by Capt. Money a short distance from the trap with the snappiest of snap shots. Mr. Guthrie very disinterestedly at once ruled that there was no need of referring the point to me, as in his opinion the bird was well off the ground when killed.

Could not Scare Each Other.

In the train from Long Island City I went into the "smoker," while the two principals occupied jointly a seat in a day coach. When we again joined forces at Garden City, I found that they had been regaling each other with tales of their prowess at the traps on recent occasions. Mr. Guthrie said to me: "The 'old man's' been trying to scare me by telling me what scores he has been making lately. He can't scare me one bit, for I have been watching his scores in the papers, and know just what he's been doing. I was never in better shape in my life, and will have no excuse to make if he beats me, which I don't think he will do."

Capt. Money also said to me privately: "He's very confident, and is certainly shooting well enough to warrant his being so. But I feel as fit as a fiddle, and will let him know at the end of the match that he's been in a shooting match. I shouldn't be a bit surprised if I killed 98 to-day." Well, I didn't quite agree with him about the 98, but I did believe that there would be a shooting match.

Owing to the congested state of traffic on the Long Island R. R., which was due to Saturday's blizzard and the wreck of a snow plow at Queens, we didn't reach the grounds until about 2 o'clock; consequently no time was lost in preliminary work, each man only shooting four or five byes to see that everything was in working order. No misses were recorded in the shooting of the byes, though one or two good, fast birds were trapped.

It had been thought that there would be a great glare from the sun on the snow, but the glare was not as bad as might have been expected. Still the sun shone in the shooters' right eyes very strongly for the first half of the match, causing birds with a right-quartering tendency from Nos. 4 and 5 traps to be hard to locate.

Notwithstanding the heavy fall of snow on Saturday, there was no snow on the grounds. This was due to the high circular fence around the club's property, which acted as a snowshed, the gale eddying around the center of the grounds and piling up the snow all around the fence until it was heaped level with its top.

Guthrie Won the Toss.

Guthrie won the toss and went to the score ahead of the Captain. The latter, who had in his hurry left his shooting coat behind him, was wearing a knitted shooting jacket that he had borrowed underneath his own coat. This was rather too much clothing for him, and he lost his second bird dead out of bounds. Off came the knitted jacked, and the Captain set in to catch Guthrie, who was cutting down his birds like a winner. In the 12th round Guthrie lost a bird dead out of bounds that would have been scored in an 80yd. boundary. Capt. Money killed his bird, and the two were tied. For the next 28 rounds they remained tied, the tie being broken by Guthrie losing a fast bird from No. 3 that got away without any perceptible damage. It was a hard bird to see, but flew apparently true as a die. This put the Captain one ahead. As he said: "Here's where we part company!" So they did for the next 11 rounds, the score being again a tie at the end of the 53d round, when Capt. Money lost a fast bird, a driver from No. 1 trap, that fell dead out of bounds well within a 50yd. boundary. Both had now killed 51 out of 53 shot at! Great shooting!

The Tie Broken for Good.

The tie did not hold for long, as Guthrie in his 57th round lost a good bird from No. 1 that flew straight away; the first barrel had feathered it, but the second did not seem to touch it. This gave the Captain a lead of one, that was soon made two, when Guthrie lost his next bird in the manner described in the beginning of this report. From this point he pulled himself together and ran out with an unfinished run of 42, the second highest run of the match, Capt. Money's run of 50 straight, from the 3d to the 53d round, taking precedence. After the 58th round Capt. Money kept his lead of two until the 73d round, when he lost a towerer from No. 4 trap that was hit hard with the first barrel; it turned sharply and came back for the club house, Capt. Money misjudging its flight and not hitting it with his second barrel. It fell dead just behind the back boundary. They were thus one bird apart, with 27 more to shoot at—anybody's race. As, however, each killed out straight, the race ended in a victory for Capt. Money by the score of 97 to 96.

With a wire fence for a back boundary Capt. Money would have scored 99 in a 50yd. boundary; Guthrie would have scored 98 in an 80yd. boundary. It will be noticed that Capt. Money killed his 100 birds, and that 198 out of the 200 shot at were gathered.

The first 100 birds flew very well, but when the sun went behind a cloud and the sky became overcast the birds did not fly as fast as at first. The last 30 birds trapped, however, went away from the traps as quickly as any of those trapped earlier in the race.

Captain Money's Position.

The most interesting feature of the match to me was the change in Capt. Money's attitude while at the score. In years gone by he used to place his gun to his shoulder once or twice, and then ask: "Are you ready?" When he got the answer back, "Ready," he again placed the gun to his shoulder, "wiggling" the barrel up and down a little in a manner well remembered by shooters who have watched him shoot; he then lowered the butt slightly, placing it to his shoulder again when the trap was sprung and the bird was visible. Now he keeps the gun to his shoulder and shoots quicker and with greater accuracy than ever he did. His first barrel was very deadly, the score showing 38 single-barrel kills; in about as many more instances he fired his second when it did not seem at all necessary, using it more to keep in practice than for any other reason. His double-figure runs were 50, 19 and 27; Guthrie's were 11, 28, 15 and 42, unfinished.

Guthrie is apparently almost careless at the score. As he steps to the mark he calls, "Are you ready?" As soon as he gets back the answer he puts his gun to his shoulder once or twice, but loses no time before calling "Pull." He almost invariably uses his second barrel, and plants it quickly and very effectively. He was not shooting as cleanly with his first barrel as Capt. Money, but his second was well in evidence. Capt. Money required his second three or four times very badly, saving himself by its use on his 35th, 45th and 90th birds, all of which were brought to grass by extra long second-barrel work. Each time it occurred Guthrie said: "I had hopes."

The time the match was shot in was not phenomenal, but then neither man hurried at all. The dogs, too, were rather slower than usual, while Dandy stopped now and then to make a meal off the bird's head that he was sent to retrieve. All these things taken together, the match took just two hours and two minutes. It began at 2:10 and was over at 4:12.

How the Traps Fell.

The fall of the traps was rather peculiar, No. 4 trap only being pulled nine times all told, twice for Guthrie and seven times for Capt. Money. After the first half of the match, the fall of the traps played but little feature in the game, as by that time the sun was behind the cloud, and the glare from its rays was in the shooters' right eyes no longer. This glare made Nos. 4 and 5 traps the hardest in the first half, but the draw was about even. Guthrie had No. 5 trap thirteen times and No. 4 once out of the first 50 birds; Capt. Money had No. 5 twelve times and No. 4 three times in the same half of the match. The following table shows the fall of the traps to each contestant:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Guthrie	19	29	27	2	23	100
Money	24	27	22	7	20	100

Luck of the Birds about Even.

So far as the luck of the birds ran, it was about equal for both shooters. At first Guthrie outlucked Money, but later on Guthrie drew some hard ones, while Capt. Money got the best of the draw. Guthrie had 28 birds with an incoming tendency, Money having 20 of the same kind.

The score tells the rest of the story of this remarkably close and interesting race:

EDWARD BANKS.

Crescent Athletic Club.

Brooklyn, N. Y., Dec. 3.—The first shoot for the December cup was held on the Crescent Athletic Club's grounds at Bay Ridge to-day. Stake won this event with a score of 22. Three men finished with 20 and five men had 19 breaks to their credit. Following the December cup race was the handicap team match for the Sykes cup, two-men teams, 25 birds per man, handicap. In this event Halleck and Lott, with a total handicap of 11, won by 4 targets over the second team. Then Hallock and Notman beat Stake and Kryn in a team race at 12 pairs per man. The score:

December cup event:

Stake, 5	0111110111111100111010110011111	—22
Geddes, 0	1111111101110111010111110	—20

P E George	1110000010111010000010010—10

No. 3, 10 birds: Gaughen 8, George 8, Deacon 4, Frost 4.
No. 4, 10 birds: Gaughen 5, Deacon 8, George 8, Frost 4.
No. 5, match, 25 birds: Gaughen 21, Deacon 16.

E. G. FROST, Sec'y.

IN NEW JERSEY.

Central New Jersey Trap-Shooters' League.

Dec. 1.—The season of the Central New Jersey Trap-Shooters' League was wound up to-day by a live-bird shoot, held at New Brunswick, on the grounds of the Reservoir Gun Club, of that town. Eleven shooters in all took part in the events, among them being T. H. Keller, of the Peters Cartridge and King Powder companies. The day was one of the few fine ones of the past week or so, and the birds were a good lot of flyers.

Four events were decided, Nos. 1 and 3 being at 5 birds, entrance $3, birds included; No. 2 was 7 birds, $5, birds included; No. 4, $2 miss-and-out. Scores:

Boiling Springs Gun Club.

Dec. 3.—The regular monthly shoot of the Boiling Springs Gun Club was well attended, seventeen shooters putting in an appearance at the club's grounds, Rutherford, N. J., this afternoon. The guest of honor was Col. Courtney, the able exponent of the shooting qualities of a Remington gun. The light was bad and the shooting difficult, but the Colonel landed high man for the 50 targets shot at in the club race, breaking 45 out of his 50, closely followed by C. C. Beveridge, Dr. De Wolfe and Banks with 44 each. De Wolfe and Frank with 6 and 10 misses as breaks respectively, scored highest possibles. Scores in the club event were as follows:

Taylor	1101101110101111111100111 1101000001011101111010110—32— 6—38

*Guests.

The Sidell Gun Club.

SIDELL, Ill., Dec. 2.—Following scores were made to-day at the grounds of the Sidell Gun Club. The boys indulged in practice, and some good scores were made. Pigeons were trapped in good time, and the rise was 30yds. A stiff wind made some good kills necessary to get them. Cadwallader lost an easy one, his second; his Winchester stuck the second shot. Mr. Cadwallader shot L. & R. powder in Smokeless cases, while Mr. Sconce kept pace with Cad by losing two dead out, with King's Smokeless and New Victors. Scores:

SECRETARY.

The Grand American Handicap.

BUFFALO, N. Y., Dec. 2.—*Editor Forest and Stream:* All the discussion that has been indulged in about the division of moneys in the Grand American Handicap appears to me to be altogether superfluous. The critics who would change the division of the moneys have not yet advanced a valid reason for making a change. The shoot has always been successful, each year seeing an increase in the number of contestants. Under these circumstances, Mr. Banks' defense of the Interstate Association's policy in the past was not needed, although the figures he gave us in your last issue were interesting reading.

Why did not he point out to Mr. Fulford that his plan of having the majority rule the business affairs of the Interstate Association would hardly sound as well to him if brought home to his own business? Suppose I was to circulate a petition among the sportsmen of this country, in which I had outlined what sort of policy the Remington Arms Company should adopt unless they wished to make a failure of their business? What would Mr. Fulford or his employers say to such petitioners? I can guess; can you?

48GRS.

Hamilton Gun Club.

HAMILTON, Ont., Nov. 30.—At a meeting of the Hamilton Gun Club it was decided for our coming tournament, to be held on Jan 17, 18, 19 and 20, 1899, to reduce the boundary from 100yds. to 50yds., also to change Rule 19, which reads: "Bird shot on ground is lost bird," to "birds shot on the ground as no bird"; shooter to be fined 50 cents, practically adopting the American Shooting Association Rules.

H. P. GRAHAM, Sec'y.

WESTERN TRAPS.

Montgomery Ward Diamond Badge.

CHICAGO, Ill., Dec. 3.—Mr. E. Sturdevant, of Evanston Gun Club, won the Montgomery Ward & Co. handicap diamond badge over a field of eleven good starters, Steck and Comley, earlier winners of the trophy, tieing for second, Chladek third. The weather was cool and bright, the wind fresh and blowing almost directly in toward the score. The birds flew very well, and the afternoon was a pleasant one. The handicapping was so good that four men tied on 20, Shaw, Sturdevant, Hollister and Amberg, the latter also an earlier winner. Comley and Barto were put at scratch, and Steck was allowed one bird. Dr. Shaw had two birds, but only needed one to go straight, and was picked by some for winner again, but the man from Evanston was too strong for them all. Hollister missed his last bird in the tie in a singular manner. It was growing dusk, and the fire had been lighted in a blast furnace which stands at some distance from the park, and out of whose chimney poured a big red flame. The bird flew directly into the line of this background of red, and while one would have thought it would thus have been clearly defined, it was lost to sight as though swallowed up, and Mr. Hollister said he had no idea where it was when he fired. To-day's contest was the eighth in the series, which is now drawing to a close. Following are the scores:

E C Rice, 26, 6.....02222*0210220022022221200 w
C Comley, 30, 0.....1211111222112111*11 —19

The Good Ones.

Lovers of the trap will have opportunity to see Elliott and Gilbert in another race here during Watson's week, beginning Dec. 12, the race for the Sportsmen's Review cup, 100 birds, having been set for Dec. 12 at Chicago.

At St. Louis, Dec. 1, Dr. J. W. Smith shot a race at 100 birds with Dr. Knowlton, going out with the great score of 98, with one dead out, a close run for Rolla Heikes' Eau Claire record. Knowlton scored 88.

Languid.

Interest here is languid over the daily newspaper unlearned efforts to excite discussion over the Grand American Handicap next spring. It is likely that a good many Western shooters will attend it if they want to, and stay away if they see fit. There will be enough, from the East and the West, to make it the biggest shooting event of the year, and enough men will come from the West to give that section a full showing. So far as I can learn, there is a very strong sentiment to let well enough alone, and keep the customary divisions of the moneys, it being the sentiment of a good many that it is well to have at least one redhot finish event on the programme of any shooting year. As to paying shooters to attend, it is singular they should ask pay. A man going to a finish event ought to be able to lose or ought to stay home. If it is a question of pay, the reduction to absurdity is natural and swift. Why not let all the shooters stay at home, and take up a subscription for them, raising a purse which shall be equally divided among the shooters, without their being troubled to come out and shoot at all? There are some shooters who would not kick at this—and some who probably would. There are likewise many who are willing to risk all for the sake of winning all. No doubt we shall have much cry, and perhaps a little wool-pulling, but no doubt also the shooters will in goodly numbers pack their guns and go to Elkwood for a try for the biggest money of the year and the most thorough shooting event. I make no doubt that the Western men will be there in full quota and ready to shoot a hot gait and take their medicine, whatever that may be. You can get a sweepstakes shoot in a good many places, but a lot of people think a Grand American Handicap ought to be a shade steeper than a country sweep.

Pueblo Shoot.

The tournament of the Colorado State Fish and Game Protective Association, concluded at Pueblo last week, was a good one, as at least the Colorado Springs men will say, though it may have seemed gloomy to some of the others. A. J. Lawton, of Colorado Springs, won the State individual championship, the medal thus becoming his property. J. W. Garrett, of Colorado Springs, shot a gait of .945 per cent. Garrett, with W. R. Mason, of Colorado Springs, won the Salida cup in the team shoot, 57 out of 60, and otherwise went out after everything in sight, to the great satisfaction of the Pike's Peak town. Funk, of Pueblo, was high gun the first day, making the grand run of 96 without a skip and scoring 219 out of 230 targets shot at, Mason 218, Garrett 217, Lawton 215.

Spokane.

In the Thanksgiving shoot of the Spokane, Wash., Gun Club McBroom swept everything clean, killing every bird he shot at in three events, 27 in all. About a dozen and a half took part, the shooting being at live birds.

Keokuk.

Keokuk Gun Club, of Iowa, held a merchandise club shoot on Thanksgiving Day, with over two dozen entries, two 15-bird and two 10-bird sweeps being run off at targets. In No. 1 Leindecker was first, Woodbury second. In No. 2 D. Harrington won first, Brown second. In No. 3 D. Harrington was first, Heller second. In No. 4 Heller was first, Brown second, prizes of interest being generally distributed in lower moneys also.

Louisville.

The Kentucky Futurity for 1898, at 50 live birds per man, was won on the grounds of the Kentucky Gun Club at Louisville, Ky., on Thanksgiving Day, by a mere boy, Guy Grigsby, who shot out men like Gay and De Long with perfect ease, and scored 49 out of his 50 birds in style which a veteran could not surpass. He was given the good mark of 25yds. in the handicap, but it proved too much to offer him; for, after missing his 6th bird, he killed 44 straight, pretty good for a thirteen-year-old boy. Following are the scores:

Schultz, 30 .....1122222222222222221*2122111222211212122202221 22*21111—47
Gay, 31 .....221222*22222222222*22211121222222222222*22122222 —47

Milwaukee.

A few members of the Wisconsin Gun Club met Thanksgiving Day and passed a pleasant hour or so. In a 10-bird sweep, live birds, Farber and Heiden tied on 10, and Schmidt and Horlick scored 9. Following were target scores:

Farber	8	7	8	6	12	7	48	Horlick	7	6	10	7	13	9	52
Schmidt	7	9	7	8	11	10	52	Himmelstein	9	7	8	10	10	..	44
Heiden	8	9	7	5	12	5	46	J Haertle	10	9	8	9	11	6	53

A trap-shooters' league is on the tapis for Milwaukee clubs, and early meetings are expected.

Winnetka.

Winnetka Gun Club, Chicago suburb, shot Thanksgiving Day, and F. T. Richardson killed 10 straight, R. Daggett next with 9, E. J. Walsh 8, the birds going well and the shooting hard.

Kansas City.

Dave Elliott rather ill-used his brother Jim in the Thanksgiving shoot at Washington Park grounds, K. C., going off the score with the only straight 25 made, whereas J. A. R. scored but 19. The latter was handicapped 2yds., the others at 29yds., 25 birds, $10. Geo. Stockwell scored 24, and Chris Gottlieb 23, as below:

G W Stockwell.....2211211112222022221221221—24
Chris Gottlieb .....1010102221222222222222122—22

Cleveland.

Glenville Gun Club, of Cleveland, O., had a rattling good target shoot Thanksgiving Day, and the top man, May, shows a good record, 123 out of 130. Score, each man 10 birds:

Sterling	7	8	8	3	9	10	7	8	4	7	8	9	8
Griggs	10	7	5	7	9	6	8	6	8	8	7	8	9
Snow	8	9	8	8	9	6	9	6	7	7	8	8	8
May	10	10	8	8	10	9	10	9	10	9	10	10	10

Nashville.

On Nov. 29, at the Belle Meade grounds, at Nashville, Tenn., Wm. Gerst defeated J. Jonnard with a score of 86 to 78, at 100 live birds. The birds were flyers, and a stiff wind made the work hard. Score:

W Gerst, Jr, 30 1122101231112200101121202222221212111*21121022112 2201201122211102200*2111111122112212222100222122 86

Butte, Mont., Gun Club met Nov. 27 for the weekly shoot. A little team shoot, 12 live birds, two-men teams, resulted in a victory for Christianson and Davey, who scored 11 each. In a 25-target sweep Smith won, after tieing Christianson twice.

Carter won the Parker hammerless gun, special prize of the Ottumwa, Ia., Gun Club, in the 19th shoot, last Saturday, scoring 32, which, with his handicap of 10, placed him with 42.

Remember the Kewanee shoot, Kewanee, Ill., Dec. 19-21, two sets of live-bird traps and one of targets. E. E. Baker, Kewanee, will advise.

Remember the Maine. Also remember Watson's warm week, Chicago, Dec. 13, and following through the week. This will be the shootingest shoot of the fall. E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Chicago Challenge Trophy.

The contest for the Chicago challenge trophy between Silas Palmer, holder, and Elliott S. Rice, challenger, took place at Watson's Park, Burnside Crossing, on Tuesday afternoon, Nov. 29. The race was attended with interest, though few spectators were present. Both participants shot in good form, each centering his birds well, and many good kills were made by them, which received applause.

The elements were such that it was expected the birds would prove slow, but all were disappointed in this respect. The wind blew fiercely, outgoing from the right quarter, with an overcast sky and snow-covered grounds; birds of varied colors were difficult to find quickly.

Palmer won the toss, and went to the score first. His first three birds he killed in good order, but his 4th, a copper-colored left-quartering outgoer, he undershot. His 7th he failed to lead sufficiently to stop in bounds. His 14th, a left-quartering towerer, was greased well with the second barrel. His 15th was hit in the head, and hovered for a moment, when the wind carried it close to the boundary before it fell dead. His 17th was a dark tailer, which he missed clean with the first, but made a good stop with the second. His 21st was a blue left-quartering low flyer, while hard hit, was able to get over the boundary, only to fall dead out of bounds. The remainder he killed and went out with 22 out of 25, thereby losing the race by one bird.

Mr. Rice killed the first 11 straight, with luck favoring him in his 11th, which fell against the wire boundary to the inside. His 12th, a white-tipped black bird, was hard hit, but fell dead out of bounds. He made good kills of his 15th and 16th, but lost his 20th, which was a white left-quartering towerer, it falling dead out of bounds. This made 18 out of 20 dead, and tied Palmer's score. His 22d was a white tailer, hit hard and fell close to the boundary. He missed his 23d, a right-quartering incomer, which he should have stopped easily, also his 27th, which was shot behind. Mr. Rice shot a splendid race up to his 22d bird, killing 20 out of 22, with two dead out of bounds, and ended the race by dropping three out of the last six shot at, it being necessary to kill his last bird to win, and this he did.

This is the first winning of the trophy by Mr. Rice, and had Mr. Palmer defeated him in this contest he would have won the same four times. This is the first challenge issued by Mr. Rice for a trophy, and his first winning, hence he is to be congratulated in his maiden effort. Both participants shot 3½ Du Pont, 1¼ 7. Palmer in Leader cases, Rice in Trap cases. Palmer a Greener gun, and Rice a gun made by Old Hoss Stannard.

The race was a handicap, fixed by the trustees. Rice 30yds., 28 birds, Palmer 30yds., 25 birds.

Following is detailed score of the result:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Challenges.

Ed S. Rice and A. C. Paterson have both challenged Mr. E. S. Rice to contest for the Chicago challenge trophy, and await the decision of the trustees to ascertain who will be the next contestant for the same.

Gilbert vs. Elliott.

J. A. R. Elliott, of Kansas City, Mo., has challenged Fred Gilbert, of Spirit Lake, Iowa, for the Sportsmen's Review cup, recently won by Gilbert at Cincinnati, O., and Mr. Gilbert accepts the same, naming Dec. 12 as the day of contest, and Watson's Park as the place. The race will be at 100 live birds for the cup and $100 each on the side. It is expected that a large number of shooters will be present on that day to witness the contest, as it is the opening day of Watson's winter tournament.

Eureka Gun Club Trophy.

The second bi-weekly contest for the Eureka Gun Club trophy took place on the afternoon of Dec. 3. The attendance was fairly good. Those present from out of town, as visitors, were Dr. Morris, of Dixon; Ed Howard, of Fox Lake, and N. M. Nusley. The contest was attended with interest, and the honors of the day were divided between Ed Bingham and A. C. Paterson, who killed 14 out of 15, Paterson missing his last bird.

The wind was strong outgoing from the left quarter, with an overcast sky, and the birds were, on the whole, a good lot of swift flyers.

Many good kills were made by some of the participants, which were roundly applauded. John Watson acted as referee, and his decisions were very fair in all cases.

The race was at 15 live birds, with a distance handicap, under the American Shooting Association rules.

Montgomery Ward Trophy.

The next regular contest for the Montgomery Ward & Co. trophy will take place on Friday next, Dec. 9. This date is shifted so as not to interfere with Watson's handicap in the tournament commencing Dec. 12, and continuing throughout the week. The interest in the trophy continues to be keen, and at the present time the winner cannot be picked, though the chances for the same lay between Barto and Comley. A. C. PATERSON.

Pottstown Tournament.

POTTSTOWN, Pa., Nov. 30.—The annual fall target tournament of the Shuler Gun Club, of this place, which was postponed from Thanksgiving Day, owing to the unfavorable weather, was held to-day, and proved to be the most successful shooting tournament ever given by the Shuler Club, and many of the visiting sportsmen said it was the finest shoot held in this vicinity for many years.

The sun shone brightly all day, and in all about 500 friends of the Shuler Club came during the day to witness the shooting in the different events. A cozy club house is built on the grounds, and this was occupied by the shooters when they were not needed at the score. The Shuler Club has one of the finest grounds for shooting in the State, and are always on the lookout for new inventions of traps or fixtures. The magautrap was used, and gave entire satisfaction. The grounds are inclosed with a high board fence, which makes live-bird shooting safe, as it keeps away "sleeper shooters." The Shuler members do not often shoot live birds, but at targets they keep things hustling all the time.

The management of the tournament was intrusted to Arthur A. Fink, of Reading, and the tournament committee of the club give manager Fink great credit for the efficient manner in which the events were run. Manager Fink was assisted during the day by the tournament committee, consisting of Messrs. Grubb, Saylor, Cole, and Eagle, who assisted at the cashier's desk or around the score when they were not shooting. The scoring was done by Elmer Ellis, official scorer of the Shuler Club, and the cashier's desk was in charge of Edward Jennings, of Reading, assisted by Messrs. Stone and Eagle, of the Shuler Club.

The principal event of the day was the diamond event, at 25 targets, for a handsome diamond stud, valued at $50, donated by the Shuler Club, which carried with it the championship of Montgomery and adjoining counties. After all the entries had shot their 25, Slonaker, of Pottstown; Brey, of Zionsville, and Kerr, of Reading, were tied for first with 19. In the shoot-off that immediately followed Slonaker broke 6 out of 10, Brey 7 and Kerr 7. In the next shoot Brey and Kerr again broke 7, and in the third shoot-off Kerr won, breaking 8 out of 10 to Brey's 6. This event was very exciting, and the difficult shots drew forth applause from the crowd of spectators, who occupied the porch of the club house. Octavius Bull, of Marsh, won the "booby prize," a large "searchlight" glass stud, valued at $1.50, by defeating Cole in the shoot-off. Each had hit 10 out of 25, and in the shoot-off Bull hit 3 out of 10, Cole forfeiting by refusing to shoot. Among the visiting shooters present were Harrison, Jack and Kerr, of the South End Gun Club, of Reading; Adams, Holmes, Hodges, Erb and J. H. Miller, of the Phoenix Gun Club, of Phoenixville; Benner, Wien and Shuler, of Boyertown; Trumbauer, Crothers, Dunlap, of Royersford; Jenkins, of Norristown; Brey, of Zionsville; Chas. Miller, of Pleasant View, and Octavius Bull, of Marsh.

The scores of the diamond event follow, 25 targets, $1.50 entrance, first prize handsome diamond stud, value guaranteed at $50, representing championship of Montgomery and adjoining counties; second, or "booby prize" imitation diamond stud, $1.50:

Trap around Reading.

READING, Pa., Dec. 3.—The programme for the opening shoot of the new Stony Creek shooting grounds, near here, on Wednesday, Jan. 18, 1899, is as follows: "The Stony Creek handicap, 25 live birds, $10 entrance, birds extra, $75 guaranteed for first money, $50 guaranteed for second money, $25 guaranteed for third money, class shooting. Entries to be made to Arthur A. Fink, manager, 426 Franklin street, Reading, Pa., accompanied by $2.50 forfeit on or before 10 A. M. day of shoot. All entries received up to that hour will be acted upon by the handicap committee. All other entries will shoot from the 30yds. mark. The handicap committee has not yet been selected, but will consist of three shooters who are well known to all. For every two entries above fifteen there will be an extra class, with a purse of $20. Shooting in the handicap will start upon the arrival of the 11 A. M. train from Reading. Late comers may shoot up to 12 A. M. Stony Creek can easily be reached from Penn street, Reading, by taking the car marked with a red flag going east. Cars run direct to the grounds. Loaded shells for sale on the grounds. Dinner will be served at the hotel grounds from 12 A. M. to 2 P. M. The birds will all be old, strong flyers, and the management will charge 35 cents per pair for birds. Practice shooting will begin at 8 A. M. Five ground traps will be used. The new grounds are fine for either target or live-bird shooting. All shooters are invited; any person who pays the entrance can shoot.

Sinking Spring, Pa., Dec. 3.—The second of a series of three fall target tournaments under the auspices of the Independent Gun Club, of this place, was held to-day on the club's grounds, at Hainly's Hotel. The club had at first intended to manage the shoot themselves, but at 12 A. M. to-day decided to engage Arthur A. Fink, of Reading, who arrived on the grounds after the second event was shot. There were a number of Reading shooters present who refused to shoot some because they did not have their guns with them, and others claiming the background to be poor. The shoot was advertised to start at 12

ZULU—SAIL PLAN.

o'clock, but it was 1 P. M. before the first shot was fired. Mr. Charles Ruth, secretary of the club, had charge of the first two events until manager Fink's arrival, after which Mr. Ruth acted as cashier; $7.50 was donated by the club to the two high guns, best average in first ten events on programme; $5 to first and $2.50 to second. Best average was made by John Matz, of Shillington, and Harry Coldren won second. Mr. Francis Yost, of Reading, was referee of all the events, and gave entire satisfaction to all. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Topton, Pa., Nov. 30.—The Topton Gun Club held a shoot on the club's grounds at the American House, this place, to-day. There were two events, one at live birds and the other at 5 targets. The scores follow:

Event No. 1, 5 live birds, $5 entrance:

J R Stufflet	10*20—2	Leibensperger	01*21—3
F J Dierolf	12111—5	Miller	*0*01—1
F C Gery	11**1—3	Kern	02*10—2

Event No. 2, 5 targets, entrance 50 cents:

Stufflet	11101—4	Werley	10011—3
Miller	11001—3	J W	11010—3
Dierolf	10001—2		

DUSTER.

Keystone Shooting League.

PHILADELPHIA, Pa., Dec. 3.—The regular weekly club shoot of the Keystone Gun Club was held to-day in a drizzling rain. No. 1 was the club shoot at 10 live birds, handicap rise. Nos. 2 and 3 were at 5 birds, 30yds. rise, and Nos. 4 and 5 were miss-and-out events. Scores:

Events:	1	2	3	4	5

The Colorado State Shoot.

PUEBLO, Colo., Nov. 23.—The Colorado State Fish and Game Protective Association held their tenth semi-annual tournament at Pueblo, Nov. 23 and 24, under the auspices of the Pueblo Gun Club. The programme consisted of 230 targets each day, with $200 added. The weather was perfect for the sport, but the attendance was very small to what was expected, as none of the Denver shooters put in an appearance, thinking probably it would get a little chilly on the grounds before the shoot was over; but nevertheless those who attended enjoyed the shoot, and are ready to attend the next one, which will be given at Colorado Springs Dec. 31 or Jan. 2.

The Salida cup team shoot was competed for the first day, two men to each team, and each man shooting at 20 singles, unknown angles, and 5 pairs of doubles, which was won by the Colorado Springs team No. 2.

C. L. Funk, of Pueblo, won high average for the first day by breaking 220 out of a possible 230, making an average of .957. W. R. Mason, of Colorado Sprnigs, was second with an average of .948; John W. Garrett, of Colorado Springs, third with an average of .943, and A. J. Lawton, of Colorado Springs, fourth with an average of .935.

Each of the above-named gentlemen shot a Winchester repeating shotgun; Funk also used the Winchester factory-loaded shells, and they were used by the other three parties at different times during the day. Following are the scores of each man as they were shot:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	20	15	20	15	20	15	20	20	15	20	15	20	15
C L Funk	18	15	17	15	19	15	19	19	14	19	15	20	15
W R Mason	19	14	18	13	20	14	19	19	14	19	15	20	14
A J Lawton	20	15	17	15	18	13	18	17	15	20	14	19	14
J T West	..	17	12	17	19	10	17	18	12	17	12	17	14
J W Garrett	20	13	18	14	18	15	19	18	15	19	15	19	14
M E Austin	16	12	16	14	18	14	19	19	15	..	..	19	13
J M Killin	18	11	16	12	18	13	14	16	13	19	13	17	12
James Hull	..	..	..	..	..	..	..	..	..	17	15	18	11
A R Boland	..	..	..	..	..	..	..	..	..	..	..	..	14

After event 7 was shot the Salida cup team shoot took place, two men to a team, and each man shooting at 20 singles and 5 pairs doubles. The following scores were made:

Colorado Springs team No. 1—A. J. Lawton 29, J. W. Garrett 28—57.

Colorado Springs team No. 2—J. W. Garrett 29, W. R. Mason 26—55.

Pueblo team No. 1—C. L. Funk 29, M. E. Austin 25—54.

Pueblo team No. 2—J. T. West 24, J. M. Killin 24—48.

Second Day, Nov. 24.

The second day's programme was the same as that of the day previous, except the individual championship, which was contested for, and which was won by A. J. Lawton, of Colorado Springs, with a score of 48.

The attendance was expected to be larger on this day, but there was but one name added, and that was the name of friend Cawthron, of La Junta. J. W. Garrett won high average, breaking three more targets than C. L. Funk. The scores to-day as a whole were not so good as the day before.

Some of Funk's friends expected to see him make a better score on this day than he made the day previous, as it was but the second time he used the Winchester gun at the trap, but he was handicapped to a certain extent in looking after the shoot, as he had charge of it, and it is the opinion of most of the boys that he can do better. Following are the scores as they were shot:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	20	15	20	15	20	15	20	20	15	20	15	20	15
J W Garrett	20	15	18	10	20	15	20	20	14	20	14	18	13
C L Funk	19	15	18	10	20	15	20	20	14	20	14	18	13
W R Mason	18	13	15	13	19	10	19	20	14	19	15	18	12
J T West	17	14	17	12	16	13	19	18	15	16	14	18	13
A J Lawton	19	12	16	13	17	14	20	20	13	16	14	13	13
A H Cawthron	18	12	18	11	17	13	18	19	12	14	13	15	14

James Hull	..	..	..	..	..	..	12	..	15	..	..	..	15	..
J A Holmes	..	..	..	..	..	..	..	..	..	..	..	..	16	12

After event 7 was shot the individual championship was competed for, each man shooting at 40 singles and 5 pairs doubles. The following scores were made: A. J. Lawton 48, W. R. Mason 47, J. T. West 46, C. L. Funk 45, J. W. Garrett 45, A. H. Cawthron 45, J. M. Killin 41.

Following are the names of those who shot the two days' programme, and the average of each one:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
C L Funk	460	434	.943	M E Austin	460	400	.868
J W Garrett	460	434	.943	J T West	460	395	.858
W R Mason	460	423	.920	J M Killin	460	357	.776
A J Lawton	460	415	.902				

STRAIGHTAWAY.

Pennsylvania vs. Clearview.

FERNWOOD, Pa., Dec. 3.—The University of Pennsylvania defeated the Clearview Gun Club to-day in a seven-men team match, 25 targets per man. Good scores were scarce, owing to the unfavorable weather. Sweeps followed the team match. The scores:

University of Pennsylvania.		Clearview G. C.	
Swain	20	Johnson	18
Paul	19	Leonard	18
Weaver	18	Miller	17
Wilson	18	Fisher	16
Freid	17	Wilson	15
Steel	16	Moore	10
Singer	16—124	Smith	10—104

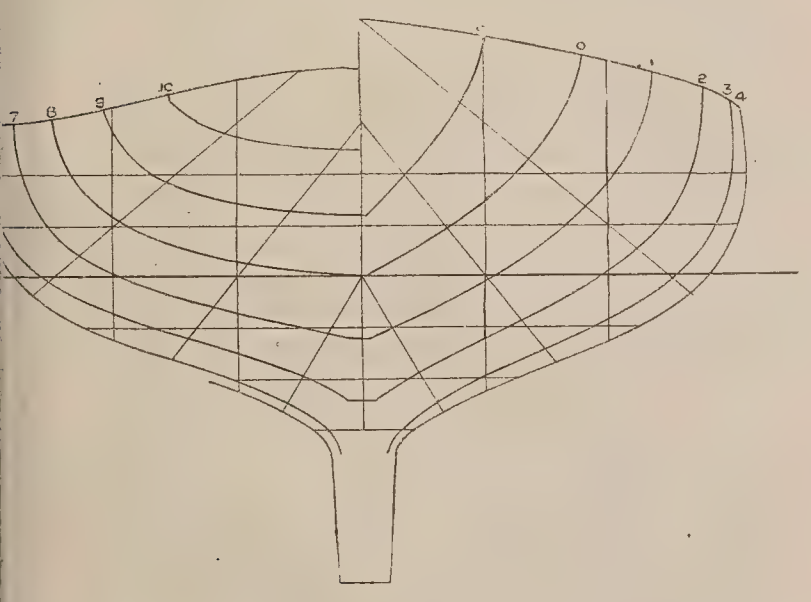
Yachting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter-century.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.



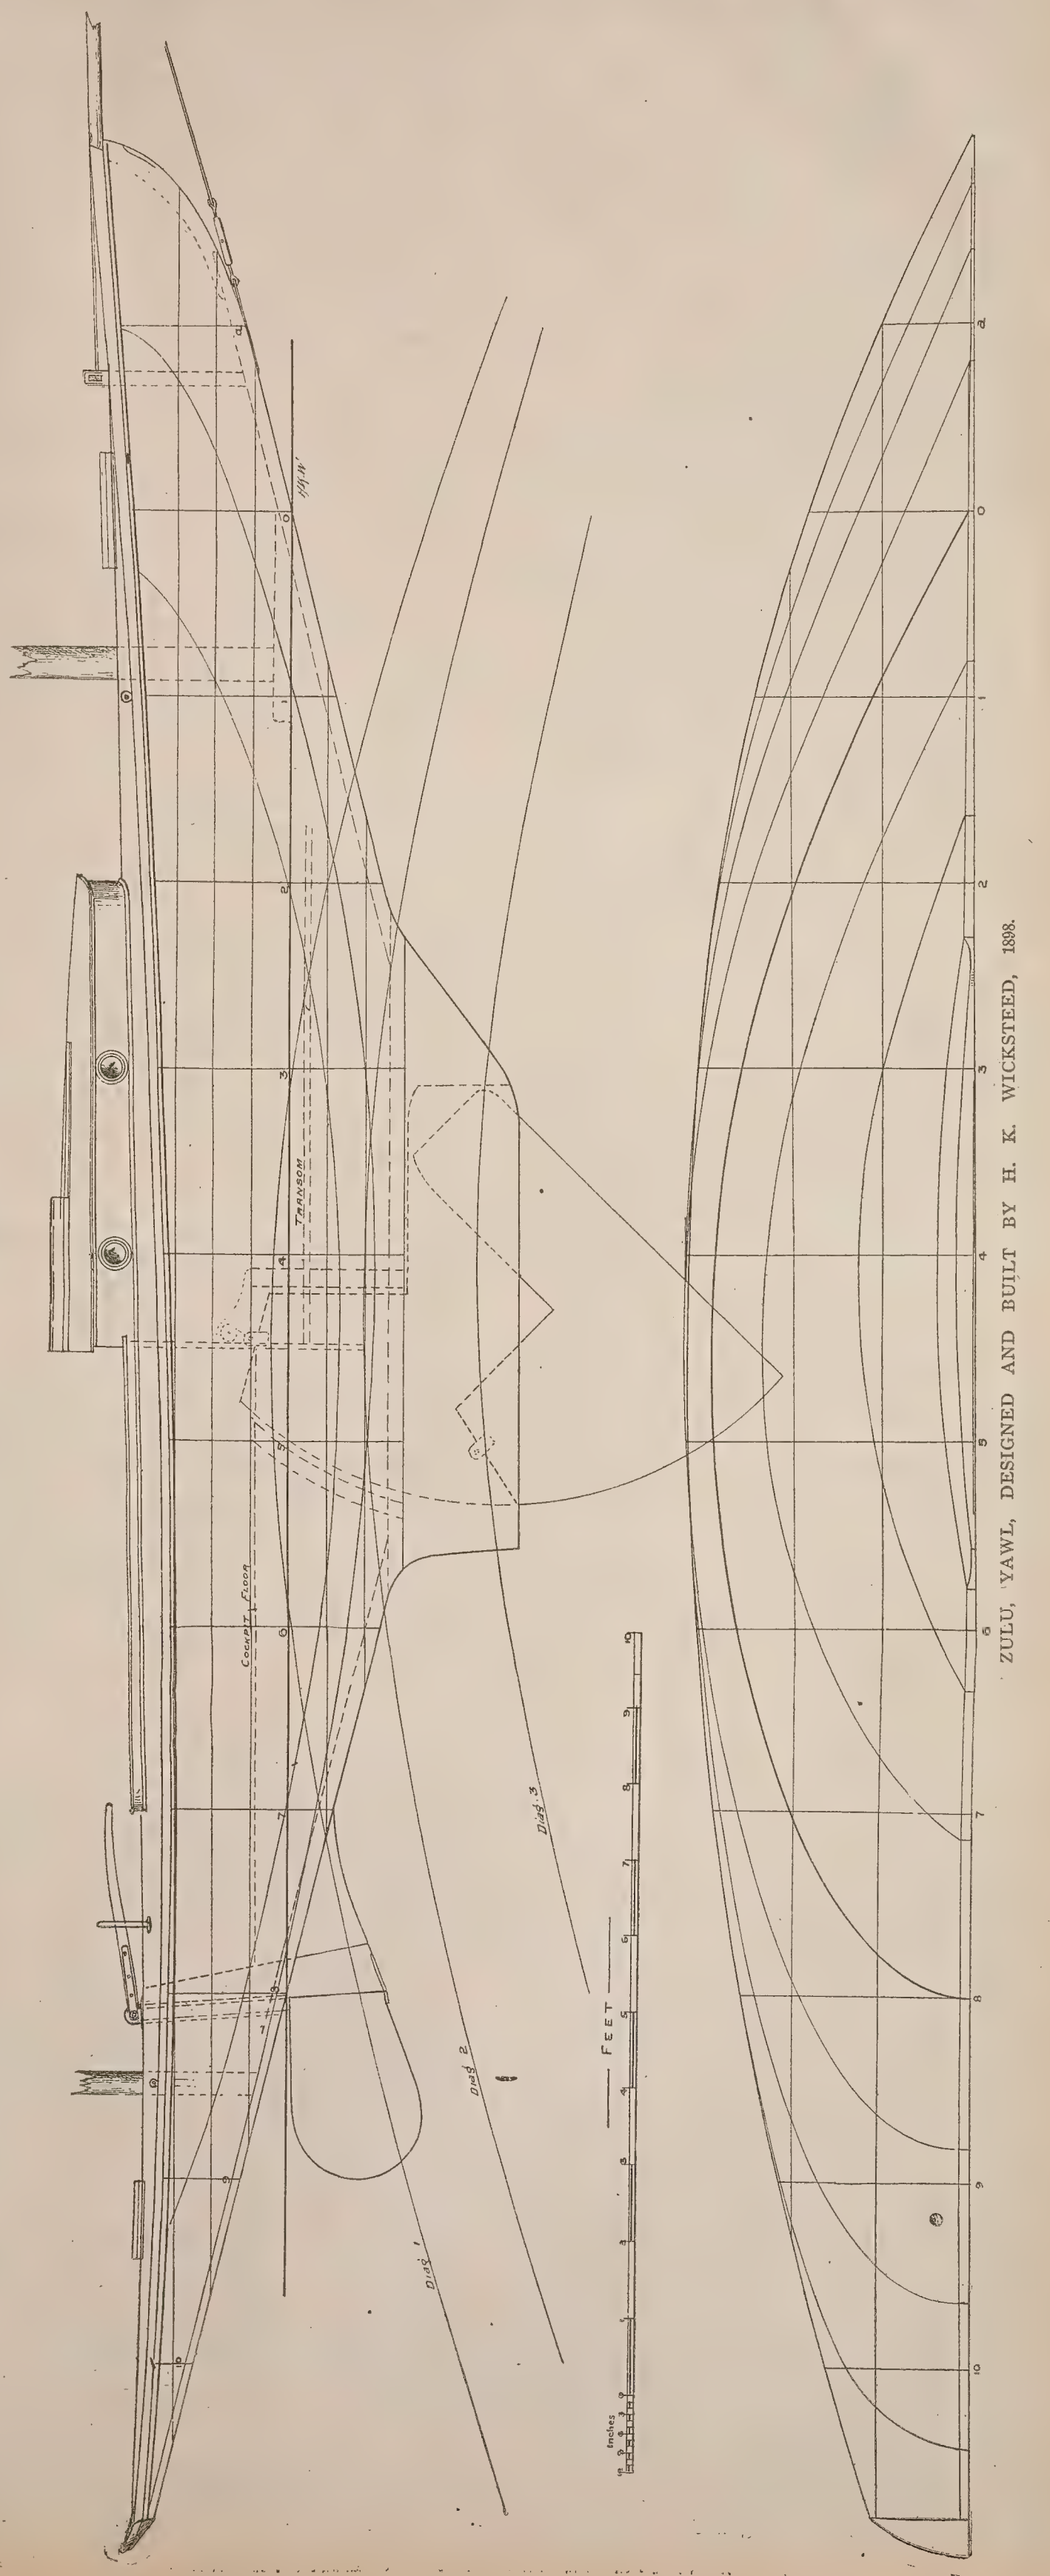
THE executive committee of the Y. R. A. of Massachusetts is now busy with a revision of the rules, the intention being to establish definite limits for each class of 35ft. l.w.l. and under. Among the details of the proposed restrictions are beam, freeboard, ballast, rail, floor space. head room, equipment and scantling. A meeting was held on Dec. 1, at which Mr. F. B. Jones, of the Y. R. A. of Long Island Sound, was present, and the proposed restrictions were discussed and various amendments suggested. On the following evening the executive committee of the Sound Y. R. A. met in New York, and Mr. Jones reported on the work of the Boston association. The committee was in favor of adopting restrictions in uniformity with the other association, but when it came to a question of actual figures it became evident that a great deal of time and some amount of work would be required to reach anything like satisfactory results. It was finally decided to retain the present class limits on the Sound, with limitations to scantling and a revision of the cabin definition. It is expected that this work will be completed at the next meeting of the committee, on Dec. 9, so that a general meeting of the association may be held the following week.

THE contract for the steel steam yacht designed by Watson for A. J. Drexel, of Philadelphia, has been let to Scott & Co., Greenock, on the Clyde. She will be 268ft. b. p., 36ft. beam, 20ft. depth to main deck, 1,630 tons net and 1,810 tons gross measurement. The twin screw engines, four cyclinder, with developed 5,000 H. P., giving a speed of seventeen knots. She will surpass the previous Watson boats, Margarita, Nahma and Varuna, in her appointments.

ON Dec. 1 the steel steam yacht Aphrodite, designed by C. R. Hanscom for Col. Oliver H. Payne, of New York, was launched at the Bath Iron Works, Bath, Me. She is 303ft. over all, 260 ft. b. p., 35ft. 6in. beam, and 16ft. draft, bark rigged.

Zulu.

THE little ship shown in the accompanying plans needs no description, as she speaks for herself, a handsome and shipshape craft that a man may own for years without any fear that she will go to pieces under him or that she will become obsolete and out of date in appearance. She is intended as a day sailing boat, with large cockpit, but at the same time she has a snug little house for "week-end" cruises; and as a proof of her capabilities at sea, she made the trip from Cobourg, Ont., on Lake Ontario, to Erie, Pa., a distance of 200 miles, early last May, in fairly heavy weather, running into Erie in a N. E. gale and big sea. On this trip she accommodated four very



comfortably, and her performance showed an excellent sea boat. In the summer races of a mixed fleet she has shown very good speed, though not regularly raced.

Zulu was designed and built by Mr. H. K. Wicksteed, of Cobourg, Ont., for Mr. F. W. Grant, of Erie. Her dimensions are:

Length—	
Over all	30ft.
L.W.L.	19ft. 4in.
Beam	7ft. 6in.
Draft—	
Hull	3ft.
With board	6ft. 6in.
Displacement—	
Total	4,350lbs.
Per inch at L.W.L.	484lbs.
Ballast—	
Keel (iron)	1,920lbs.
Inside (lead)	500lbs.
Sail Area—	
Total	510sq.ft.

Though thoroughly well built, the total cost was but $600, including 8ft. dinghy, spinaker, side lights, anchor, cable and small fittings; less than one-half the cost of a racing 20-footer with nothing save racing outfit.

Interlake Yachting Association.

Toledo, Nov. 26.

The Interlake Yachting Association, composed of all the yacht clubs on Lake Erie and the Detroit River, held its fall meeting in Toledo on Saturday, Nov. 26. There were present W. C. Jupp, representing the Detroit Boat Club; George Anderson, representing the the Sandusky Y. C.; E. W. Radder, representing the Cleveland and also the Put-in-Bay yacht clubs; George T. Bliss, representing the Erie Y. C.; F. B. Hower, representing the Buffalo Y. C.; John Rathbone, representing the Detroit Y. C.; Henry Tracy, representing the Toledo Y. C., and Otto Barthel, representing the West End Y. C., of Detroit. The following ex-presidents of the Association were also present: Hon. Geo. W. Gardner, J. E. Gunckel and J. O. Richardson, Jr.

The first matter to be considered were the amendments to the Sailing Regulations. They were submitted by Capt. Radder, the Association's delegate to the Yacht Racing Union of North America. The object of the amendments was to make the Sailing Regulations of the Lake Erie Association the same as those of the North American Union, excepting the classification. All the amendments were adopted. The classification of the North American Union was not adhered to for the reason that the measurement of a boat coming from salt water to the Lakes, or vice versa, would be changed anyway, and it was thought best to have 5ft. class instead of 6ft. classes of the parent organization.

Two additional amendments were offered by Capt. Radder and adopted. The first was that all yachts built or brought to the Lakes before Nov. 5, 1898, which measure over the class they have heretofore sailed in, shall continue to sail in those classes, provided the excess of measurement is due to the new rules; and shall be rated at the maximum limit of the class. The second amendment was that if the extreme draft of a keel boat exceeded the draft at the point of the girth measurement, whether it be aft or forward of that point, twice such excess shall be added to the girth.

All time allowance was done away with, every yacht rating at the top limit of her class, excepting in the first class. In that class are all yachts over 45ft. racing length, and an injustice might be done a boat of say 46ft. racing length if she were forced to sail against one of 80 or 90ft.

It was also decided to make a class of 20ft., to comprise all boats measuring 20ft. or under. The same rules to govern as in the larger classes.

The trial races on Lake Michigan to pick the representative yacht of the United States for the Canada's cup races was then discussed. Inasmuch as nothing could be done pending the receipt of the conditions covering those races, the matter was laid over.

Notwithstanding that the trial races will take place on Lake Michigan, making it a long sail for any boat from Lake Erie, it is thought that at least one boat, if not two, will come from the latter place. Considerable satisfaction was expressed at the prospects of a lively season next summer. An adjournment was then taken, subject to the call of the president.

The Capabilities of Small Yachts.

Cobourg, Nov. 27.—*Editor Forest and Stream:* In your last two issues are some interesting republications from the Field on the capabilities of small yachts. The consensus of opinion seems to be that as far as mere weathering a gale is concerned size in itself has little or nothing to do with safety, but model has; and this is precisely my opinion. On the latter point the difference of opinion between correspondents seems to be mainly as to the amount of good and harm inherent in a certain amount of overhang; and the last letter of Squaretail goes so far as to say that if length over all were the element taxed instead of length on waterline we should revert to plumb stems and flat sterns. Surely not, for if so all the efforts of designers for many years back to cut down skin surface to the last square inch are largely misdirected. I have crossed the Great Lakes for twenty years now, and have seen a good many different kinds of weather, and I have come to the conclusion that overhang in moderation is rather to be desired in a cruiser than otherwise, tending to buoyancy and dryness, although not perhaps to easy motion, and in any case it is the shape of the overhang, rather than the amount of it, which causes bad performance.

If the forward overhang is carried out to such an extreme that it becomes flat-floored the vessel must do more or less pounding in a head sea, as well as a considerable amount of windage when the bow is hove up. If the after overhang is carried out wide and full it tends to prevent the nose from lifting; but as a matter of fact it is difficult to combine such overhangs with a wholesome seagoing middle body, and if with such a midship section the overhangs are carried out merely far enough to develop good, easy diagonals and buttocks, I think there is little reason to fear that they will interfere with the boat's performance in a seaway.

I think a more important point in connection with modern overhangs is that in order to reduce above-water bulk and weight the sheer has been gradually cut down until it is now nearly a straight line, increasing vastly the chances of being "pooped" when running, especially with the wide, flat transoms of some of the modern boats. The after overhang of a seagoing cruiser should be well drawn in and tucked up. If this is done, and the decks well rounded, all the water a boat can pick up on her fantail will work off before it gets forward to the cockpit. As a matter of actual experience, the only occasions on which I have felt really anxious about a following sea were on the lower St. Lawrence in boats without overhang and with wide, flat sterns. Squaretail's references to the Atlantic liner and the torpedo boat are hardly happy or apropos. Even were the motive power the same in both cases there is a wide difference between the boat having ten or twelve beams to length, and traveling at an average speed of twenty-five miles, and the boat having four or five beams and making five or six miles, even if there were not also problems in connection with the mechanical construction which bear on the question of model and affect it.

No one, I fancy, will dispute the contention of another correspondent that a good sea boat must have ample displacement, or, as Jack would say, "lots of guts below water." But none of them seem to have brought out other points more important than the question of overhangs; one of these is the short keel and midship rudder, which is almost universal in modern boats, even when intended for something more than racing. Any one who has steered one of these boats off the wind with any sea on knows how hard and uneasy they are on their helms. In common with some others I have endeavored to mitigate this evil by separating the rudder altogether from the keel, and hanging it on a deadwood or scag of its own. This greatly eases the strains, but does not much lessen the uneasiness and necessity for incessant watchfulness. Zulu, whose lines I send you, was "easy" on her helm under any circumstances, but so quick that the helm could not be dropped for a moment, nor the steersman's eyes removed from his work. Another question bearing on safety and capability is that of rig. My own preference is and always has been for the yawl—in common with McMullen, Middleton, McGregor, and most of the single-handers; but whether yawl or schooner or ketch, I think nearly everyone who has done much sailing in the open water will agree that there must be more than one stick, if only for the purpose of getting enough sail on without long and heavy sticks aloft and carrying a heavy main boom. The old English cutter sailors so fully recognized the dangers and difficulties of running under such a rig that they carried a square sail for this purpose and kept the big boom lashed amidships, an example which might well be followed by some of the more modern and smaller boats.

The good sea boat must not have too much beam, less because beam in itself is a detriment as because (especially in combination with good displacement) it means a slow boat or a big and lofty rig to drive it. With a well proportioned and snugly and handily rigged boat there seems to be no reason why a trip to the West Indies should not be made without danger or even serious discomfort by two able-bodied men in a boat of 25ft. waterline, or why yachting properly so called should be exclusively the rich man's pastime. And it is pleasant after so many years of racing in egg shells—or canoes kept upright by plumbobs hung underneath them—to see some space in your columns given again to the cruising craft. The finest craft it has ever been my good luck to sail is the Mirage, a 10-tonner, rerigged and refitted by myself during the past summer—39ft. o.a., 31ft. w.l., 10ft. in. beam, and 6ft. draft—with a lateral plane well spread fore and aft, and standing room all over a cabin 14ft. in length; very strongly built, ballasted with seven tons of iron and lead, and neatly, if not luxuriously, fitted below; new sails, ample ground tackle, etc., etc. Mirage cost less than $1,500, and will with care last fifteen or twenty years; but, after sailing her for a month under various conditions, I cannot say that I think more overhang or less waterline length would have hurt her. Henry K. Wicksteed.

The Lateen Rig for Yachts and Iceboats.

Editor Forest and Stream:

In your issue of Aug. 7, 1884, you printed an account of the new Prince rig for sail boats, with plans, etc., which consisted in stepping the mast derrick-like on the side of the boat instead of on the middle line. The next year you again produced the plans of the novel idea, and recommended it as a very desirable improvement on the ordinary mast and gaff sail rig for iceboats. Your recommendation quickly took with the clubs, and since that time it has been widely adopted for iceboats everywhere that the Forest and Stream is read. Its success for sail boats has also been demonstrated. It will be noticed that it accommodates itself to all kinds of sails, square and fore-and-aft sails, lugsail, boom sail, and also admirably to the lateen sail.

George Prince.

Boston, Nov. 29.

Syracuse Y. C.

Syracuse, Dec. 1.—There has recently been organized a yacht club in the city of Syracuse by the name of Syracuse Yacht Club. The officers of the organization are: Com., P. I. Gross; Vice-Com., A. Van Wagner; Sec'y, Chas. J. Carroll; Treas., L. G. Van Wagner; Meas., Chas F. Russell; Fleet Capt., Chas. Halbritter; Fleet Surgeon, Dr. S. S. Bibbens.

The rooms of the club are 10 Snow Building, Syracuse, N. Y.

YACHTING NEWS NOTES.

The race for the Canada cup, off Toronto on Lake Ontario, next summer, will be the most important yachting event on the Great Lakes since the cup was raced for before, and won from the Vencedor by the Canada. The Chicago yachtsmen, who have challenged for the cup, have extended an invitation to the representative yacht clubs of Detroit, Toledo, Cleveland, Buffalo and Rochester to enter boats in the trial races to be held early next season, to the end that the fastest boat on the Great Lakes may be selected to race against the Canadian cup defender.

Interviews with several members of the Buffalo Y. C. on the possibility of Buffalo building and entering a 35-footer in the trial races at Chicago, bring to light the fact that such a proposition is out of the question. The general impression seems to be that there is not the real enthusiasm in yachting among the Buffalo yachtsmen to warrant such action. While there is money enough in the Buffalo Y. C. to build as finely designed a yacht as could be built anywhere on the Great Lakes, yet there is an apparent lack of love for the sport, which is necessary to put that money into circulation for such an object.

This fact is deplorable. Buffalo is next to Chicago in size among the cities of the Great Lakes, and the Windy City yachtsmen naturally suppose that the local lovers of the sport will take an interest in the coming race sufficient to enter a boat in the trial events. But they will be disappointed. A fast 35-footer would not cost much, and there are at least six members of the Buffalo Y. C. who could defray the expense of one, and never notice the drawing on their bank account. But the spirit which predominates in the club house at the foot of Porter avenue is evidenced by the excuse credited to a yacht club member when he was recently asked to go in with several other members and purchase a little 16ft. catboat for next year's local races, the expense of which is little over $35. He said: "Why, I may be dead next year." That is the spirit that is holding Buffalo back in yachting.—Buffalo Courier.

It is so natural and easy to write sea poems and so very difficult to write good ones that many persons try and almost as many fail sadly. Mr. Thomas Fleming Day, the well-known yachting writer, has tried a good many times in the volume recently issued under the title of "Songs of Sea and Sail," and has succeeded in writing some very good poems and few poor ones. A life-long lover of sea and ships, Mr. Day knows both thoroughly, and this sailor spirit, with its accompanying technical knowledge, has served to place even the least meritorious of the poems on a distinctly higher level than most work of the kind. Many of the poems are remarkably good, the sentiment is genuine and they have the right ring. "The Coasters," for instance, with its appropriately rough refrain, is a fitting tribute to a class of vessel whose merits attract little attention beside the more showy qualities of the yacht or warship. "The Ships" is a stirring poem, and "On the Bridge" and "Making Land" are both good. "The Belfry of the Sea," the "Sailor of the Sail," "The Landfall" and "The Homeward Bounder's Song" are all worth more than a second reading; in fact, the book is a good one to have at hand through the winter evenings, when its unmistakable odor of brine and spray gives the needed flavor to the quiet comfort of the fireside ashore. The book is published by the Rudder Co., New York and London.

An adjourned meeting of the Lake Sailing Skiff Association was held in Toronto on Nov. 23, at which it was decided to leave optional the use of an outboard or underbody rudder in the 18ft. and 16ft. classes.

The following sizes were decided on: 18ft. class, planking ½in., frames 1 1-16in. square; 16ft. class, planking ⅜in., frames 1in. square; 15ft. class, planking ¼in., frames ¾in. Skiffs are to be measured with dead weight on board. The walker cup will be sailed for on Dominion Day. The Association now includes the Royal Canadian Y. C., Queen City Y. C., Royal Hamilton Y. C., Victoria Y. C., Royal Toronto Sailing Skiff Club, Parkdale Sailing Club.

The winter of 1898-99 has broken all records, both in date and severity, practically opening on Thanksgiving Day, Nov. 26, with a snowstorm along the Atlantic Coast, some 3in. of snow falling in New York city. During the afternoon of Nov. 28 a violent northeast gale struck the coast, snow beginning to fall in New York at noon and continuing until early the next morning, by which time some 10in. had fallen. The gale was bad enough about New York, but the center was off Boston, where the large passenger steamer Portland, from Boston for Portland, Me., was lost with all on board, including many passengers, the wreck being driven ashore near Highland Light on Cape Cod. It is not yet known how many other vessels, mainly coasting schooners, were lost, but Boston Harbor was full of wrecks, including an Atlantic steamer blown ashore. Great damage has been done to yachting property in different places, notably in Port Jefferson Harbor, always considered a secure winter anchorage. The coasting schooner Mary E. Cuff dragged her anchor in the harbor and drove down on the steam yacht Halcyon, Com. Howard C. Smith, Stamford Y. C., sinking her, afterward going ashore herself. The schooner Alsacienne, better known under her original name of Norseman, was moored permanently in the harbor, with a strake of plank off on each side to air her frames; she filled and sank. The schooner Comanche, the cutter Wayward, and the cutter Wasp were driven ashore. The steam yacht Rival was sunk and the Parthenia lost her bowsprit and sustained other damage. Smaller yachts in the harbor were also sunk or damaged badly. The yachts laid up at Sag Harbor, Greenport and many other Sound ports were more or less damaged. The schooner Magic, recently purchased by J. S. Clarke, of Pittsburg, from A. W. Mott, left Greenport for New York on Saturday morning in fair weather, but was overtaken by the gale after passing Plum Gut and finally lost her bearings in the snowstorm, her compass being unreliable. She finally anchored near shore and rode out the gale on a lee shore until Monday morning, when it was found that she was near the Thimble Islands. About 5 A. M. on Sunday, in the height of the gale, she was nearly run down by a large ocean steamer. The house of the Douglaston Y. C., in Little Neck Bay, was entirely destroyed. Much damage was done to the smaller yards about Quincy and Dorchester Bay, shops being flooded and many yachts thrown down from their blocking on the beach.

On Dec. 3 the work of demolishing the buildings at Nos. 37, 39 and 41 West Forty-fourth street, New York, was begun; the legal transfer of the property to the New York Y. C. having been completed. The contract for the construction of the new club house has been let to the Sturgis & Hill Co., and the work will be carried on as rapidly as possible.

Coronet, schr., has received a new outfit of canvas from Wilson & Griffin, and on Dec. 5 she sailed on a long cruise to Bermuda, Cuba and British Guiana. Her new owner, F. S. Pearson, has his wife and children with him. Captain Crosby is still in command.

On Dec. 1 the navigation class of the Seawanhaka C. Y. C. was opened for the winter, Dr. F. E. Sondern, a member of the club, being in charge.

The new challenge for the Quincy cup, designed by C. D. Mower, is already nearly completed. She is designed to the limit of the class, 21ft. l.w.l., but is of extreme construction, the planking being but ⅜in. and the deck ¼in. The bottom is covered with canvas over the cedar planking.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

$4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 17, 1898.

VOL. LI.—No. 25. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photographs is given elsewhere.

The ancients esteemed hunting, not only as a manly and warlike exercise, but as highly conducive to health. The famous Galen recommends it above all others as not only exercising the body, but giving delight and entertainment to the mind. And he calls the inventors of this art wise men, and well-skilled in human nature.
Somerville.

SNAP SHOTS.

WE have given generous space in recent issues to the New Jersey game stocking enterprises, because this is a branch of work which, now in its infancy, is destined to receive constantly growing attention, and to be rewarded by substantial results. Thanks to the activity of the New Jersey Commission, the ring-necked pheasant may now fairly be counted as a game bird of that State; and to-day we quote characteristic reports from sportsmen in various counties where imported quail have been put out to restore the supply. The work has been done under the personal supervision of Mr. Charles A. Shriner, the State Fish and Game Warden and executive agent of the board; and it is a pleasure to make recognition of the common sense methods he has employed and the businesslike manner in which the interests of the public have been administered.

It is announced that the project of a deer park for Long Island, suggested in these columns some time ago, will be taken up by the Legislature this winter. As we have pointed out, there are wild lands on the island admirably adapted to the purpose, and such a State institution might be established without interfering with any private rights and privileges now enjoyed. The expense should be small; the deer are ready to hand; and the breeding station thus provided would stock the mountains of Sullivan county and the Catskills.

The American Commissioners who were sent to investigate the Hawaiian Islands discovered a curious condition governing the fisheries. Along the Hawaiian coast, about a mile from the shore, are coral reefs, and between these reefs and the shore are the fishing grounds. When the land of the islands was first parceled out by the crown, grants of lands along the coast carried with them the exclusive privilege of fishing for a mile from shore. The holders of such lands long ago formed a trust for the konihiki, or monopoly, of the fishing; fixed prices to suit themselves, and proceeded to get rich. The old grants have been tested in the courts, and are held to be vested rights. In acquiring the Hawaiian Islands the United States has thus annexed a full fledged fisheries trust. It is reported that the Commissioners will recommend the condemnation of the fishing grounds in the public interest.

The New York League at Syracuse last week adopted a resolution endorsing the principle of FOREST AND STREAM'S Platform Plank, voting to petition the Legislature to forbid at all times the sale of ruffed grouse and quail. Vermont has just adopted a prohibition of the sale of ruffed grouse. New Hampshire sportsmen have assurance that the anti-sale plank will be considered at Concord this winter. A Minnesota senator writes to us for information that will assist him in an effort to secure a similar law there. The Legislature of Connecticut will have a measure forbidding the taking of game for sale. Even in Massachusetts, with the Boston market open the year around, the sportsmen's associations are coming out in favor of the Plank. The idea has been implanted. It is talked about. Discussion means gain in popularity, and ultimately it will mean adoption.

The field trials of the Eastern and Continental Clubs this year were marked by a spirit of true sportsmanship throughout, which made the meetings the most satisfactory and thoroughly enjoyable of recent years. The commercialism which in former days was so largely a dominating force, giving rise to jealousies embittering the meets, has passed entirely away; there was this year not the remotest suggestion of it. The trials were conducted by sportsmen for the sake of the sport; generous emulation and perfect harmony and good feeling prevailed from the casting off the first brace to the final hand clasp at parting, when everyone declared that he had had a good time, and would come again. Such a restoration of field trials in America to a place of respect and dignity in the calendar of the year's events is reason for genuine congratulation of all who are interested in the dog as a field companion. We shall be much in error if the immediate future shall not witness a growth of field trial interest, and such popularity for the annual events of the clubs as has never before been enjoyed.

This is putting field trials on the plane they always should have held. It was the incroachment of purely commercial interests, with the usurpation on the part of owners and handlers who knew no other motive than a mercenary one, that eventually caused many of the early supporters to withdraw from active participation. The true interests of dog breeding and training and field shooting will be advanced by the elimination of what may be termed the professional element from field trials.

Secretary Spencer, of the Alabama Field Trials Club, reports that birds are plentiful at Madison, where the meet will be held in February, and the outlook is for a large entry list and an increased number of visitors. The club's annual gathering is a most enjoyable occasion; and the club is developing a substantial influence upon the game interests of the State. For one thing such a meeting of representatives of different sections gives opportunity for discussion of the common cause; public opinion is created and fostered; and it is expected that as an outgrowth of the work of the Alabama Club, the present inefficient and inadequate game law will be superseded by one drafted on advanced lines and in keeping with the standards of the day.

Were an observer to draw inferences from what he saw in some sections of the Adirondacks, accepting the dictum that "whatever is is right," he might conclude that deer hounding was a lawful mode of hunting. In Game Protector Beede's district, for instance, in Essex county, the woods have echoed day in and day out the bay of the dogs on trail. The experience told us by a still-hunter in that district is suggestive of the way things went there in the deer season; on two separate occasions after long stalking he had nearly come up with his game, only to have it each time startled and driven from him by hounds. As for Mr. Beede, the hounders doubtless said of him as Elijah at Mount Carmel to the prophets of Baal when he mocked them and said, "either he is talking, or he is pursuing, or he is in a journey, or peradventure, he sleepeth and must be awaked."

Twelve hunters were mistaken for deer and killed by other hunters in Wisconsin in the past season. If this reckless shooting continues, no prudent man will venture into the woods, and whenever a father of a family declares his intention of deer hunting in Wisconsin it will be in order to appoint a commission *de lunatico inquirendo.*

To inveigh against this form of manslaughter may be futile; to mitigate the exceeding and unspeakable outrages of these repeated killings is beyond human power; and all the talking and writing in the world will not stay the hand of the fatuous imbecile who is predestined to slay his brother man by mistake for a deer. But on the other hand it is certain that silence can avail nothing, and the talking and writing may do some good. Let every father then exhort his son, and every son his father, the brother the brother, and every man every other man, and in particular each one himself, never to shoot until he knows—not thinks he knows, but knows—what he is shooting at.

The Maxim gun shoots with prodigious rapidity, discharging automatically by its own recoil a rain of six hundred bullets per minute. In a lecture before the Engineering Society of Columbia University, last week, the inventor related that the Sultan of Turkey once ordered one of the guns, and when it was received, mindful of how it continued to shoot when once set going, he ordered that, not even being unpacked, it should be put away in a safe place in the royal museum of arms, where it might be powerless to wreck the empire. The Sultan is a prudent person; he doubtless understands human nature well enough to surmise that the didn't-know-it-was-loaded idiot is not exclusively indigenous to the American continent; and his Oriental imagination had pictured perhaps what would happen in Constantinople if the idiot and the Maxim gun should get together.

Commissioner Titcomb calls our attention to the fact that in a recent note of the deer in Vermont we said that under the old law hounds were permitted. This was a mistake; dogging was against the law; but there was no provision by which an officer could legally kill a dog running at large and pursuing deer, if the dog wore a collar and was licensed; and the dogs have chased deer in Vermont at all seasons of the year. Under the statute any dog chasing deer may be killed; and it is expected that this will save many does heavy with young. Another good point is that owners are held responsible. The New Hampshire Commissioners suggest the expediency of a similar provision; for, although the use of dogs for deer hunting is forbidden, the game is continually harried by hounds running loose, with effects particularly disastrous in the breeding season.

We observe, by the way, that the letterhead employed by Mr. Titcomb, being that of the Department of Fisheries and Game, has for its device the arms of the State, and the crest is a buck's head. This is significant, for it means that in the year 1821, when the coat of arms was adopted, the deer was a feature of Vermont worthy of a place in the State's heraldry. Certainly, at that period no one could have foreseen that half a century later the species would become extinct in the Green Mountains, that it would be restored by importations from "York State"; and that in course of time this heraldic buck's head would adorn the stationery of a deer protective department.

The ultimate success of the Vermont deer restocking enterprise affords one of many illustrations of the truism that the preservation of a game supply is simple if the game supply is preserved. You cannot have your cake and eat it too. What has been accomplished in the Green Mountains with imported deer has been done with the New Hampshire moose by the expedient of a long-term close time. The report of the Commissioners, printed in another column, tells us that the outlook for the moose stock in the Connecticut Lakes country is very promising, owing to a strict observance of the law, which gives this species protection until the year 1901.

One service the wheel does many a rider on country roads is to put him closer to game and other wild creatures than ever he could get afoot. For the man who would hunt without a gun the wheel has this peculiar advantage. A correspondent who visited Maine in the fall tells us, "On two different occasions I wheeled within two rods of grouse in the road." The secret of it is that the movement of the bicycle is so noiseless and so swift that the wheelman is upon the game before it has time to realize his approach.

The organization of the Blue Mountain Club for shooting in the Blue Mountain Forest, the Corbin game park in New Hampshire, has not yet been perfected; but some hunting was done in the Forest this year, the game killed comprising six elk and twenty-three deer.

The next issue of the FOREST AND STREAM will be the Christmas Number; and in its pages will be provided a fund of good reading.

The Sportsman Tourist.

On Forest Lakes and Trails.

Probably few persons realize the fact that one of the most extensive forests of the world is within twenty-four hours' ride of the city of New York.

It is said that the forest lying north of the St. Lawrence River is surpassed in extent only by those of the Amazon, Siberia, Central Africa and the northwestern part of our continent. It stretches a thousand miles south from Hudson Bay toward the St. Lawrence, and is 1,700 miles in width from east to west.

Within its range are the Laurentide highlands, the oldest known geological formation; not lofty elevations, but rolling in long, graceful, billowy lines, now covered with the waving forest, but in the remote antiquity of the glacial period buried, according to Dana's computation, to the depth of nearly two miles under the ice which flowed thence over the Green and White mountains, the Catskills, and down to the sea. It is an ancient land, strangely preserved intact in its primeval wildness and beauty.

The pioneers of civilization from France, touching the north shore of the St. Lawrence, pushed westward in their nervous haste of exploration, leaving the savages and the wild beasts in possession of the vast, somber forest. Since those early days the severity of the winter and the indifferent nature of the soil have combined to deter the enterprising Canadian from attempting seriously the conquest of the wilderness.

Indians are still found in their ancestral haunts. Some of them are now the proteges of the Hudson Bay Company, and bring their furs, as in the former days, for sale or exchange; others are guides to the hunting and fishing grounds of their fathers. The moose, the caribou, the bear and the fox continue to tempt the patient hunter; the beaver builds his dams across the streams; the loon and the wild duck breed along the lakes. The inland waters abound in game fish; the brook trout (*fontinalis*), the great lake trout (*namaycush*), the ouaniche, the maskinonge, the dore and the pike. The primitive woods remain, bowing and bending under the weight of snow in the winter, and in summer radiant beneath the warm Canadian sun that tempers the coolness of the interminable shade.

There stand in solitary grandeur the last survivors of the old pines of the East. About them cluster the tall dark spruces, the hemlocks, cedars, maples, the white-stemmed birches, the smooth-barked beeches and fragrant balsams, not yet reached by the greedy axe and still protected by their inaccessibility. Along the water courses the lumbermen have hewed out the valuable timber, and the spring floods have borne it through many a turbulent rapid to the mills below, but the larger part of the region is a profound solitude, covered with a dense forest and little disturbed except by the solitary trapper and hunter.

Picturesque lakes of all sizes and forms, and of divergent beauty, bordered by their faithful friends the trees, the untiring condensers, lie in long chains and systems among the hills and mountains.

The ice which creeps over them in November, and is the playground of the restless winds and whirling snow through the winter, does not disappear until May.

April is not the birthtime of the Laurentian world, but with the ice goes winter, and summer quickly succeeds. Spring is superfluous, and has no place.

The trees burst into foliage, and the wild grasses spring up where the sunshine falls. There is a sound of wings in the air, and the loons and ducks, sweeping up on the south wind, drop into their familiar haunts; the heron and bittern again stalk through the swamps; the singing birds come "jubilant, noisy, triumphant"; the beaver, leaving the wintry depths, cleaves the surface of the water; the air is soft and the time has come to travel the forest lakes and trails.

Three summers ago I was in the main camp of the Laurentian Club on Lac la Peche, in the southern edge of the great forest, with some friends. While we were waiting idly for a rain to cease and the sun to shine an Indian from the Hudson Bay Company came in, and we obtained information from him about an attractive lake of which we had heard, situated some seventy miles to the north. He sketched a rough map upon a piece of pine board, showing its location, and the waterways and trails leading to it, which one of our guides copied upon a sheet of birch bark. Provided with this, we decided to make a trip to the lake. A box was packed with provisions from the storehouse, and two small tents were put in canvas bags. These articles, with blankets, were sent in advance about forty miles through the woods to a log camp of the club on Lake Dunbar, upon the route we were to take.

The canoe selected for our use was a Peterborough, a strong and comfortable boat, built of basswood, 19ft. long, 37in. wide, and 12in. deep.

Our party for the excursion, exclusive of guides, consisted of three persons, one of whom was a lady experienced in forest life and travel. Our two guides, Pierre and Noel, were Indians, both skillful voyageurs. Pierre, the head guide, was tall and straight; of gentle manners, with a voice soft and musical, very intelligent and trustworthy. He had all the natural dignity of an historical Iroquois chief.

At 8 o'clock on Wednesday morning we placed our few personal effects—rifle and fishing tackle, and one day's provisions—in the canoe, and embarking upon Lac la Peche, paddled away for the north.

We traveled fifteen miles that day, and about 4 o'clock in the afternoon reached our resting place for the night, a spacious log house on the shore of Lake Pizagonke, remarkable for its fine scenery, and the headquarters of the Shawinegan Club, a Montreal association, whose hospitality was generously extended to us. Beyond this lake we were not to have roads and scarcely a civilized sign.

We were afloat early in the morning, for our next camping place was thirty miles distant. When we pushed from the reedy shore, we entered a dense, white fog that hung over the lake. We could hear the call of the loons from the misty depths, but we could not see them, nor the kingfishers, whose disjointed notes we heard.

Once a blue heron loomed silently and weirdly into view, but a few strokes of her long wings carried her into the fog again out of our sight.

As the sun rose higher it dissipated the fog, and during the rest of the passage down the lake we had a succession of fine views.

For two miles or more we paddled close to high, perpendicular cliffs of Laurentian rock, whose savage ruggedness was softened and half-hidden by pines that clung to their sides from base to summit, rooted in the seams and scars made by centuries of frost. The cliffs terminated in a lower shore, thickly covered with timber. Across the lake the hills rose, ridge above ridge, "pile above pile of fresh and stately verdure."

The lake was nine miles long, and when the canoe slid over the lilypads into the soft grass of the further shore we were glad to land and take the trail to the next lake.

I must not omit to relate one incident of the morning. As we approached a narrow part of the lake a bull moose suddenly came out of the woods on our right front. Pierre, who was in the stern of the canoe, saw him first and whispered "Moose!" The guides stopped paddling, and we watched the movements of the monarch of the woods. He walked vigorously to the water through some bushes that lined the shore. At the edge of the lake he stopped, facing the water, and tossed his big antlered head right and left, and sniffed the air. The sun was behind us, shining in a clear sky, and the light breeze was in our faces. It was evident that the moose did not see us. Apparently he intended to swim across the lake, for after reconnoitering an instant he strode into the water until it nearly covered his body, only his huge head and antlers and the upper line of his brown back remaining visible. Whether he saw us or imagined an evil presence, or whether some moose omen appeared to him in the sky above, we could not determine, but he turned and went out of the lake with moderate haste and plunged into the woods. He had been within easy shooting distance for five minutes at least. A trusty rifle was lying on the floor of the canoe, but it was Aug. 28, with still three days untold of the then close season, and we did not shoot.

What Pierre and Noel would have done had they been alone it is not necessary to consider. They were experienced hunters of moose and caribou, and Canadian Indians as a race are not noted for constant and unswerving obedience to the game laws. However, it is only fair to them to say that our forbearance and the reason for it seemed to meet with their approval.

Leaving Pizagonke, we traversed lakes Croche, Desiles and Antikiagamac, all connected by easy trails. A portion of the latter lake was luxurious with lily plants, and among their broad leaves some big pike were sunning themselves near the surface, and lazily moved away when the canoe approached them.

Passing through the outlet, we twisted down a creek as crooked as the folds of a steam radiator, emerging by noon upon the Mattawin River, within the territory of the Laurentian Club.

The Mattawin is a tributary of the St. Maurice River, and is about 100 miles long, running through the forest its entire course. Falls of 40ft. or more at intervals mark its precipitous descent. Where we struck it, and for the seven miles we followed its windings, the current, although swift, was smooth except for two or three rapids. Along the margin were numerous stretches of bright yellow sand dunes, on which we saw occasional footprints of black bears and caribou.

Now and then we startled a black duck from her nest; several times flocks of sheldrakes seemed to challenge us to race with them. As we approached the quiet coves where they were feeding, they would peer out, swim in different directions for a minute or two in an uncertain way, and then there would be a sudden glitter of wings and a rush of the whole flock on the waterline at wonderful speed. The canoe, racing with current and paddles, was no match for them. Kingfishers were numerous, as they are everywhere by the waters of the Canadian woods, dropping from overhanging branches upon their finny victims, and as they fly rattling off their castanet notes. Along the shores we saw several of the large red-headed woodpeckers hammering on the boles of old trees.

About 2 o'clock we entered the mouth of the Castor Noir River, a stream of clear, cold water, paying tribute to the Mattawin, and landed near the base of a line of imposing granite cliffs, whose summits were crowned with white pines. The river rushed noisily through a deep gorge in the mountains. It was navigable by the canoe, but contained many rocky, foaming rapids, which forced us to make as many portages while ascending the stream eight miles to its source. The scenery was very wild. At some points the densely wooded shores crowded in upon the river, making narrow passes, through which the water ran swiftly in the dark shadow of the trees, while at others the bed of the river was choked with big brown boulders, so that the guides found it difficult to force a passage.

We crossed a beaver dam, the guides getting out upon it and pulling the canoe over. The barkless branches of which it was built were of a fine whiteness, having been washed by the pure water and bleached by the sun. We crept over sandbars, over which the water was so shallow that we could feel the flexible bottom of the canoe wrinkling under us. So with much portaging and hard paddling we pushed our way up during the afternoon, having the evergreen woods on either bank and views of rugged hills over the tops of the trees. When within about a mile of Lake Dunbar, the source of the stream, further progress by water was made impossible by rapids that came tumbling down to meet us, and the guides hoisted out the canoe, and we took the trail.

As we climbed the ascent, we had frequent glimpses of the river, that rushed, singing, over the ledges in four successive leaps, resting in as many foam-flecked pools before reaching its more level bed below.

We came out of the woods upon the surface of an immense ledge that formed the rim of two upper pools to a view at once rugged and beautiful. Below, on the right, was the valley we had ascended; a sea of waving tree tops. The opposite shore of the river was a mass of boulders and angular rocks.

Beyond, the mountain, a pile of gray stone, dotted with scattered trees, rose abruptly to the height of 1,200ft. In front of us the water hurried foaming over the granite shelves, its shattered column sending off a thin mist that drifted glistening in the sunshine over the deep, pebbly pools, the natural home of the trout. These are pools which no sane angler can neglect, so now the light bamboos are jointed, the reels slipped into their grooves, the filmy leaders hung with bright-winged flies, long casts are made from the rocky floor into the turmoil of broken, rushing water to the foot of the cascades. The flies flutter down through the silvery spray into the white foam; the trout leap with an energy born of the swift water; the strike is made quicker than thought can come; the slender rods bend and spring as the captives dash around the pool until exhausted, they are led gently into the net and laid side by side upon the brown ledge, beautiful as the trout of a mountain stream can be.

Our camp on Lake Dunbar was a mile from the falls, a log house flanked by a guide house and a bark kitchen. Pierre and Noel soon had a fire roaring in the throat of the big stone chimney.

They cut a heap of spicy boughs from neighboring balsams and deftly laid them upon the rude bed frames. Blankets were spread over them, and we were ready for the trout supper and sleep.

We found here our tents and provisions, which had been sent in advance. The next day was rainy, and we kept the comfortable camp. We piled logs upon the fire. We read. We watched the clouds as they drifted along the sides of the mountains and sifted through the pine forest, and we made attacks upon the blueberries that grew in luxuriant abundance in the clearing, even up to the log doorstep of the house.

The next morning was fair and bright, and we made an early start.

We paddled up the lake, walked at a lively pace over a two-mile portage, and put our canoe into the Grand Castor Noir Lake, a lovely sheet of water, decorated with green islands—a gem of the wilderness, perfect in its beauty and solitude. Its scenery was in striking contrast to that of the following portage, which was a rough trail through a gray old wood, littered with rocks and trunks of generations of fallen trees in all stages of decay, some of them only traceable as lines of green moss.

The next lake in our course was seven miles long, and it was high noon when we reached the lower end and landed to eat our luncheon. Here was a heap of tangled logs, once the shelter of the hunter, and near by, white and shining in the sun, was the complete skeleton of a bear, killed and flayed no doubt by the owner of the cabin.

Crossing the foot of the lake, we followed a trail that led to Lake Souci, and pitched our tents in a grove of spruce and balsams.

At the rear of the camp a talkative stream dashed over a rocky bed, its chatter echoing through the woods. Within ten minutes' walk were two large lakes, connected by this little river. We were now about fifty miles from Lac la Peche, and it being Saturday evening we decided to remain here until Monday.

While casting for trout on Lake Souci in the canoe, a jolly young bear with a coat as black as jet came running down through a rocky cañon to the shore. When he saw us he stopped and looked at us with evident curiosity. As he slouched away, we shouted at him; he stopped again on the trunk of a fallen tree and turned his face toward us for an instant, then shambled off, and we saw him no more.

Running close under some perpendicular cliffs that rose out of the lake, we were puzzled at the sight of some circular wooden frames, like hoops, perched on apparently inaccessible shelves of the rock above the water. The guides told us they were used by trappers to dry their beaver skins, and were placed there so as to be out of reach of the inquisitive and destructive bears.

We broke camp on Monday morning, climbed over a low ridge, waded across a grassy bog that absorbed us to our ankles; picked our way over a bed of large rocks, so thickly set that we could step from one to another, and came to a branch of the Wessoneau River, where we launched the canoe. The river, however, was only navigable for short stretches, and we were obliged to foot it over an old Indian trail that followed the windings of the stream. We made eight portages to avoid swift water and falls, crossed two small lakes and a solemn old swamp, and as the sun was declining emerged from the woods upon a bluff and looked down upon the lake we had sought for five days.

It was about five miles in diameter, indented by deep bays. The Indians called it Waulumkok, meaning the lake with much sandy shore.

John Burroughs' saying that "water makes the wild more wild" is peculiarly applicable to this lake. It rests in a basin, guarded on every side by high hills densely covered with the never-ending forest. The trees begin at the edge of the water and climb the slopes, their waving tops stretching away in graceful, undulating lines to the rim of the horizon.

Looking from the high bank over the blue water for a fitting camp site, we saw on the far shore a line of shining sand, and the guides advised us to cross to it. We were fifty minutes in crossing, but the intelligence of the Indian was vindicated, and it proved to be an ideal spot for a camp.

A sandy beach lined the edge of the woods for three-fourths of a mile, having a gradual slope outward. At its inner margin dunes of considerable height showed the effect of the mingled force of waves and winds. Above the dunes was a low bluff set thick with pines, spruces, balsams and birches. There, where the trees were thinnest, the tents were set up under the far-reaching arms of a tall, vigorous pine.

Examinations previously made of similar pines in these woods, for the purpose of determining their age, furnished data for the conclusion that this old patriarch was basking in the sunshine and tossing its sturdy branches in the stormy winds when De Salle and Champlain were pursuing their brilliant careers, and was keeping watch over the lake when, in the year 1534, Jacques Cartier was exploring the St. Lawrence. We gazed at its ancient form and then upon the two red men sitting beneath it at the entrance of their tent, and we felt that the tree belonged to them and their history, and not to us or

our times. Near the camp a spring sent a rivulet of sweet water trickling across the sand of the beach.

As we sat that night by our generous camp-fire of dry balsam logs there was a sense of complete isolation from the civilized world. The silence was profound and unbroken, except by the owls and the ripple of the small waves on the beach. We were on the shore of a lake unvisited save by trappers and by the enemies of the primitive pines, who made a foray against them through this region forty years ago. Until our visit probably no white woman had seen its wild waters.

That there were many native dwellers in these solitudes was shown by the multitude of tracks of birds and small animals that we saw on the sand when we landed. No doubt the smooth beach was a promenade for all the residents in the vicinity.

The morning after our arrival we set out in our canoe to gratify the anglers' curiosity and test the unknown waters. They responded generously, and yielded to the cast of our two lines 55lbs. of fish in two hours and a half. The average weight was about 6lbs. They included the maskinonge, pike and the namaycush. The last differed from any of the great lake trout we had seen, in that the flesh was of exceedingly delicate texture and of a light pink color. All these different fish were caught in the same deep water, by the side of a long ledge of rocks. The largest lake trout we captured weighed 8½lbs. The largest maskinonge weighed 20lbs. His capture was the event of the day and a topic for the camp-fire talk at night.

The adjoining woods abounded with partridges, very simple-minded and familiar. Mink were plentiful, running in and out among the rocks along the shore, and an improvised trap yielded one as a specimen.

We remained several days and unwillingly folded our tents for the return to the higher civilization of Lac la Peche.

On our way back we came upon a trapper's camp in the woods which exhibited the results of many an assault by the owner upon the wild beasts and birds. Wooden frames were scattered among the trees, on which skins of bears and other fur-bearing creatures had been stretched. Bits of fur were still fluttering from their edges and lying on the duff, and feathers, wings and feet of ducks and partridges littered the ground about the cabin. These, with scattered skulls and bones of bears and smaller game, told the story of the successful hunter and trapper.

Behind the camp was a grassy ravine, the green pathway of a small brook, a haunt evidently of mink, for there we found a trap, a miniature deadfall, offering its treacherous hospitality to the little brown traveler. The owner of the camp was not there, but we learned afterward that he was an educated Frenchman of good name who, following the example of some of his countrymen in the early days of the Canadian colony, had buried himself in the wilderness, living upon his wild companions, but still retaining connection with civilization, from time to time visiting Montreal and Quebec.

At another place in the woods were the antlers of a caribou, but these had been shed by the living animal and had lain for a winter on the ground, being much gnawed by woodmice. Although shed every year, the antlers are seldom found. Go where you will in these woods, the red squirrel is always your companion. Wander to the remotest depths of the forest and the vivacious little animal darts in front of you, or in a state of high nervous excitement chatters to you or scolds you from the thick tree tops. The ground under the trees is littered with the husks of his repast.

During our trip we saw in their native haunts the moose, the black bear, minks, partridges, blue herons, hawks, loons, wild ducks, large red-headed woodpeckers, owls and the friendly moosebird, besides a variety of small birds.

The fishing for trout (*fontinalis*) was all that an ambitious angler could desire. We found them to be unsophisticated, as becomes trout of wilderness waters, bold and reckless in taking the fly, often impatiently vaulting out of the water to meet it as it fluttered downward through the air. They were good fighters, their activity being stimulated no doubt by the coolness of the waters. The weather was fine; we had only two rainy days on our trip. The climate of the region in summer is agreeable, the days are warm and sunny, the nights cool enough for blankets in camp.

There is an occasional frost late in August, but the grasses by the shores and in the meadows retain their summer colors until the middle of September. There are few heavy rainfalls until October. I remember one, however, in the year 1894, early in September. We had just returned after a long outing to the La Peche camp, and were scarcely under the shingled roof, when the worst storm of years set in. It came up from the southern Atlantic coast. The rain fell continuously for twenty-four hours, driven by a gale of wind. Streams ran through the camp. The air was full of sounds of the woods, most of all the dull roar of the deep masses moved by the tempest. The forest trees, usually so imperturbable and serene, seemed to exult in the tumult. They tossed their arms aloft and shook the water from their glistening leaves in showery spray.

All the bridges on the wood road to the settlement below were torn away by the torrents. Philerum, the guardian, who, rain or shine, daily traveled the twenty miles to and from the mail station, was compelled to swim his horse across the swollen, bridgeless streams and chop away the trees that had fallen across the forest road. The earth of the low mountain opposite the camp became saturated with water, and at intervals along its side broke loose from its ancient bed and slid down into the lake, carrying with it rocks and trees, making a clatter and roar and splashing fascinating to hear and see.

But in the morning of the second day the sun rose in a cloudless sky, and the usual fine weather of the Canadian summer was with us again.

JOSEPH W. HOWE.

A correspondent of a Quebec paper says: "Trout are so plentiful in Granville Moss that while one man is fishing for them another is obliged to stand by the hook, with a stick, to prevent more than one from biting at a time!"

Natural History.

Trees.

Editor Forest and Stream:

I had expected that Mr. Hardy's questions about trees would receive a full answer before this from some one familiar with the subject. Up to date, Nov. 30, no complete answer has appeared, and as I am snowed in, with spare time on my hands, I will answer the questions to the best of my knowledge.

If I should make technical mistakes, will the experts please correct me, withholding sarcastic criticism. Being snowed in, I am unable to get to a library for books of reference, and must depend wholly on memory. However, I think I can trust my memory, for the subject is one to which I have devoted much time in study and experiment.

I shall divide Mr. Hardy's questions, and shall number them for convenience.

No. 1.—"Is the sap in the same tree all of the same quality in every particular?"

Answer.—No, there are two kinds of sap in all trees—the crude sap that is imbibed by the roots and ascends through the wood cells to the leaves, and the elaborated sap, so called after it undergoes a chemical process in the leaves, which flows to every growing part of the tree.

No. 2.—"If so, how does part make bark, part leaves, and in case of nut and fruit-bearing trees, the fruit? In case of a nut-bearing tree, if the sap is all the same, how does part form the shell and part the meat of the nut?"

Answer.—These questions would indicate that your correspondent is unacquainted with nature's plan of vegetation. Perhaps he asks the questions with a feeling that they cannot be answered, and he would be right in so far as brief answers are concerned. His questions are as broad as the whole vegetable kingdom, and can be completely answered only by a comprehensive description of nature's plan for vegetable growth.

I suppose it is understood in a general way that plants purify the air for animals, and manufacture all the food which they require. Plants purify the air by decomposing carbonic acid gas, releasing the oxygen and retaining the carbon to help make vegetable tissue. Plants make food for animal life by changing inorganic matter into organic matter, largely making use of the gases which compose air and water. This sort of book argument is all right for the initiated, but it is all Greek to the average reader, so I will get down to business and try to show what a tree is and how it makes growth.

If we examine a flower soon after blossoming with a microscope, we find a little sac in the ovule, which is called the embryo sac. At one end of the sac we should see a roundish substance, like an atom of pulp. No action looking to growth takes place unless the ovule is acted upon by pollen. When acted upon, the little atom of pulp commences to grow and becomes a cell. The cell divides and continues to increase by division until it becomes the plantlet in the seed. The plantlet usually consists of a stem, a rootlet and seed leaves. Take a squash seed and examine it, and we find the meat in halves, and the halves are seed leaves and grow out of the ground, and perform the work of true leaves. The nutriment that caused the plantlet to grow was stored in the seed leaves or meat. Without the nutriment stored in the seed leaves, the squash could not grow. The nutriment was stored beforehand, and this is nature's plan of growth from the seed. There are changes almost without number, but they can be traced to a common design. Sometimes the seed leaves are so changed as to be unable to perform the functions of leaves, like the nuts of trees, which remain underground. The maple tree seed sends its seed leaves to the light like the squash.

If Mr. Hardy will examine an acorn he will find an outside and an inside covering, and the kernel or meat. He will discover that the kernel is divided. The halves are seed leaves, and he will find a short stem connected to these seed leaves that, when growth takes place, pushes the main stem and rootlet out of the kernel, the former to grow up into light and air, the latter to grow down in darkness and moisture.

Sap does not take part in the growth until the nutriment in the seed leaves has provided leaves. Crude sap must have leaves before it can assist growth. Branches are but repetitions of the first growth. A branch is implanted in the stem, while a stem is implanted in the ground. Branches grow from buds that were formed during a former season. Nutrition was stored in the buds to start the branches into growth, just as the plantlet was started by the nutrition in the nut. The crude sap does not start growth in the spring, but awaits the leaves provided by buds. The buds start to grow in this locality when the thermometer registers 42° or 43°. I have seen leaves in February, and have known a warm spell in the fall to open many buds. All the buds on a tree do not grow. As there is a bud and sometimes several in the axis of every leaf, it would be impossible for the tree to maintain such an enormous growth. I sometimes see black cherry trees completely stripped of leaves by the tent caterpillar. In such cases the dormant buds provide new leaves. Nature seldom gets left.

We found by examining the blossom that plant life started from a single cell. That by division it grew to a plantlet. The plantlet also increases by division until the result is a simple plant or a full-grown tree, as the case may be.

Every part of the tree is made up of individual cells. The cells are filled with various substances, but we will now look to the cell walls, as they make the framework of the tree. We will inquire what sap has to do with the walls of the cells. Does sap take part in the growth of this important part of a tree?

Chemists have discovered that cell walls are composed of a material called cellulose. Cellulose is a combination of carbon, hydrogen and oxygen. Water is composed of the two gases, hydrogen and oxygen. As the roots of trees imbibe water, which passes up to the leaves, the two gases are provided ready made. How about the carbon? Carbon is indissoluble, therefore we must look for something in a fluid state that the crude sap or water can carry to the leaves, there to be decomposed and the carbon released. Carbonic acid gas just fills the want. Water can absorb it bulk for bulk. We see this in the soda fountain. It is composed of oxygen and carbon. The crude sap conveys it to the leaves. Here it is decomposed, the oxygen is released into the air, and the carbon enters into combination with water to form cellulose. Cellulose is conveyed to every growing part of the tree, and is formed into cells. It is carried by the elaborated sap to the cambium layer, where the inside cells form wood cells, while the outside cells form bark cells. The leaves, buds, fruit and flowers are composed of cells, and the cellulose was stored up beforehand in the leaf buds and fruit buds.

Now, we see that the tree has a chemical laboratory, where it creates material entering into its construction. It does this through the aid of the green grains of matter in the cells of leaves, but only in sunlight. Mr. Hardy will have to guess how this is done, the same as everybody else does. The cells contain nutriment, such as starch, sugar, proteine, etc. Starch is composed of carbon and water; it is formed in the leaves and is conveyed in a liquid form to all parts of the tree where needed. It forms the flour of wheat, corn, rye, etc. Proteine is also brought into existence in the chemical workshop. It is a combination of carbon, hydrogen, oxygen and ammonia. It is said to make seeds nutritious beyond everything in vegetable growth, and without much change; it is said to form the flesh, sinews and bones of animals, at least the animal part of bones.

I do not mention other properties created by the plant or tree in its laboratory, such as oil, jelly, etc., because I have called attention to enough to show that by a chemical process the tree is able to create any needed material, and to convey it to any part of its structure. But why or how the tree selects the proper material is a mystery too deep for the human mind. Proof, that the tree can and does make a selection, there is in abundance.

Space prevents my dwelling on this subject. I hope I have been able to set Mr. Hardy to thinking. If so he will come out all right.

No. 3.—"Also if the sap is all the same, how is it that some kinds of apples, like the Baldwin, only bear in any quantity on alternate years. If it is the same sap and the quantity is sufficient, why is not the same effect produced every year, instead of regularly on each alternate year, while in other varieties it is done nearly every year?"

Answer.—The Baldwin bears every other year in ordinary soil because the original seedling from which it sprung bore that way. The cion or bud will give the characteristics of the original tree. If Mr. Hardy should ask me why the original tree bore every other year, that would be another question. I have an opinion, and that is that it was caused by a lack of pollen.

Apple trees bloom in clusters, but bear one apple to the cluster usually. Wild apples seem to bear in clusters largely, which would indicate that there were few sterile flowers in the beginning. The increase in the size of the cultivated fruit has claimed the pollen of a whole flower cluster, and I believe it almost impossible for a Baldwin tree to grow its enormous crop and provide at the same time perfect fruit buds for another season. I have noticed a good bloom without fruit. This would indicate that fruit buds were set the season before, but that they were imperfect. It is my opinion that when the tree was providing nutriment for the buds it fell short on the pollen. I have known Baldwins to bear every year with extra cultivation.

HERMIT.

MASSACHUETTS.

Editor Forest and Stream:

Another very interesting subject, "Trees," has been receiving attention at the hands of several of your able contributors. The communications of Mr. Hardy and Mr. C. H. Ames especially have stirred within myself the scribbling spirit. I don't believe I can contribute much solid information on the subject under discussion—the movement of sap in trees—but I have reflected a good deal about the matter, and have sought information from "the authorities." My information is meager, but perhaps my reflections and deductions will be received with tolerance at least.

The most definite expression on the latter point that has come to my notice is that the force employed is partly capillary and partly chemical, neither of which do we comprehend any better than we do the force of gravity, which is no comprehension at all. This is vague enough, and simply means that, so far as I am informed, we know nothing at all about it. Mr. Ames' suggestion that the whole question is embodied in that tremendous mystery, the "life principle," is probably as near a solution as will ever be attained.

The statement that a growing squash sustained a pressure of 3,000lbs. is rather staggering. Fancy a 3,000lb. pile hammer being let down ever so gently upon any kind of a squash. There would certainly be more kinds of a squash than one in the mix-up.

As to the question of the return of the sap to the ground, I believe the fact is fully recognized that it does not so return, after its function of making new tissue has been performed; at least not in the way supposed. There is a downward as well as upward movement going on all the time during the active periods of growth.

Water is drawn up from the ground through the agency of the roots, which also possess a selective capacity for choosing out the nitrogenous and phosphate compounds, with some others which the soil contributes. These are carried up to the topmost branches, where they enter into combination with the carbonic acid taken in by the leaves from the atmosphere, while oxygen and water are thrown off by the leaves. Since the carbon thus accumulated constitutes by far the largest part of the bulk of wood fiber in the tree, it follows that the principal part, if not the entire substance, of which it is composed, must descend from the leaves, reaching even to the extremities of the roots, as being the process by which all growth is achieved.

The fact that sugar is composed almost exclusively of carbon, which is supplied solely by the atmosphere, through the agency of the leaves, points to the related fact that the sap which yields the sugar, at whatever

season obtained, has received its main ingredient from the upper extremities of the tree.

In allusion to the large proportion of tree fiber that is drawn from the atmosphere, it has been stated by some scientific authority, whom I do not now recall, that when wood is consumed by burning, all the volatile parts which escape in the process of combustion consist of those substances originally contributed by the atmosphere; the residuum of ash representing what came from the soil.

Mr. Ames, in allusion to the phenomenon of differentiation of substances as exhibited in the process of growth, asks, "Must we not in this case also look to the mysterious selective power of the organism, the attribute of life, for the explanation of what is accomplished?"

It is my belief that the above sentence covers the case. And this brings us up to the germ, the wonderful and mysterious germ, the parent of life; the most stupendous fact in nature. This microscopic bit of matter is, in its small compass, a complete epitome of the great mystery we call Life.

The ancient conception that man was formed out of clay, and the "breath of life" instilled into him by the Almighty, is weak and puerile in the presence of this invisible speck, with all the potentialities contained within itself.

The wonder of it is greatly enhanced when we consider that the development of actual life from the germ requires as an absolute essential the coalescing of two of these little specks, of like kind, but opposite gender.

Mr. Hardy thinks that the sap in a tree must possess various qualities to produce its varying results of wood, bark, fruit, etc. That suggestion can, I think, be disposed of by the following consideration: You may plant an acorn and a chestnut within a few feet of each other in exactly the same kind of soil, and with surrounding conditions exactly alike. The one will select and assimilate from the surrounding media substances that produce an oak tree, with all its peculiar characteristics, with blooms that are sexualized, requiring coalescence of opposite germs, to fructify and perpetuate the life principle; with acorns containing germs with the same capabilities of reproduction as their parent; and this with unvarying results except by the slow process of evolution.

The other, with exactly the same materials to select from, will produce a chestnut tree, with its characteristics.

The same grass that produces mutton in obedience to the nature of one germ will produce beef at the demand of another germ. The same food that produces reptiles and "vermin," if appropriated by the human germ, produces man, with all his qualities, physical and psychical, with his mental powers of retrospection, introspection, and to coin a word, futro-spection.

The potentialities which can convert similar substances into such widely varying and such stupendous results are contained in little invisible specks of matter. But this little germ, so small physically, so immeasurable potentially, possesses another wonderful feature, which sets it apart in isolated grandeur and sublimity above all other facts within the scope of human knowledge. Science has pursued its way with confidence up the long and intricate stream of evolution to its source, and has constructed a grand system of mundane life development, that commends itself with irresistible force to the intelligent mind. But, when science has reached the utmost source of the stream of life, what does it find? It finds this little microscopic germ assuming the proportions of a vast mountain of adamantine rock, which stands squarely across the way, and forbids further progress even to the thousandth part of a hair breadth.

Human science must stop at the germ, as a towering wall too high for the eye of knowledge to see over.

Philosophy, however, may soar above it and around it, and indulge in as many phantasies and air castles as the imagination of man may choose to picture.

But knowledge stops at the germ. COAHOMA.

MISSISSIPPI.

Our Pretty Visitor.

ON this morning of Dec. 4 the snow lies 1ft. deep on the ground, and the air is burdened with the falling flakes; work out of doors is a thing not to be thought of; and so I will write of the pretty little visitor which has come to give us a vision of grace and beauty all unknown to the dwellers within city walls.

A year ago last spring a tiny doe fawn of the mule deer type was caught in the mountains, and given to a young girl living some three miles from our home.

With a band of red flannel around its neck, and with a small tea bell suspended therefrom, the little creature roams at will, wild and untethered, save by her love for the society of those who have learned to love and pet her upon every occasion, and which brings her, at long intervals, to our door.

Yesterday morning as I stepped to the door the tinkle of a bell came to my ears, and looking out toward the barn, among the staring and astonished cows, I saw Kate Atkinson's deer.

What a beautiful creature she had grown to be! Fat, plump and sound; in the very perfection of her lovely blue coat, and with her slender legs colored the exact shade of buff to harmonize perfectly—the traditional "buff and blue" of the revolutionary fathers—she tripped along down to the gate, the very embodiment of graceful movement.

(By the way, isn't it strange that as election time of the year approaches, and the trees are robed in their glorious autumn dress, all the deer in the American woods proceed to don the old revolutionary colors, and to become, for the time, stanch old-line Whigs, to the last one?)

Of course, we all went out to meet her, and after each one had fondled and petted her, and explained to her, as did Artemus Ward to his sweetheart, that we thought very muchly of her, she sprang up on the roof of the outdoor cellar back of the cabin, and from there stepped up on the roof of the kitchen, along the whole length of which she meandered to the front, where she posed at length; the lovely little monarch of all she surveyed.

One of the boys then slipped up behind her and gave her a sudden scare, when she jumped from the roof, alighting in the snow 7 or 8ft. below, and trotting off out of danger, waited until the coast was again clear, when she repeated the whole interesting performance, minus the final "leap for life."

All this was very interesting, to be sure; yet, when the tinkling of that wretched bell sounded at intervals all through the following night, and the patter of tiny hoofs, promenading the kitchen roof, beat a tattoo which defied all the seductions of Morpheus, it grew monotonous.

A halt was called promptly in the morning.

Positive orders issued from the maternal head of the household that all petting of the little creature must stop forthwith! "What would Kate say, should she hear of it?" But the graceful little embodiment of beauty, how could she be resisted? All hands proceeded to disobey orders with the utmost promptitude.

The boys indeed went to the mischievous length of tying a big paper to her little black-tufted tail; and all joined in their hearty laugh to see her bounding off through the snow, glancing backward occasionally at the strange flag of truce so unwillingly borne; yet she again proceeded to act like the veritable little Christian she almost seemed to be, loving her enemies, and walking slowly back to be again petted and loved—as dear old Uncle Remus remarks: "What us gwine to do?" Be indifferent to all her little prettiness? Nay, verily! and we take her in our arms again.

How her sweet timidity and gentleness recall the lines which charmed my long-ago boyhood, and which were addressed to a pair of swallows that flew into church during divine service:

Gay, guiltless pair!
What seek ye from the fields of heaven?
Ye have no need of prayer;
Ye have no sins to be forgiven.

Why perch ye here,
Where mortals to their Maker bend?
Can your pure spirits fear
The God ye never could offend?

Well, aside from the poetry of it, we have gotten a visitor, and "don't you forget it."

Not a bit of use in trying to drive her away; she eludes the whole pursuing family with the grace of a swallow in its flight; enjoying a romp hugely, and bounding over the fences with an ease that betokens wreck to the cabbage plants of a coming summer, and the consequent ruin of our tempers.

She is camped right down in the snow in front of the house, forgiving everybody, loving everybody, and keeping everybody awake to the extent of her tinkling, sharp-hoofed ability.

And don't the "chained to business" city dwellers envy us our pleasure with the little creature? I believe they do. ORIN BELKNAP.

VALLEY, Washington.

Rabies in Skunks.

DENVER, Colo., Dec. 3.—*Editor Forest and Stream:* The case of a child's death in this city, resulting, the physicians say, from rabies, has attracted much attention. The Republican quotes one of the specialists, who was called in for consultation, as saying:

"It is as far as I know or can find out the first recorded death from hydrophobia in Colorado. One man died at the county hospital about six weeks ago who showed many of the symptoms of rabies, but as far as I saw, not all of them. Some of the most important were lacking. His case I cannot state to have been rabies, but I have no doubt in the present case, which is consequently remarkable."

It is yet claimed by many, and by some who claim to be high medical authority, that there is no such malady as "rabies," or "hydrophobia." You will observe that the learned author of the Republican article asserts that a certain recent case was the first ever known in Colorado. He doubtless echoes the assertions and opinions of sundry medical gentlemen with whom he has conferred. It is very far from the truth. Rabies in skunks has been known in this country ever since white men came into it. It has also been noted in wolves occasionally, though noticed less frequently, owing, doubtless, to the differing habit of the animals. Fremont lost one of his men from skunk bite during his first trip to the Rocky Mountains in 1842, and described the case as hydrophobia. Only a few years ago a Mexican woman died from the same cause in the Arkansas Valley, forty or fifty miles below Pueblo, this State. She was sleeping in the open air and was bitten in the face by a skunk.

FOREST AND STREAM published an exhaustive correspondence upon this subject twenty odd years ago.

WM. N. BYERS.

Raccoon Breeding in Confinement.

FOR the benefit of an inquirer, Mr. Arthur Erwin Brown, superintendent of the Philadelphia Zoo, sends us this note:

"The common raccoon (*Trocyon lotor*) does breed in captivity, but not frequently. It has bred but twice in our gardens since 1876, although we have had at least 150 individuals during that time. The dates of breeding were March 23 and July 8. In the Zoological Gardens of London the species has bred four times since 1861, the dates being April 9, June 3 and 11, and Oct. 6. As a rule, when wild animals breed at all in captivity, they are more irregular as to season than under nature.

"The largest number in a litter among the above births was three; several times there being only one. This again is a common result of captivity, there being almost always fewer at a birth than when free.

"I do not know if the crab-eating raccoon (*Procyon cancrivorus*) of South America will breed or not; few of them have been kept. The nearly related coati (*Nasua*) of Central and South America very occasionally breed in collections; and the bears, not far distant in relationship, very seldom breed. I know of very few cases."

"ARTHUR ERWIN BROWN."

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

There is no more lastingly appreciated holiday gift than a good book. For one who is interested in outdoor sports the volume may well be one of those included in the "Forest and Stream's" list. And do not forget to order in good season.

In Tennessee Quail Fields.

JAMESON, Tenn., Nov. 27.—*Editor Forest and Stream.* A few days ago my hired man told me he had seen two fine coveys of partridges in my upper field; so the morning after he made this announcement I took my dog and gun and went with him when he started to his work. We tramped across a plowed field to the weeds where the birds were said to be. At the proper time I sent the dog on. He hunted the field in fine style, but no birds were found until we reached the fence on the opposite side. The dog did not find them then, but I walked right into the covey and flushed it. They dipped over the fence so suddenly I had only time to bang one barrel, and with this brought down one bird. Beyond the fence was a skirt of woods. We climbed the fence and followed into this woods. The dog was with us now, and soon came to a point. Five or six birds got up; but the bushes were thick here, and only one came to the open, and that one some distance away. This time I picked a few feathers, and the bird went on. We expected every moment now to see the dog point other birds, but instead he commenced to trail. We thought the birds were running, and so they were, but not the ones we had found. The trail led in a half-circle back to the field, just inside which the dog came to a stand. I climbed the fence and flushed the birds. The weeds seemed to be full of them, and as they dashed into the thicket I stopped two more. We followed on again, and the dog soon commenced to point, pointing four single birds, one after the other, in rapid succession, all of which I killed. I now had seven fine plump fellows in my pockets. Scattering birds were everywhere, but I told my man I didn't care to murder them all at once, so turned from a tempting bit of shooting and went back to the house.

Two days later I tried this same field again, just before noon, but found no birds. I decided they were roosting in my weeds and feeding somewhere else; so that afternoon, just before sundown, I rode into the field again. The dog ran on ahead and disappeared over a rise. When I reached the top of the rise I saw him standing on a beautiful point 50 or 60yds. away. One front foot was raised as though he had stiffened just as he went to make his leap. A few yards beyond the dog was a dense thicket of maple bushes. The frost had turned the leaves a bright golden color. They formed a solid wall of yellow. The dog stood out boldly on this yellow canvas, forming a picture that was at once to me a source of pure delight. The rays of the setting sun falling over all added to the beauty of the scene. I stood a few moments to admire, then stepped forward and flushed the birds. About half of them went straight for the thicket and the others turned across the field. I dropped one in the edge of the bushes, then turned and stopped another in the weeds. I saw still another light, took the dog over, pointed promptly, flushed the bird and killed it twenty steps away.

This fine November weather we have had a number of pleasant experiences of this kind, and I must tell you of one other. My friend Cliff down by the store keeps a couple of good dogs, and hunts. He told me he had heard of lots of birds about two miles down the country, so we decided to spend our afternoon among them. I was at the meeting place promptly at 12:30 o'clock. Cliff came in a half-hour later on a full gallop, with dogs and gun. He was somewhat heated and rattled. Said he had to start a plow before he could get off. We set off at once for the farm on which we meant to hunt. Cliff went by the house to ask permission to hunt in the fields, which was readily given, and we rode into a stubble field of sixty acres.

Cliff planned that I should go along by the fence, while he rode out parallel with the fence, but about 100yds. from it. In this way we were to make throughs back and forth across the field until the birds were found. I had gone but a little way when my dog pointed in toward the fence. I called to Cliff. His dogs seemed to understand I had found, as they came running down, and backed promptly. About the time Cliff came up the dogs began to waver on point, ran up the fence a little way, and pointed again. We knew the birds were running; so I climbed over into the next field. That had been plowed up and sowed to wheat, and there was nothing to hide the birds. They had come out on to this open ground and were huddled close together, though slightly on the move. Had I been disposed to make a pot shot I might have killed half or two-thirds of them, but we did not propose to hunt in that way. I took a few steps toward them, when they dashed across the fence. I got two of them as they went over, and Cliff another on the other side. We followed them up. The dogs soon came to point. Three birds got up. I killed the first, Cliff the second, and the third went on.

We thought now we could just kill anything that might fly up, so decided to kill straight through. Next four birds got up. I missed and Clifford followed suit. So much for being over-confident. Next four or five birds got up. The first came over my head, too close to shoot. I thought to turn and kill him as he went off, but the weeds were in my face, so the bird went on without being shot at. Cliff banged at another, going in the other direction, watched it fly 200yds., double up and fall in a cornfield. We went over and found that one, then went back to look for the one that flew over my head. It went back to the corner of the field where we had started. We did not find it at once, so

got over in the road to look. We noticed one dog did not come over with us; went back to look, and found him on a stanch point. Cliff kicked up the bird, and killed it just ahead. After that we found a few scattering birds, and killed straight. At home we counted out an even dozen nice ones. We did not find as many as we expected, but the sport had been good and we were satisfied. BACKWOODS.

Mr. Owens' Experience.

REMSEN, N. Y., Nov. 28.—*Dear Mr. Editel Forest and Stream:* I been readin on your columns bout some five year or less, an I wass like special those paper on Fred Mather bout what he call "Men I have make fish with" and some nuther down in "Low down Louisiana." I think Mr. Mather wass make fish with good many fellow and hunt too. Some of him prettee good fellow whatever. I hope he was keep able for ink dippin and writin Jus so long he can take pen in hand.

I been live in town Remsen, quite some mile by Utica, N. Y. Remsen wass some kind of Yankee town now, but bout 50 year ago wass all settle by some of our father and mother what you call Welshman, but that bin long while now, an everybody wass talk English talk Jus so good like somebody I tell you.

I bin thinkin long time now some day I wass write letter by you an tell bout some kind of hunt I wass have las year with Evan Evans by what here fellow was call "Jersey man preserves." They wass some three, four man from Jersey rent all round by Boardwell Pond, print up some little board and call him "preserve." I don't know what he call him that for, but wass firs rate place for shoot a woodcocks, I tell you. There wass'nt no fellow hunt there but Jerseyman, an when I goin there for hunt, some Yankee fellow name Bill Smith he tell me if I "go there for preserve I get in a pickle." I say "What you all while talkin bout 'pickle' and 'preserve.' I wass'nt go for steal grocery store. I wass hunt a woodcocks." He say somethin bout Welsh, what make me pretty mads, so I walk way. It iss pretty good thing for do when you mads—walk way—you wass'nt get hurt so bad like you bin fightin. I always do that since I readin some poem bout him in "Bard Avon" what you wass call Shakespeare bout fellow what "Live for fight some Nuther day."

Now Evan Evans he wass'nt shoot a wood cocks afore, an so wass I jus same Jackly. We allus been workin cut a corns, plowin, pick apple and fertile makin, bout a wood cocks season; but this time we make a time for takes off day an go shoot him. Evan Evans he say we wass better for make practice on roll pumpkin down hill, but I say wass no use for spen money on smash pumpkin—better save him for a wood cocks. We able for shoot him all right cause she pretty big bird—look you. Mos so big like patridges, and we wass both able for hit patridge when he sit in a limb on tree; an some fellow wass tell me a woodcocks easier for hit on fly than patridge on a sittin, cos he wass got so long bill he get herself cross up in a bushes.

Well me an Evan we startin out an get in alders, and walk long, an did'nt see somethin till all of sudden Jump up some kind of queer bird an give sort of spit whistle an fly quick two or three way like a screw corks. All same he get couple drink out by my cider hard barrel.

I say "What than Evan?" He say "I wass'nt never see him fore. Guess he wass what they call it in book 'sy-poke.'"

We go long an keep scare him up all time, but wass'nt see nuthin so big what we think a wood cocks. Sy-poke keep fly up, an pretty quick we say we shoot some of him, but when we come try we find hard for get aim, an if you shootin fore get aim you sure for waste powder, which wass all same throw money by dogs, an that aint never do tall. You aint ever get rich if you do him. Then we come to crick, an I look up him an see a woodcocks stan on log fishin. I know him a woodcocks for have long leg and bill an short feather tail.

I take pretty long aim then shoot Jus so quick I can, an I hit him good I tell you. He wass fine bird with yellow green leg. I jus show him by Evan when I hear fellow come up an he say real mad "What in name of sight dam you do shoot on a preserves?"

I say "Nuthin only shoot a woodcocks. I wass'nt touch any preserves. Wass'nt see any for touch."

He say "You got a woodcocks?"

I say "One" an then I show him. I think he bin mads then, but he laf an laf, an say he wassnt never seen any fellow like Welsh, til he pretty near roll on a grounds. Then I get a little mads an I say, "What for you make fool by yourself an callin me Welsh?"

Then he sayin "Any body sides Welsh wass know sy-poke from a woodcocks."

An I say in "So wass I. I see lot of sy-pokes fly up an twist off like screw-cork an spit whistle, but I wass'nt able for get aim on him."

Then he laffin some more an say that little birds was a wood cocks, and we better go back by house out of preserves else he cost us money an he wass'nt want for do that cos we pretty good fellow both two of it. Well we think so jus same Jackey, and we gettin out in open an Just we get over fence up go nuther screw-corker bird. I got to shoot off gun any way else woman don't let me bring him in house so I try him. I take long aim—shut my both eye an let fly it. Evan give big shout "You get him." An he run pick him.

Well now he wass pretty—all brown different shade an color an eye on so high top head he look Jus so her bill put on behind side first. Well we go home an woman make little pie by him an he was firs rate I tell you an some time I was sure for take some nuther off day, and see if I pay preserves fellow a quartel dollar for get on right side of it an shoot nuther woodcocks. Man mus have little fun even if she do cost money.

If you likin this letter I write bout him when I go next for hunt an if you never come by Remsen we have glass buttermilk an firs rate time talk about cow an butter an make fish an hunt.

P. S. I bin read in book bout sy-poke an I see him call there "green heron" an I wass think him a woodcocks so I guess I wass like heron—all a same green.

Yours for make sport,

OWEN EVAN OWENS.

(Transmitted by J. R. B.)

A Piedmont Game Preserve.

SEVERAL Fayetteville gentlemen, including Major Chas. Haigh, W. N. Williams and G. A. Burns, have taken up some 30,000 to 40,000 acres of land in the vicinity of Spout Springs, in this (Cumberland) county, with a view to make it a great game preserve. The territory is watered by upper Little River and several other good-sized, clear water streams, and is the natural home of the red deer, which are almost as numerous now as they were 100 years ago. Three carcasses were brought into town three days ago, one doe weighing 160lbs., which is very heavy venison for this section. Turkeys are here too, and game of other kinds, especially quail is abundant. The syndicate includes several Northern gentlemen, and it is proposed to make here as fine a game preserve as there is in the South.

Shooting in the purlieus of Fayetteville is nothing to brag of. Local and visiting sportsmen occasionally bring in a brace or two of partridges, but the principal part of each bag is made up of larks, doves and robins, which are not game, to my notion.

Some ruddy ducks, coots, and sawbills are picked up on the Water Works Pond, a mile from town. This body of water is clear as crystal, and contains some black bass, ring perch and pickerel (called jack here) of large size. One of the latter was brought in last Saturday which measured 22in. As a rule, this species of fish is not of the best quality in Southern streams, which are for the most part muddy; but this county of Cumberland is remarkable for its clear water ponds and streams, which are not surpassed in purity and sparkle by any in Minnesota or New England. The Lakewood Club owns a lake a mile long and a fine house seven miles out from town, and Mr. Herbert Lutterloh, a capitalist, has a fine private black bass pond, which contains some fine fish, to which additions will be made this winter for stocking purposes. Several mill owners have ponds which afford unusually fine fishing, and the center of the city itself is crossed by Blounts Creek and Cross Creek, both of which afford exceptionally fine angling. Fox hunting with horses and hounds is a favorite pastime on moonlight nights.

I find very little game in the immediate vicinity of Fayetteville, but deer, quail and turkeys are reported in abundance everywhere else outside of a radius of twenty miles. That is hard on my dog, which is kept on chain by durance! Your Aleck Hunter, who is now at Pittsboro, near by, writes me that the shooting is "splendid." Here in town the local gunners do not hesitate to bag coots, mud hens, fish ducks, robins, larks, doves, field sparrows and yellow hammers. Even the mockingbirds do not escape. A 2-cent cartridge will blow the life and song out of a $25 mockingbird in a jiffy. Up to date there were several on our premises, but I reckon they have all been shot off by this time. Local sportsmen have marked me low down as a sportsman because I will not bag such small game, and bring home more pitcher plants and venus fly traps than larks, but the fact is I have seen only seven quail in four outings, shooting in company over a good dog, of which two were bagged.

One yellow hammer, which fell to an all too certain aim, had been shot before in the leg, and the enlargement around the fracture had so completed its curative purpose that it sloughed off in a lump and hung only by a thread, leaving the tibia apparently as sound and shapely as ever. I have known of injured trees casting their burls, but this is the first case I have noticed among fauna. It is interesting.

A crack rifle shot has developed here, the son of ex-Governor Fowle, of this State, who was a corporal in the recently disbanded Second North Carolina Volunteer Regiment. He shoots hickory nuts off the trees, and bores coins with a .22 bullet, with as much facility as Dr. Carver ever did. C. HALLOCK.

The Jackson's Hole Situation.

JACKSON, Wyo., Dec. 3.—*Editor Forest and Stream:* Some three weeks since the residents of lower Jackson Valley, interested in game protection, contributed to a private fund and placed an additional game warden at Teton Pass, to assist Game Warden Lannigan. The first arrest was of George Moulten, of Idaho, who had in his possession, as I write now, eight head of elk, four cows and four bulls, killed in absolute violation of law. Justice La Plant fined him $30 and $5 costs, and Game Warden Lannigan took charge of his game. Two days after this, L. Davidson, a resident of Idaho, was arrested, having in his possession eight head of elk, four cows and four bulls; and he admitted that he had killed and transported two bulls some two weeks earlier. On the 30th ult. B. F. Parker and Casper Allen were arrested, both non-residents, having in their possession five head of cow elk. The following day John Davidson and Ben. F. Davidson were arrested, having in possession four head of elk; also Thos. Wilson, a justice of the peace, of Teton Precinct, was restrained from proceeding out of the State until his case was investigated; and on the same day T. W. Cox, a resident of Idaho, was arrested, having in his possession four head of elk. During this time over 100 head of elk had been transported to the Teton Basin side of Wyoming by alleged and real residents, who lived there, all of this game having been killed in the Teton timber reserve, at and near Jackson's Lake, Wyo., with a full knowledge of all the residents therein that the greater part was killed unlawfully.

To show how wantonly and indiscriminately the game was slaughtered it suffices to say that on Saturday and Sunday, the 26th and 27th ultimo, Bradley M. Eley, the mail carrier to Elk, Wyo., informed me that 2,000 shots were counted during these days, and this statement was corroborated by others with whom I talked.

The arrests heretofore made of some of these individuals was by the privately-paid deputies at the Teton Pass, forty miles from where the game was killed; and the subsequent prosecutions were to all intents and purposes farces, so far as any penalty was concerned, and evidences that notwithstanding the fact that the great majority of the people favor strict prosecution, such did not occur.

As the retained attorney of the Jackson Hole Gun Club, I appeared in all cases, and filed and swore to all complaints, except those made by the wardens employed. That the case of L. Davidson was settled by him paying $1 and nominal costs, the same as the case of Cox. Ben. F. Davidson was fined $5 and costs, and all the rest were turned loose. True, in some cases the meat was confiscated, and in Parker's and Allen's cases it was not wholly confiscated, they being allowed to take out two and a half head. It can readily be seen that these cases worked no good to the game. We are gratified, however, that the instituting of these proceedings probably saved from slaughter 500 to 1,000 head of elk, as it was intended by Idaho people to come to Wyoming and take out a license, and hunt, kill and pursue to their heart's content. Davidson, Parker and Cox each had a license issued by Jackson Valley courts, and it is held by the court that there is no penalty attached to the section of the statute forbidding transportation of killed game out of the State, when such game was killed under and by virtue of a $20 license. In my opinion more game has been illegally killed in the Jackson Valley country, principally within the Teton timber reserve, this year, than in any three consecutice years in the past. If the next Legislature refuses to pass laws and appoint a proper commission to protect the game, and to take the game question entirely out of the jurisdiction of county authorities, and out of politics, then the greatest game country in the United States, and that country that receives the surplus of the National Park game, will be absolutely depleted. It is a self-evident fact that game protection in the Jackson Park country is of no material benefit, judged from proceedings of the last two weeks. The privately-paid game wardens admit their inability to do anything with the violators in view of the light fines and costs imposed. Offenders plead guilty and throw themselves upon the mercy of the court. That the greater portion of the people are dissatisfied goes without saying.

W. L. SIMPSON.

Erie County Association.

A SPECIAL directors' meeting of the Erie County Fish and Game Association was held in Buffalo, Dec. 3, to devise some plan for the enforcement of the fish and game laws that would be more effective than the simple seizing of nets and reporting of the offenders. The meeting was held in the office of Percy S. Lansdowne, secretary of the Association, and those present were President L. P. Beyer, Vice-President George B. Webster, Treasurer Goodrich J. Bowne, Secretary Lansdowne, George Goetz, Jr., Thomas Cary Welch, attorney; Special Protector Eben P. Dorr, of the New York State Fish, Game and Forest League, and Protector Carter.

From the remarks made by Attorney Welch, it was evident that he is personally an enthusiastic believer in the enforcement of the fish and game laws and that he will co-operate with the Erie County Association to secure such an end. The directors, at the conclusion of the meeting, made him a member, and then elected him a director.

He had been called to the meeting to give his views on the subject of prosecuting restaurateur, hotel-keepers and others in this city, who have been selling or who have had in their possession venison since Nov. 20. Mr. Welch reported that he has good cases against a number of local dealers, who have not yet been arrested. He said that what the fish and game protectors need most to secure a reasonable obedience to the law is the backing of the community. "They need the supporting sentiment of the people generally, so that, when these officers take cases of violations of law into the courts, the justices will know that convictions will be for the general good; that the enforcement of the game laws is not for the benefit of the rich sportsman alone, but for the benefit of the poor sportsman as well; and that the general public desires the prosecution of violators in the interest of the preservation of the fish and game in this vicinity."

"Yes," said President Beyer, "there seems to be a general impression that we who cry 'Enforce the law!' are talking for the benefit of a favored few. That is a grievous error. The protection of fish and game in this vicinity is more particularly for the benefit of the poor sportsman, because he has not the means to have a fish and game preserve of his own, as the rich man has, nor to travel to the Adirondacks or more distant points in search of game, as the rich man does. If the general public only could see the matter in this light, I'm sure this Association and other like associations and the fish and game protectors, instead of being looked upon as meddlers, would have the hearty support of the community, and the courts would not think the enforcement of the law was a persecution of the poor. More convictions would create more respect for the law and more respect for the law would yield more fish and game for Buffalonians. There would be better fishing and duck hunting on Niagara River, which is the favorite resort for Buffalo sportsmen of moderate means."

Vice-President Webster, Secretary Lansdowne and Protector Carter spoke along the same lines. Carter said emphatically he hoped that he and other protectors could gain the public's support. "I've done everything in my power to stop net fishing on the river," he said. "I have seized hundreds of seines and fyke nets and squat nets and every other kind of nets. I have stoned nearly every hauling grounds from the head of Squaw Island to the foot of Grand Island. And, by the way, I think the scheme of piling boatloads of stones into the river where seines are usually hauled prevents more seine hauling than any number of protectors could, because the illegal fishermen don't care to risk their nets being torn. And yet, in spite of all the work I and my assistants have done, the use of nets continues. I have been told, and I believe, that if more violators of the law were prosecuted and punished, there would be fewer violations of the law. I want to say that out of about 300 cases that I have taken into court from time to time, I have never secured but one conviction, and yet in every case I caught the violators right in the act. The one man who was convicted was Kleiber, of Tonawanda, who was fined $5 by Justice Graf last summer."

President Beyer referred to a fact of interest to the men who fish in Niagara River, which heretofore has not been published. Last spring the Erie County Fish and Game Association, which, with its membership of 500, has a fast-growing influence, applied to the State commissioners for some muscallonge and pike spawn. The

State officials soon shipped to President Beyer 180,000 muscallonge spawn and 500,000 wall-eyed pike spawn. The wall-eyed pike is a cross between the yellow and blue pike, and though less gamy than the muscallonge, is a splendid fish to catch or eat. The spawn came in cans like milk cans, and Mr. Beyer personally, with Protector Carter, took the cans out into the river in Mr Beyer's yacht and deposited the muscallonge spawn on the spawning beds at the foot of Strawberry Island, and the pike spawn on the beds at the head of Grand Island. It is believed the two little muscallonge caught in the net seized by Carter on Friday night were of the spawn placed last spring.

"It is a downright shame and outrage to have these little creatures caught now," said Mr. Beyer. "They are not big enough to be of any good to any one, while if they were left in the river for a few years longer fishermen would have fine sport catching fish weighing anywhere from 10 to 30lbs."

As the result of the discussion the following resolution, offered by Mr. Webster, was unanimously adopted:

Resolved, That this Association gives its moral support to the Erie county fish and game protectors in their efforts to uphold the fish and game laws, and give them all the aid in its power to obtain evidence in the proper cases and to secure convictions of all violators of such laws; and that we condemn the sale of prohibited game by any persons, restaurant or hotel, whatsoever, out of season, and that we hereby offer to any person trying to secure a conviction for such a sale our hearty and earnest support.

Messrs. Webster, Welch and Lansdowne were appointed a special committee to examine the game laws to see if any amendments to provisions in the fish and game laws applying to this county are advisable, and if so, to take steps to secure such amendments.

New Hampshire Game and Fish.

HUDSON CENTER, N. H., Dec. 9.—*Editor Forest and Stream:* Our commission has recently completed the taking of spawn for the season. At Sunapee Lake we had a good catch of aureolus, or Sunapee saibling, from which we took 120,000 eggs. We have not had as good success with landlocked salmon as usual, only taking at all our stations 150,000 eggs. Of lake trout we have in the several hatcheries some 2,000,000 of eggs. We have also 1,500,000 brook trout eggs; 50,000 Loch Leven spawn, and in addition to these we have purchased 1,000,000 brook trout eggs of parties in Massachusetts.

Our bird season is practically over. The woodcock season has been just an average one. Partridge (ruffed grouse) have been quite plenty in the central part of the State. Manchester parties have had splendid success. We hear of one party, two guns, killing fifteen grouse in one day. Another party, two guns, got seventeen grouse in one day. Mr. Battles, of Concord, has had splendid success, and tells me the grouse are plenty in his section. But at the present time New Hampshire is covered with from 1 to 2ft. of snow, and as our open season does not close until Jan. 1, the pot-hunter will do all in his power to annihilate the noblest game bird on earth. They take any team that will stand fire, drive around between sunset and dark, when the grouse are budding, and kill every one possible that comes in their range. There will be a strong effort made at the coming session of the Legislature to shorten up the open season for a part, if not the whole, of December on ruffed grouse. At our last session of the Legislature the law was repealed that forbid the use of ferrets. This was done to protect our Northern hare, for it is an established fact that whenever the small, gray rabbit gets a footing the Northern hare disappears. In the town of Sunapee, where only a few years ago the cony could not be found, seventeen were killed in one day this winter, by the use of ferrets. Deer hunters are having good luck. Our open season closes Dec. 15. N. WENTWORTH.

[From the report of the Fish and Game Commissioners for the year ending Dec. 1, 1898.]

THE two years last past have been years of prosperity so far as relates to the propagation and distribution of the various kinds of food fish, and the increase of game in the State, especially of deer and other large game. No pains have been spared by the commission to detect and punish parties violating the fish and game laws of the State, and when we consider the very limited amount set aside by the State as an annual detective fund (only $250), we are well satisfied with the number of successful prosecutions that have been obtained. We have been particularly successful in preventing the crust hunting of deer in the north part of the State, and the frequent presence of that beautiful game animal in the southerly portions of the State is the best evidence of our success in that direction. We have been exceedingly annoyed and troubled by reason of the complaints from all sections of the State that dogs are seen chasing deer, and we have no doubt that many deer are destroyed yearly by worthless dogs that are allowed by their owners to run at large in all seasons. In fact, we have evidence of many cases of that character. If possible, stringent measures should be adopted to abate this nuisance. Since the passage of the law prohibiting the hunting of deer with dogs, the deer dog of the north part of the State has disappeared entirely, but some fox hounds are still kept by those who indulge in the hunting of foxes with dogs, and unless the strictest care is observed on the part of the owners fox hounds will soon acquire the habit of chasing deer, unaccompanied by their owners, and commit great havoc, especially with the does and their young in the spring and summer. Any man who is sufficiently heedless to allow his dog to roam at will at all times and seasons ought not to complain if his dog is shot by any one who detects him chasing deer, and we believe that a law permitting any person to shoot a dog under such conditions would be wholesome and add materially to the increase of deer in our State. We cannot, however, complain very much with the results of our efforts in the direction of the protection of deer, inasmuch as it is the testimony of all sportsmen who have given the subject any considerable attention that there are ten deer in the State to-day where there was only five years ago.

At the last session of the Legislature a law was passed prohibiting the killing of moose or caribou in this State until Sept. 15, 1901, and but one moose has been killed in the State since the passage of that law, so far as we have been able to learn; and the man who killed that one paid $100 and costs for his sport. The moose is a very wary, shy animal, and we shall never have them in our forests in such quantities as formerly until the lumberman is through with his operations. There were, so far as we have been able to ascertain, thirteen moose wintered in the forests of northern Coös last winter. Since the spring opened they have been seen quite frequently in various localities around the Connecticut lakes, and in the valleys of the Diamond streams, accompanied by their young, which is good evidence that in time we may have in our largest forests sufficient of that noble game to attract the sportsman from abroad. A goodly sum of money was left in the north part of our State last year by sportsmen from our sister States, who came here to hunt deer. And there is a promise that the amount so spent this year will far exceed last year's outlay.

Regarding feathered game, there is but little to be said. Last year was a very disastrous one to the ruffed grouse. The spring was so wet and cold that the chicks were nearly all killed, particularly in the central and north part of the State. This season has been a favorable one for that bird, and they are reported as quite plenty pretty much all over the State. No pains have been spared during the last two years to hunt down and punish every poacher, pot-hunter, and snarer and trapper of that fine game bird, and successful prosecutions of those cases have been numerous, especially in the south part of the State. There is no method by which the commission can increase the supply of our native game birds except by the exercise of constant vigilance in the detection and punishment of the lawless so-called sportsman; and no effort of the commission is being spared in that direction.

The commission find it much easier from year to year to enforce the fish and game laws of the State, and the reasons are (to us at least) obvious. First, the people at large, as they see the fish increasing from year to year in our lakes, ponds and streams, and the game in our forests, are becoming interested in their preservation, and render us great aid in our labors to enforce the law. But our greatest aids are the numerous fish and game leagues which have been organized in every section of the State, and whose membership is composed of the most enthusiastic and successful sportsmen, every one of whom is a self-constituted and in many instances a most successful detective. We most heartily wish them godspeed in the worthy cause in which they have embarked.

Our success in the propagation and distribution of fish in the last two years has been very gratifying, and our efforts in that line are being fully appreciated by the many who love to spend a day now and then with the rod on our lakes and ponds, or in our streams. We receive every year substantial aid from the various railroads in the State, who transport all our fry and the men putting out the same free of charge, and cheerfully render us all the assistance in their power in the prosecution of our work. Their liberality saves the State hundreds of dollars each year.

Our code of fish and game laws, as it now stands, is very good. Some changes and additions are necessary, however. For instance, the limit on brook trout, now 5in., ought to be raised to 6 in streams, and 7 or 8 in lakes and ponds; and the minimum length of black bass ought to be 8in. The law should be so amended as to fix a penalty for fishing in close season, whether the person or persons so fishing are found with fish in their possession or not. Fifteen days should be cut off from the latter part of the open season for shooting ruffed grouse or partridges, as they commence budding by the middle of December; and shooting them out of the trees while budding is simply murder. The catching of white trout or aureolus and landlocked salmon should be prohibited during the same months as the taking of brook trout, except that landlocked salmon may be taken as soon as the ice leaves the waters inhabited by them. There should be an additional penalty for fishing waters used by the State for purposes of fishculture, and closed and posted by the commission, by inflicting the same penalty for each fish so taken as is exacted for fish caught from public waters in the close season. Sooner or later the public will demand the closing of all ponds and all waters except the large lakes of the State against fishing through the ice, and we call the attention of the Legislature to that subject.

Early in the present administration of State affairs we were informed that the entire expense of this commission, including compensation of commissioners, would not be allowed to exceed $7,000 yearly; and although we have felt that this policy retarded the progress of our labors and crippled us in our efforts to some extent, yet we most cheerfully set to work on the basis of 7,000 and no more, and have succeeded in keeping below that sum.

N. WENTWORTH,
W. H. SHURTLEFF,
F. L. HUGHES,
Fish and Game Commissioners.

"Song of the Grouse."

I DO not know of anything that I have ever seen to take me back fifty years in a lifetime as the "Song of the Grouse," by J. R. B., in your issue of Dec. 3. He is not only a sportsman, but is also a poet. How well he describes the tricks of the elusive bird, putting a tree between, and getting up after you have passed him, making your nerves tingle and quick to respond, but almost paralyzing you. All who go for the king of the woods will appreciate J. R. B.'s lines. E. S. Y.

CHICAGO AND THE WEST.

Saginaw.

Something over a year ago a friend of Mr. W. B. Mershon, Saginaw, Mich., gave him a pair of Mongolian pheasants that he had brought from the West, and Mr. Mershon having no suitable place for them, gave them to a farmer friend, who also had a pair of these birds. One of the cocks got caught in the wire netting and was killed, and a little later the other cock escaped into the woods, so it was thought best to turn out the two hens also. The three birds were often seen in the thickets near Saginaw. This week a local paper briefly chronicles the fact that a certain shooter had been out just south of the city and succeeded in bagging a magnificent cock pheasant. The shooter is quoted as saying that he was going back the next day, and would try to shoot the hen, which he had seen with the cock. The paper printed this with no comment, and apparently as the record of a natural and commendable act on the part of the hunter. Mr. Mershon's indignation over the matter may well be imagined. Lower Michigan should prove admirable country for the Mongolian pheasant, and it is too bad this experiment should come to so untimely an end.

Warden Carpenter, of Saginaw, made a little visit to Bay county last week, and found a lot of illegal nets in the bay, within easy sight of the house of one of the two local wardens. He seized five trap nets with half-mile leads, and deserves thanks from a good many game fish who otherwise might have paid an unwilling visit to Chicago or New York this winter.

Minnesota.

There is a little calamity which may strike the State of Minnesota this winter, though let us hope that it will not. The wide-awake executive agent, Sam Fullerton, threatens to leave the office of State game warden at the end of his term, and not to offer his name again for re-election. In view of the intelligent and fearless work that Mr. Fullerton has done, I should consider this a calamity to the State which is easily first in the matter of game laws in this section, and second to none in their enforcement. Mr. Fullerton has seen a good deal of history made during his incumbency, and the Minnesota history has always been one of progress. As to the number of difficulties he has overcome, and even personal conflicts in which he has taken part, most of that remains unwritten history. His fearlessness and activity are too well known to need comment. In common with a great many of Mr. Fullerton's friends, I should feel a great satisfaction at learning that he would consent to serve for another term.

There was a little scrape with the Indians of the Leech Lake reservation, up near Park Rapids, last week. Deputy Stephens, with six men, undertook to arrest fourteen Indians, who had been killing and selling deer off their reservation. The Indians were too strong for the officers, and broke away, returning to their reservation, whence they have issued a general defiance. It seems that these Indians have been instigated to their illegal acts by traders who tried to get them to break the law. It is not likely that the offending Indians will be followed to their reservation, though there was some talk of it at first.

The Minnesota game law will, in all probability, have presented to it this winter a strongly backed amendment carrying a non-resident license clause. Sportsmen all over the State are awaking to the fact that the Minnesota deer are endangered by the flood of non-resident hunters. It is stated that the Omaha road alone carried to the one point of Duluth over 200 non-resident deer hunters. I do not get any figures as to the actual number of hunters in Minnesota, or the actual number of deer killed there this fall, as these details are much more easily obtainable under a license system than under a wide open law. It is said that a great many hunters pass by Wisconsin, which is a license State, and go to Minnesota, which is wide open. This I believe to be more theory than actual fact, for the enforcement of the non-resident laws of the Wisconsin law is purely farcical. Yet with Wisconsin licensing deer on one side of them and with North Dakota on the other side requiring a non-resident license on chickens and ducks, it would surely seem that the Minnesota sportsmen are at least by no means retaliatory in their disposition. Should they put a non-resident license clause upon their statutes there could be no charge against them of unfairness, for it would be hardly more than a rational self-defense. Minnesota is a wonderful State for game and fish, but there never was a territory so full of game that it would not be shot out unless the hunting were made subject to intelligent restrictions.

Indians are reported to be killing game in considerable numbers this week near Partridge, Minn., where the deep snow makes deer hunting very deadly.

Some Bags.

This week the big Skokie Marsh, between Winnetka and Glencoe, just north of Chicago, took fire and burned quite across. Although this big swamp is close to the city, there has always been a good deal of game hanging around it. The fire drove large numbers of rabbits out of the grass, and a great many shooters went out and killed big bags of these cottontails.

At Perry, Okla., W. E. Hosea, a member of the dry goods firm of Tootle, Hosea & Co., St. Joseph, Mo., with his friend, Capt. A. E. Lard, of the same city, were arrested for shipping quail out of the Territory. They had killed forty dozen quail, a part of which they were trying to ship to St. Joseph.

The Texas Game Protective Association is trying to do something to stop the slaughter of wild geese and ducks along the Texas coast. Writing to the secretary of that body, Mr. R. C. Taliaferro recounts the great diminution of Texas game. He was in Wichita county, Texas, in 1892, and says that he met there a man who had an order from a Chicago commission house for 20,000 dozen prairie chickens. During that year there were 250,000 Texas prairie chickens sold in St. Louis, Chicago and New York. I think one of the best things which could be brought to the support of the FOREST AND STREAM Platform, "Stop the sale of game," would be the publication of some of the figures of the market consumption of game animals and birds. These figures are practically unknown

outside of the trade, but in reality their aggregate is enormous. The wonder is that we have any game left at all.

Here is another side-hunt, this time at Whitley, Ind., by members of the Maccabee's Society. Thirty members took part, and as usual the winning side ate supper at the expense of the other.

The Petaluma Sportsmen's Club, of California, lately held a three-days' hunt, killing 821 bluejays and 51 hawks. These birds are destroyed on the supposition that the supply of quail will thus be increased. A trifle horrible, when you come to think of it, this adjusting the balance of nature. The club offers a series of prizes for jays and hawks.

Possibilities.

I hear of still another white deer killed this season, this one by a fisherman named Anderson on one of the Les Cheneaux islands of Michigan. Still another Michigan hunter is reported to have killed a white wildcat this fall. I have heard of five albino deer which were killed this season in Wisconsin and Michigan. In view of the reckless shooting of certain hunters, a few instances of which have been chronicled, it would seem quite possible that this great increase of albinism is due to fright, and I should not be surprised if we would hear of more and more of it from year to year.

A dispatch from Wenona, Ill., states that two wild deer have been killed in Illinois during the past week. One was killed by W. Broadus, near Varna, and the other by a man from Henry, on the Illinois River. As the wild deer is supposed to have been extinct in Illinois for many years, this news may be called important if true. If it were true I should suppose it likely that the deer originally came from some such park as that of the Caton estate at Ottawa.

Personal.

Mr. W. B. Leffingwell and Mr. George Thorne, of Montgomery Ward & Co., of this city, have returned from their Texas hunt in the best of health and spirits. They were the guests of Mr. F. P. Holland, of the Texas Farm and Ranch, of Dallas. Others of the party were Col. Hall, Texas agent of the Singer Sewing Machine Co.; Mr. C. W. Marsh, of the Farm Implement News, of De Kalb, Ill., and Col. I. L. Elwood, the barbed wire magnate of De Kalb. Mr. Holland took his party to the Gulf coast, going in via Rockport. There they took a couple of cabin yachts and sailed east to Matagorda Island, opposite Port La Vaca. They lived on the boats, and did most of their shooting inland on the island, where they had magnificent sport, chiefly at fresh-water ponds formed by recent storms. They did not get much redhead or canvasback shooting, but had all the fun imaginable at geese, marsh ducks, etc. Mr. Thorne told me that he could go out any morning and kill thirty or forty quail without a dog, putting up one bevy after another, and not following the singles. The party killed, during their week of shooting, 410 ducks, 141 geese, 20 curlew, 109 quail, 2 white cranes, 2 deer and 1 wildcat, certainly a very fine bag. Col. Hall and Mr. Leffingwell each killed a deer, and Col. Hall killed the wildcat. The Chicago men say that they never had so delightful a trip and never saw a better game country. They report that the wild celery in the Hines Bay country is about all killed out. They tell me that the club house of the Tarpon Club, at Aransas Pass, is now completed. Appearances go to indicate that Rockport is going to become fashionable, and I think we can see its finish as a game country before long.

Mr. A. R. Jewett, of Chicago, and his friends, Messrs. M. S. Robinson and Charles Hathaway, of Cleveland, are the last parties to come in and inquire about Rockport, Texas, and I have sent them down to Johnnie Bludworth. They ought to have a good time.

Mr. W. H. Bartlett, of Chicago, leaves this week for his ranch, near Glendale, Arizona, from which he intends to take a trip after mountain sheep this winter.

It is sad to record the death of Mr. George Greene, agent of the Pennsylvania road at English Lake, Ind. The English Lake Gun Club, mostly made up of Chicago shooters, was a famous ducking ground in the palmy days of the Kankakee, and Mr. Greene was a familiar figure to many shooters of this city.

Mr. F. S. Selous, of England, a somewhat noted big game killer, who has done much hunting in Africa, passed through Chicago this week on his way from Wyoming, where he has been killing elk. Mr. Selous is stated to have killed 111 elephants and over 3,000 antelope, to say nothing of proportional numbers of other large animals. It is his boast that he did not do this for sport, but for the money there was in it. He is stated to have been killing elk in Wyoming on the same basis.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Vermont Deer Record for 1898.

WE give in more detail than the summary in our last issue the record of the 130 deer killed in Vermont during the month of October, 1898, and reported by postmasters:

Addison County.—Bristol 1, Leicester 1, Lincoln 3, Hancock 1—6.

Bennington County.—Woodford 3, Searsburg 1—4.

Caledonia County.—Walden 1, Lyndon 1—2.

Chittenden County.—Huntington 1.

Essex County.—Brunswick 1, Canaan 1, Brighton 2, Norton 1, Concord 2, Granby 2, Lewis 1—10.

Franklin County—Swanton 1.

Lamoille County.—Eden 1, Belvidere 1—2.

Orange County.—Orange 1.

Orleans County.—Westmore 3, Morgan 1—4.

Rutland County.—Mt. Holly 1, Chittenden 4, Shrewsbury 15, Pittsford 1, Mendon 5, Sherburne 7, Wallingford 1, Pittsfield 1—35.

Washington County.—Roxbury 1, Fayston 1—2.

Windham County.—Dover 1, Windham 1, Somerset 1, Stratton 1—4.

Windsor County.—Baltimore 1, Ludlow 2, Hartford 1, Pomfret 1, Chester 2, Bridgewater 9, Plymouth 25, Barnard 1, Stockbridge 2, Royalton 1, Woodstock 2, Reading 7, Cavendish 2, Springfield 1, Rochester 1—58.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

New York State League.

Editor Forest and Stream:

The annual meeting of the New York State Fish, Game and Forest League was held in the assembly room at the Yates Hotel, Syracuse, Thursday, Dec. 8. There was a large attendance, notwithstanding the fact that the great snowstorm which visited western New York the night previous, and blockaded the railroads, prevented the delegates from that part of the State from being present.

The roll showed the following organizations to be represented by delegates:

Niagara County Anglers' Association, of Lockport—George W. Weaver, Wm. J. Jackman, David Miller.

Sundown Fishing Club, Poughkeepsie—Samuel A. Wood, Theodore A. Knapp.

Honest Fishermen's Club, Seneca Falls—James E. Medden, Ernest G. Gould, William J. Pollard.

Black River Fish and Game Protective Association, Utica—W. E. Wolcott, John W. Hicks.

New York Association for the Protection of Fish and Game, New York City—Robert B. Lawrence, G. O. Shields.

St. Lawrence River Anglers' Association, Clayton.—A. C. Cornwall, R. P. Grant, George H. Strough, W. H. Thompson.

Honeoye Falls Anglers' Association, Honeoye Falls.—Aaron Mather.

Fly Casters' Association, Canandaigua—C. B. Lapham, H. B. Whitney, F. A. Christian, A. C. Cappon, F. G. Hulse.

Fish and Game Association of Mannsville—E. L. Stone, G. R. Huestead.

Anglers' Association, of Onondaga County, Syracuse—C. H. Mowry, D. H. Bruce, J. H. Forey, George B. Wood. Alternates: Eugene McCarthy, J. E. Benkhardt, M. J. French, M. H. Swartz.

Spencer Sportsmen's Club, Lyons—E. T. Burnett, Henry Killick.

New York Division of the League of American Sportsmen—G. O. Shields, A. E. Pond.

The following clubs were received as new accessions to the League membership: Saratoga County Fish and Game Protective Association, Saratoga Springs; Fly Casters' Association, Canandaigua; Mannsville Fish and Game Association, Mannsville; Newark Fishing Club, Newark; New York Division of the League of American Sportsmen.

President W. S. Gavitt, of Lyons, in his annual address said in substance: "It is very gratifying to see so many delegates present, and in view of the storm of yesterday, which has detained many from the western part of the State, it is rather remarkable that there should be such a good attendance. The condition of the association at this time is exceedingly gratifying. During the past year, in accordance with a resolution adopted at our last annual meeting, the New York State Fish, Game and Forest League has been incorporated, and its membership is larger now than it was in 1897. In view of the fact that in the meantime the separation from the trap-shooting feature has been consummated this state of affairs is very encouraging. Several hundred copies of the constitution and by-laws have been printed and distributed. At a meeting of the trustees held in October a resolution was adopted urging each club belonging to the League, and the individual members, to push the work of increasing the membership. We have come to a point where our organization has been perfected in a good manner, and the rest depends on the efforts of the members. The future of the association will be just what the members make it. A number of clubs have written me that they will join the League when it gets strong enough so that it can control matters, but w ewant the help of all the clubs and want it now. The market influence is very strong, often working against us, and it is only by combined efforts on our part that it can be overcome. Last winter we made several recommendations to the Legislature concerning the game laws which were carried through. Among them was the repeal of Section 249, and the officers of the association did all in their power, and the influence of the clubs and members was exerted to bring it about. We may feel highly gratified at what was accomplished in the last Legislature. The success of the future work of the association depends largely upon the efforts which are made to increase its membership. It is believed to be wise not to recommend many changes in the game laws this year. During the meeting to-day the five-minute rule will prevail, and no one will be allowed to speak over that time without the consent of the convention.

Cornelius W. Smith, of Syracuse, chairman of the legislative and law committee, then presented his report. He said that according to all indications and signs of the times the game laws were in the best condition that they had been in twenty years. This is evidenced by the few changes that have been recommended this year. Four years ago we had over forty amendments proposed; last year the committee had twenty, whereas this year only four have thus far been suggested. We have eliminated several things from the game laws. One was the elimination from Section 141 of that clause which permitted the spearing of certain fish at all times in Oneida Lake and Oneida River. That is now out of the law, and I don't know where spearing is now permitted. Section 34, which provides for a bounty on nets, was enacted, but the Legislature doubled the figures which we recommended in a large number of cases. The result is that probably $25,000 has been paid by county treasurers or is owing on certificates for the destruction of nets during the past year. On account of the expense there has been a hue and cry all over the State. There is no question but what the bounties are too high, although the law is good in general effect. The committee suggests that the bounties be reduced. It is believed that the closed season for wildfowl should extend from Jan. 1 to Sept. 1. The wildfowl are scarcer in central New York this year than they have ever been before. On Oneida Lake, which is one of the best waters for ducks, there has been no shooting this fall. People who spend a great deal of time there say that where they have usually got twenty birds they can now consider themselves lucky if they get two or three. The law committee recommends that the closed season for bass begin Nov. 15 and end June 15. This would shut off the market during the six weeks between Nov. 15 and Jan. 1, and we believe it would be a good thing. Last year, when a change was made in the law protecting squirrels, which had previously been included in a section with rabbits, the protection was removed from the latter. The committee has received a recommendation that there be a closed season for rabbits.

A. C. Cornwall, of Alexandria Bay, treasurer of the League, reported as follows: Receipts, including the balance on hand last year, $206.29; paid bills amounting to $116.11; balance on hand, $90.18. The report was accepted.

At the meeting held in December, 1897, a resolution was adopted to retain as members all clubs that then belonged to the old association. The books of the treasurer contain the names of the following organizations, besides those previously mentioned as being represented at the meeting:

Syracuse Gun Club, Onondaga County Sportsmen's Association, Onondaga Gun Club, Auburn Gun Club, Canandaigua Rod and Gun Club, Central New York Fish and Game Club, Seneca Falls; Conesus Lake Fish and Game Protective Association, Rochester; Franklin County Fish and Game Protective Association, Malone; Genesee Valley Protective and Propagating Fish and Game Association, Rochester; Steuben County Fish and Game Association, Bath; Erie County Fish and Game Protective Association, Buffalo; Oswego and Jefferson County Fish and Game Protective Association, Lacona; Long Island Gun Club, New York; Naples Fish and Game Protective Association, Naples; New Utrecht Rod and Gun Club, Brooklyn; Rochester Rod and Gun Club; Chemung County Fish and Game Protective Association, Wellsburg; De Ruyter Sportsmen's Association, De Ruyter; Dunkirk Fish and Game Protective Association, Dunkirk.

A committee consisting of Messrs. Lawrence, Cornwall and Grant was appointed to draw up a resolution regarding the clubs which were members of the old association.

Messrs. Wood, Thompson and Shields were appointed as a nominating committee, after which a recess was taken for dinner.

Promptly at 2 P. M. business was resumed. Mr. Lawrence, of the special committee on clubs, offered the following resolution, which was adopted:

Resolved, that the secretary correspond with representatives of all associations which have been identified with the old State association, and request that if it be their desire to continue their connection with the present association they should send to the said secretary the list of their officers and the number of their membership, together with the dues for the ensuing year, and further, that the secretary be empowered to inform them that in the absence of any heretofore expressed intention on their part to continue their association with the new organization, all dues due and payable prior to Dec. 1, 1898, are remitted.

On motion of C. W. Smith, the privileges of the meeting were extended to James Annin, Jr., of Caledonia, superintendent of State hatcheries; Mannister C. Worts, of Oswego, assistant chief game protector; Protectors Hawn and Lamphere, and Special Protector Everson.

The report of the legislative and law committee was then taken up. The first recommendation considered was an amendment to Section 110 of the game laws, making the bass fishing end Nov. 15.

Mr. Mowry said there were some people who wanted the bass season extended, and in order to conciliate that element, and also that fishing might be legal on Thanksgiving Day, he thought the season should not close until Dec. 1. He accordingly moved as an amendment that the League recommend that the bass season close on the latter date.

Protector Worts said that in Keuka and Seneca lakes some bass fishing was done as late as December. In the fall the fishing there is largely done in the night time. He thought it would be cutting the season off too soon to close it Nov. 15.

Superintendent Annin said he had never seen the water yet where many bass could be caught in November. It seemed to him that the later the bass season was extended the more chance it would give to the net fishermen.

Mr. Mowry said there were keepers of summer resorts or boarding houses who wanted bass fishing allowed until Jan. 1, but they would fall in line for Dec. 1

R. P. Grant said that on the St. Lawrence River no effort was made to catch bass after Nov. 15.

Chairman Smith stated that the law committee had not arrived at its recommendation without thoroughly considering the matter, and consulting with a representative of the fish commission.

Mr. Mowry's amendment that the season should end Dec. 1 was adopted.

The recommendation of the law committee to the effect that Section 70 should be amended so as to make a closed season for wildfowl from Jan. 1 to Sept. 1 was unanimously agreed with.

R. B. Lawrence said there should be a law on rabbits in order to prevent men from going out and shooting grouse and woodcock under the pretext of hunting rabbits. He moved that the League recommend that there be an open season for rabbits extending from Sept. 1 to Dec. 15. Carried.

Chairman Smith, of the law committee, in speaking on the proposed amendment to Section 34, said: It is well known that the bounty on nets is too high, and it is also well known that the bounty must be high enough to make it an object for men to go after them. The committee recommends that the bounty for the destruction of illegal fish nets should be as follows: For each scap net, drop net and dip net, $1; for each gill net up to 100ft. in length, $2, and $1 for each additional 100ft. or part thereof; for seines up to 100ft., $2, and $1 for each additional 100ft. or part thereof; for each fyke net with hoops under 4ft. in diameter, $2, over 4ft., $3; for trap nets, $10, and pound nets, $15.

Mr. Mowry said the law providing for a bounty on nets had resulted in the best fishing season known in twenty years. It is one of the best laws for the protection of fish that we have ever had. But the supervisors say we have exhausted the contingent fund to meet the requirements of this law. The State will reimburse the counties, but the country supervisors don't understand it that way. It is probable the Legislature will be importuned by the supervisors to repeal the law, and we ought to be prepared to meet them. I suggest that we should cut the present bounties in two. The doors have been open for men to get $3 for nets that cost $1.

The recommendation of the law committee was agreed with.

Mr. Shields suggested that the word "wild" should be stricken from the sections of the game laws regulating the killing, possession and sale of moose, deer and antelope. People having venison in possession out of season might say they bought the animal from a park. The committee reported in favor of the change, and it was sanctioned by the League.

Mr. Shields offered the following resolution: Resolved, That the law committee be instructed to ask such an amendment to existing statutes as will prohibit the sale of ruffed grouse, quail and brook trout at all times.

Mr. Mowry believed that grouse shooting should be prohibited for one year.

J. H. Forey, of Syracuse, said bundles of grouse had been seen hanging in front of stores without a shot mark on them. They were caught by traps or nets, and trout caught illegally were offered for sale.

Mr. Smith said that within ten weeks a man who owned a pond had been caught taking trout in a net out of a stream which the Anglers' Association of Onondaga county had been stocking for five years. There were eighteen trout in the net. The man wanted the fish to stock his pond.

Protector Worts was of the opinion that if the sale of grouse could be stopped it would be a very effectual way of protecting the birds.

The resolution was adopted.

On motion of Mr. Mather it was decided to recommend that the quail shooting should be restricted to the month of November.

The nominating committee reported in favor of the following officers for the ensuing year, and they were duly elected:

President, Cornelius W. Smith, Syracuse; Vice-President, Robert B. Lawrence, Long Island; Secretary, Ernest G. Gould, Seneca Falls; Treasurer, A. C. Cornwall, Alexandria Bay.

Legislative and Law Committee, C. B. Lapham, Canandaigua; F. J. Amsden, Rochester; W. E. Wolcott, Utica; A. E. Pond, New York; W. S. Gavitt, Lyons.

Auditing Committee, Aaron Mather, Honeoye Falls; Thomas D. Lunt, Dunkirk; G. W. Weaver, Lockport.

President Gavitt, in retiring from the chair, thanked the members of the League for the courtesy which had been shown him at all times. He was sure the new officers had been chosen wisely. The association is at the present time in the best condition to effect legislation and make its influence felt at Albany that it has ever been in. The association is stronger in numbers and new members are coming in. Mr. Gavitt desired to impress upon all the desirability of increasing the membership and having an organization in every county in the State. Better and more effective work can then be done. It would be wise if it could be done to send a missionary into every locality in the State to bring people in touch with the League. Mr. Gavitt, after again thanking his associates for their courteous treatment, relinquished the chair to President Smith.

A motion was carried extending the thanks of the association to the retiring president for the energetic, able and intelligent manner in which he has discharged his duties, and also thanking the other retiring officers.

President Smith said it had been his pleasure for a number of years to take a warm interest in the game laws of the State. He succeeded as chairman of the law committee a very able man, Mr. Van Cleef, of Poughkeepsie. The speaker was gratified at the fact that, whereas four years ago about forty amendments to the game laws were proposed, and last year twenty, to-day there were only seven. He felt that as chairman of the law committee he had been able to accomplish some good work, and he proposed to continue to do his best for the welfare of the League. He said that at the League meetings he met only true sportsmen—men who are true to the law. When Col. Roosevelt was in Syracuse, continued Mr. Smith, I made up my mind that I would not greet him in a conventional manner, and when I took his hand I said: "True sportsmen are true men." "What kind of sportsmen?" he asked. I replied, "Sportsmen of the rod and gun." He said, "You are right," and I felt the grip of his hand long afterward. We cannot all be Roosevelts, but we can be like him, true sportsmen. I am glad to see that the association is keeping up its membership. Last winter in Albany I had the pleasure of pronouncing an obituary on a bill for hounding deer. When we get a good law we should stand by it, and not change it without good reason. Another thing that we have been doing is to try to get a uniform law for the State. I am pleased with the entire la wcommittee appointed to-day, and especially pleased that the labors of my first assistant have been recognized by making him chairman of the committee.

Col. Theodore Roosevelt was elected an honorary member of the League.

Mr. Mowry said the Onondaga County Anglers' Association employed a special protector. For some years it has received appropriations from the board of supervisors to aid in enforcing the game laws. "Now," continued Mr. Mowry, "there is an organization which has gone before the board of supervisors with a petition asking them not to appropriate $200 for our association. This association has gone further than this. They have gone before the Legislature to ask them to repeal laws which we suggested at our meetings, and which have been passed for the benefit of sportsmen. They want us to give them a chance to fish with nets."

George R. Peck, of Auburn, was elected an honorary member of the League, until such a time as he may become an active member by affiliation with some club.

W. E. Wolcott, of Utica, spoke of the good effects which the anti-hounding and anti-floating law is having in the Adirondacks, and of the gratifying increase in the number of deer in that region. He also referred to the reckless manner in which the forests are being cut away, and in conclusion offered the following resolution, which was unanimously adopted:

Resolved, That the vast and increasing lumber operations in the Adirondack wilderness threaten irreparable damage to the future interests of this State, by reason of the evil effects which the continued thinning out and removal of the forest will surely entail. The wilderness is of the greatest importance as a source of water supply and because of the influence it has on meteorological and hygienic conditions. Public sentiment is strongly in favor of State ownership, and the electors have repeatedly indicated at the polls their hearty approval of forest preservation. In view of these facts, and in the interests of hunters, anglers, tourists, invalids and guides, and for the welfare of the people of the whole Commonwealth, we earnestly urge the Legislature to provide funds for the purchase of additional lands in the Adirondacks.

Superintendent Annin exhibited two small muskallonge which were hatched May 19, and put in a bottle Aug. 19. The growth attained in three months was about 6in. The muskallonge hatched at the Chautauqua Lake hatchery were placed in a small pond, and it was found necessary to feed them on minnows. The fish turned cannibals, and one muskallonge 3in. long was found with one 2in. in length nearly swallowed.

There was some talk about Section 76 of the game laws, which relates to the transportation of grouse, quail and woodcock, and it was deemed a wise provision.

Mr. Ackerman said: While I was fishing and shooting near Redfield, a man told me that two years ago he snared 1,400 partridges. He shipped them out in cheese boxes labeled cheese. As 800 of the partridges were females, which would have reared broods, that means several thousand less birds in the woods.

Protector Worts said the thirty-three active workers on the State game protective force had much to do. About the time the deer season opened seventeen of them were sent into the Adirondacks to look out for violations of the law. This left some of the other lakes and streams open. The territory of some of the protectors is large, and when they are shifted it is difficult to cover it as it ought to be. The force is not large enough.

It was declared to be the sense of the meeting that the force of protectors should be increased, the salaries increased and the moiety system abolished. Adjourned.

W. E. Wolcott.

Utica, N. Y., Dec. 9.

New Jersey Quail Stocking.

[From the report of the Fish and Game Commissioners.]

Two years ago your commission began the distribution of quail, and that the work has been fairly successful is attested by the replies to inquiries made of the persons to whom the quail were sent. New Jersey is a State in many ways admirably adapted to the quail with the serious drawback of occasionally a very severe winter destructive of life in the open fields, particularly so of the quail. There is little doubt that even before the advent of the white man to these shores there were periods when the territory at present covered by the State of New Jersey was wholly devoid of quail, and that such periods were followed by others when the cheerful note of Bob White was heard all about. Undoubtedly it frequently took years to undo the havoc wrought by one severe winter. With the advent of civilization these conditions were somewhat modified, for, although the climate may have undergone no change, men took the precaution to provide shelter for the birds, and to replace them with others brought from a distance whenever their extermination was threatened.

More time and money have probably been expended in the distribution of quail than of any other species of fauna, the reason for which must be sought in the affection which the bird inspires in all who are in any way susceptible to the charms of bird life. On this account your commission entered upon no untrodden field when it began the work of replenishing the stock of quail in New Jersey. Years ago the prolific numbers of the quail in the Southern States attracted the attention of the people of the North, and these birds were brought on here in the hope that they would thrive here, a hope, alas, too frequently blasted. The Southern quail, when placed into the fields of this State, apparently did well for a time; they readily accommodated themselves to their new surroundings, but with the advent of cold weather they disappeared. In nearly every instance it was found that they bred just as well as they had done in the warmer climate and that they remained here "until the season opened to shoot them, and then they were gone," as the hunters put it. A little observation soon solved the mystery of their disappearance. The cold of our winters was too severe for them, and as the mercury descended they sought warmer places. Their instinct taught them to seek the water courses where it was warmer than in the hills and fields; they followed these courses down to the sea and then proceeded southward, thus being entirely lost to the people living in the northern part of the State. In ordinary winters the birds frequently remained through to the following spring in some of the southern counties of the State, thus affording an explanation of the presence there at times of different varieties of quail. When, however, the cold was more than usually severe, they pursued their journey southward, passing either into Pennsylvania or Delaware, or ending their existence in the waters of Delaware Bay.

Under such circumstances it is not at all surprising that the people tired of bringing here the quail of the South, and that they turned their eyes westward, where the quail were accustomed to just such winters as are experienced in New Jersey. Southern quail can be purchased at a low figure in the markets; the Western birds command a higher price, both on account of the greater distance the birds are brought, thus increasing the danger of accidents en route, and because the authorities of the Western States regarded with displeasure the trapping of the birds, and in many instances passed laws absolutely prohibiting the removal of birds. But it would have been folly to have persisted in bringing quail hither from the South; such a proceeding might have produced a passing gratification, to be followed, however, by disappointment at the disappearance of the birds. For this reason your commission rejected all offers of quail from the South, believing that a dozen quail from the West would produce better results than a hundred from the South. This has been the experience of others in individual instances, and it proved just as true when applied to the larger scale of stocking an entire State. As will be seen from the letters subjoined, the birds brought hither have remained here, and now constitute an important part of the bird life of New Jersey.

Quail have been distributed as follows in counties: Atlantic 45, Bergen 180, Burlington 240, Camden 30, Cape May 75, Cumberland 160, Essex 0, Gloucester 280, Hudson 0, Hunterdon 100, Mercer 214, Middlesex 140, Monmouth 190, Morris 190, Ocean 0, Passaic 173, Salem 190, Somerset 60, Sussex 215, Union 60, Warren 60; total 2,602.

From Mr. John B. Lozier, Oradell, Nov. 8, 1897: The quail you sent me were all liberated, and I am pleased to say that this time turning them loose has been successful. I know of several large covies, nearly all near farmers' houses, who do not shoot, and I have made arrangements with them to look out for them and see that they are not disturbed. The local shooters now that they understand what I want to do have promised to give no trouble, and I think everything is smooth for the birds.

From Mr. Warden Van Kirk, Sparta, Aug. 23, 1898: The quail put out here a year ago wintered well, and I saw a good many this summer. Thirty more quail were put out last spring, and several flocks have been seen this summer.

From Mr. William W. Woodward, Newton, Aug. 24, 1898. The thirty quail sent me last spring were turned out in several places, and as far as I have been able to ascertain they have done splendidly. On one place near town there is any number of birds. I believe every pair of the seven placed there bred, and have large broods growing nicely.

From Fish and Game Warden Harry R. Dare, Bridgeton, Aug. 24, 1898: The quail which were liberated in this county have done remarkably well, and I have never known a time when there were more quail than during the present season, both in this and in Salem county.

From Mr. James I. Crane, Franklin Furnace, Aug. 25, 1898: I am glad to report success. Still, I have not followed them up so as to be able to find any broods. I have gone in their neighborhood every week or so, and have heard them whistling.

From Fish and Game Warden Frank L. Shafer, Mt. Arlington, Aug. 25, 1898: The quail that were sent here were placed on the properties of three different persons, and they have increased very much. I should judge from what I have seen, and from what I have been told by different persons, that there are between 400 and 500 quail here, the result of the stocking done by the State.

From Mr. William H. Leupp, New Brunswick, Aug. 25, 1898: I am happy to say that the quail are doing very well; they were let out on the borders of Middlesex county, and have been heard and seen. They have taken very nicely to this latitude, as their broods indicate.

From Mr. John M. Henderson, secretary of the Woodbury Sportsmen's Association, Woodbury, Aug. 25, 1898: The quail sent our association last spring were received in good condition, and were promptly liberated by the members among the farmers of our county, who had feeding grounds. More attention was paid to good cover and good cover and water, as our experience teaches us that something more is required than good feeding grounds, as birds are often placed in open ground, and the whole covey is killed the first day of the open season. We lost but one bird out of the fifty received; that one was very weak when received. We have received good reports from all parts of our county where the birds were placed, and the outlook is good. The birds sent us were the best we have handled in an experience of about twenty years, and if all received as good birds as we did sportsmen may expect a good time.

From Mr. Henry P. Davis, Davis, Aug. 25, 1898: Most of the quail we received were in good condition, but five died soon after being turned out. The others became very tame, frequently coming up to the house to feed. Then they would return to the woods and banks. We hear them calling each other every day, and have seen several flocks of young birds. They appear to be doing very well, although it has been very rainy and wet for them.

From Mr. H. S. Kinmonth, Asbury Park, Aug. 25, 1898: I can safely say that the quail you sent me have done very nicely. We see evidence of them all the time.

From Fish and Game Warden James L. Tooker, Jr., Perth Amboy, Aug. 25, 1898: The quail sent to Messrs. Muirhead and Hillman were set free on farms, some near Cheesequakes, on the Rowe farm, and at Ernston and Runyon. These places form a circle to the south and west of South Amboy, distant from two to five miles. Considerable grain, such as wheat, rye and oats, are raised in that section, the unused lands consisting of swamps and hilly woodland, a greater portion being covered with woods, the upland being sandy. This neighborhood has always been a good quail country. The thickets bordering the swamps consist of a small growth of scrub oaks, filled in with a tangled mass of briers, making an impassable barrier for both man and dog, and forming a natural protection for quail, where they can breed undisturbed. The quail have greatly increased in this section since the present board of commissioners have been in office. I have recently made several trips through this part of the county, and the call of the quail could be heard continuously, and that the quail released this spring have mated and increased in number there can be no doubt.

The quail sent to Assemblyman Quaid were released in the vicinity of Sayreville, making a continuous line of stocked country in southeastern Middlesex. These birds will breed and scatter to the southward, the Raritan River, salt meadows and clay mines preventing them from going north.

The quail throughout that section of Monmouth county lying to the south of Matawan, and running to within a few miles of Freehold, have greatly increased in number within the past few years, so much so that I do not believe it necessary for the commission to liberate birds there.

During the early part of the present summer a bevy of quail, consisting of ten or twelve birds, made their appearance in the southern part of this city, along the Raritan River, feeding in dooryards and in vacant lots. They mated and nested adjoining the meadow lands to the westward of the Central Railroad tracks, on property belonging to the Watson estate and the Marcy stove works, consisting of about 100 acres. Their calls can be heard every morning and evening. The owners of the lands upon which these birds have located have taken a great interest in them, and will do all in their power to protect them. There is no grain raised within four miles of Perth Amboy, and where these birds came from is a mystery. With this exception no quail have been seen in this vicinity for years past.

From Fish and Game Warden George W. Dunham, Flemington, Aug. 25, 1898: You sent me 100 quail; they were placed upon good ground near where the pheasants were released, and received the same protction, and there are literally hundreds of them in that vicinity. When received they were stocky and hardy, and their young are equally as large. The quail have scattered more than the pheasants, and I find them in different parts of the county, as they are readily distinguished from our native birds.

From Mr. J. N. Calvin, Lafayette, Aug. 25, 1898: Quail

e more plentiful than at any time within my recollec-on.

From Mr. J. H. Ludwig, Montague, Aug. 25, 1898: I o not know that I have ever known quail to be as entiful as they are at the present time.

From Mr. George Van Buskirk, secretary of the Farm-s' Game Protective Association of Bergen County, ackensack, Aug. 26, 1898: The quail are doing especial- well, there being an abundance of birds all over. Right this vicinity we have no difficulty in finding from ten twenty coveys of birds almost any time. The reports e all the same from every section where we put the ids out.

From Fish and Game Warden Gus Hilton, Anglesea, ug. 26, 1898: The thirty quail you sent me to put out d excellently. There are more quail in this county than ere have been for a great many years.

From Fish and Game Warden Edward Hill, Rocks-urgh, Aug. 26, 1898: The quail which were sent me ve done very well. Every farmer, on whose property rds were released, reports numerous young birds. Two ir were released in my peach orchard, and last week I d some friends put up two nice bunches.

From Mr. Joseph B. Righter, secretary of the Denville ame Protective Association, Denville, Aug. 26, 1898: Ve are pleased to note that the quail you favored us with ve prospered and propagated finely.

Side-hunt, Concert and Ball.

MOLINE, Kan.—*Editor Forest and Stream:* I enclose ou herewith a circular announcing the organization of a rand hunt, game supper, concert and ball by the Gun lub of Howard, Kan., which was the most original and ccessful affair I have heard of in a long while. I was ot fortunate enough to be able to participate in it, but a scription was given me by the lieutenant, Messrs. Mc-ee and Rush. Through the efforts of Mr. Mark McBee, oward has been famed for its sports, and this grand fair is significant of the interest taken in game shooting ere by all the leading people. The programme was us announced in the preliminary circular:

RAND HUNT, GAME SUPPER, CONCERT AND BALL.

A grand hunt has been organized, and will take place on Wed-sday, Nov. 16, 1898, the game killed to be donated to Oklahoma mp No. 935, Modern Woodmen of America, to be served at grand public supper, the afternoon and night of Friday, Nov. 18. he hunt will be in the nature of a friendly contest between two mies of hunters, with Capt. A. M. Jackson and Lieut. H. C. ush in command of one side, and Capt. L. Scott and Lieut. ark McBee in command of the other. The following will be the ale of points for various kinds of game: Possum, 50; jackrabbit, ; duck, 25; quail, 10; plover, 10; squirrel, 15; cottontail, 5; wild ose, 50; prairie chicken, 20; snipe, 5.

The hunters may form themselves into squads at their own nvenience, and use their own judgment as to the manner and ace of hunting, the game to be delivered to the proper com-ittee in Howard not later that 12 o'clock noon, Thursday, the th, at the city building in Howard, where committees will be hand to receive it. Any others desiring to engage in the nt can do so; if convenient, send your names to either Lieut. cBee or Rush; if not, go ahead and hunt, and when you bring the game you can be credited to the side whose next choice may be.

The supper will be served from 5:30 P. M., Friday, Nov. 18, to A. M. following. There will also be a grand concert by the oward band and orchestra, free to patrons of the supper, to be llowed by a grand ball, beginning at 8:30. All are invited to the ntr supper, concert and ball. Mark McBee, Dr. H. C. Rush, eutenants.

The hunt took place Wednesday, Nov. 16, and every ne returned home tired, but well repaid for the hunt.

On Thursday and Friday the ladies of Howard pre-ared the game, and Friday evening the greatest crowd hat ever gathered together in Howard, to enjoy a de-ghtful evening, were on hand at the handsomely deco-ated hall with a floor space of 140 by 75ft. Seven hun-reds covers were laid for an early supper, which was strictly game," consisting of: 50 dozen quail, 12 opus-ums, 36 jack rabbits, 198 cottontails, 92 squirrels, 6 wild eese, 27 prairie chickens, 72 snipe. The ladies are orthy of much praise for the dainty manner in which ey prepared the game and served it with salads and ther delicacies. After supper the dancers, consisting of venty-eight sets, enjoyed themselves in the two-step altz and other dances to the music rendered by the How-rd Orchestra. At an early hour of the morning a uncheon was served, and thoroughly enjoyed by all those ho were game enough to stay with the crowd to the st.

The members of the Howard Gun Club are so pleased ith the results of their undertaking that they have de-ded to make their yearly hunt a recognized event in l southern Kansas, and in fact the entire West.

Boston Sportsmen.

BOSTON, Dec. 9.—E. M. Gillam, of the Boston Adver-ser, and his brother, A. M. Gillam, of the Philadelphia ecord, have returned from thei rannual quail shooting ip to Vineland, N. J. They secured over 100 quail from veral days' shooting, but were much disappointed as to ng-neck pheasants, as Mr. Gillam explained in the OREST AND STREAM last week. He put out over fifty uail last spring, and calculates that their luck in shoot-ng was largely due to this restocking, in spite of all the fficulties he met in regard to other hunters having evi-ently commenced shooting before the opening of the ason. As Mr. A. M. Gillam explains in the FOREST AND TREAM, it is of but little use to attempt restocking with ither pheasants or quail when the small berry farmers ave the notion that their fruit is destroyed by these irds, and when they even resort to Paris green to rid emselves of the troublesome birds.

Two or 3ft. of snow in the Maine woods has made deer unting difficult, and Boston sportsmen are mostly at ome. So far as they are concerned, the season is virtu-lly closed. Not so the native Maine hunter. He is after he deer on snowshoes, and judging from the number oming into Boston markets, he is making a good deal of howing. More deer have been received here the past ree or four days than for any period of the same length his season. The deer comes straight into the markets, nd curiously the records of shipments by express are ot very extensive. Thus it is certain that they are not he deer killed by returning sportsmen, but the results of legal shipments out of that State.

BOSTON, Dec. 12.—Late reports from the Maine and New Hampshire big game regions mention very deep snow for the season, with good snowshoeing, and lots of deer taken. Looking over one Maine paper last evening I counted sixty-one deer slain, and all by local nimrods; not a deer to outside sportsmen. The fact of the matter is that Boston and New York hunters are generally done for the season. Capt. F. C. Barker called on Saturday, fresh from the Rangeley woods. He remarks that he never saw better snowshoeing. He took a fine buck early in the week. The paper, noted above, only covered one section, with its game record, Rangeley and Dead River. From further east the reports are fully as strong concerning the slaughter that is being carried on; mostly by hunters and guides in the State. This only serves to illustrate with greater force what has so often been stated, that Maine game is in much more danger from her own citizens than from outside hunters. This is not at all strange, and is just as it should be. The value of a fine deer is great to the farmer or backwoodsman, but he should be willing to obey the same laws for the protection of game that he wants the city sportsmen to respect. The Maine Legislature is soon to convene, and the backwoods farmer will be there with his petition to allow him to shoot deer at times, because the deer occasionally get into his crops. I should like to come under obligations, if the thing could be fairly done—fairly estimated—to pay for every dollar's worth of crops destroyed by deer last season in Maine, for a single $100.

It may be stated on the authority of Mr. Walter L. Hill, treasurer of the Sportsmen's Show last season, that the association will not repeat that show the coming spring. What other parties may do it is not yet certain, but the association of last year will give no show this year. It has been suggested that some of the attractions of the show to be held in New York the coming spring were to be brought over later to Boston, but nothing definite is yet decided. Another year the Sportsmen's Association is very likely to hold a show in Boston.

Mr. Walter L. Hill was much pleased to receive the other evening, at his house, a beautiful hall clock, as a token of the appreciation of the members of the Sportsmen's Association, for the admirable manner in which he performed more than his share of the labor involved in so well carrying out the financial affairs of the show last March. The clock was accompanied by a letter signed by nearl yall of the associates who put in their time and money, and made the show a success. SPECIAL.

Birds in the Great Storm.

EAST WAREHAM, Mass., Dec. 6.—*Editor Forest and Stream:* The hard storm of last week made it quite difficult for our birds to get their customary food. I saw a number of song and field sparrows around the barn and hen house, where we had cleared the snow away; they were feeding on cracked corn and hayseed. One belated crow blackbird came up and a few robins. The meadow larks were very tame, and came right up to the door. We fed these birds, and it was worth while to watch them. To-day, as I was cutting up a large pine that the wind had blown over, I saw four quail, the remnant of a flock of fifteen, half of which never got beyond the age of "peepers," these four seemed well and lively. Of course there may have been others. On Sunday Mr. N. A. Shurtleff saw fourteen in the Wareham road from Indian Neck. I hope these will last till close of the season.

Shortly after seeing the four quail I heard an entirely new voice, it only called once, and as near as I can spell it said: "Squaw-clurec-crurec-clurec," harsh and peafowl-like in sound. I looked, and on the edge of the salt marsh 200ft. away saw a Mongolian pheasant. There have been three wandering about the fields nearby for some weeks, and this was one of them. They are a part of Mr. Wm. Minot's stock, and I am only too pleased to see that they are spared by the gunning element here—which usually spares so little.

I like to hear a new voice, and once have heard the clear, loud whistle of the European widgeon; it was on the marsh opposite the city of Tacoma, Wash. I shot the bird; a male in fine plumage. My friend, E. T. Harris, shot one at Nisqully, and my brother, A. B. Savary, killed one I think at Tacoma. There we used to see the spotted blackbirds; often in Annie Wright's Park there would be a large flock of blackbirds, and among them several with more or less white in spots. I have never seen any blackbirds with those spots in any other locality.

Will some one tell us why those little birds in their nest in the foretop of a buffalo bull were not all shaken out when flies annoyed him? I would rather find that bird's nest than have killed that mighty moose whose horns I saw in Sheard's fur store in Tacoma. The bird who builds on the forehead of the buffalo is the same one who migrates on the crane's back, though I must say that I have heard the sound of little birds with a flock of sandhill cranes, and tried my best to see them, but could not.

WALTER B. SAVARY.

St. Louis Notes.

ST. LOUIS, Dec. 5.—Sportsmen in Missouri are still discussing the game shipment law. The original law passed by the Legislature prohibited the shipment of quail, prairie chickens and pheasants for a period of five years. The law was enacted in 1893. In 1895 the law was amended by adding "deer and turkey" to the prohibited shipments. It has been claimed by some that this amendment extended the shipment time two years. Recently the State game warden asked the opinion of the attorney general of this State with regard to shipping quail. He stated that the law expired this year, and that quail can be shipped. He stated nothing in his opinion about turkeys and deer, and it is held by some that these cannot be shipped until 1900. One of the best legal authorities of St. Louis informs me that in his opinion the shipment law has expired, that the amendment made in '95 did not affect the date of the law, but simply added "deer and turkey." This seems to be the real status of the case. Game dealers, however, are very shy of openly shipping turkeys and deer.

This has been the most unsatisfactory fall season for fishermen known for years. Generally there is good fishing in South Missouri and North Arkansas until at least the middle of December. This year, however, a cold wave swept down on Thanksgiving, and since then there has been no fishing worth mentioning. Hundreds of anglers left St. Louis Thanksgiving eve, but were frozen up, and compelled to return.

The officials of the Territory of Oklahoma seem to be enforcing the game law with earnestness. A couple of "leading citizens" of St. Joseph, Missouri, have been arrested for illegal shipments of quail. Other prominent men have been indicted for shooting quail out of season, two dealers for shipping out of season, and an agent of an express company. If conviction can be had in these cases it will be a great gain for better game production.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

There is no more lastingly appreciated holiday gift than a good book. For one who is interested in outdoor sports the volume may well be one of those included in the "Forest and Stream's" list. And do not forget to order in good season.

Skates and Other Rays.

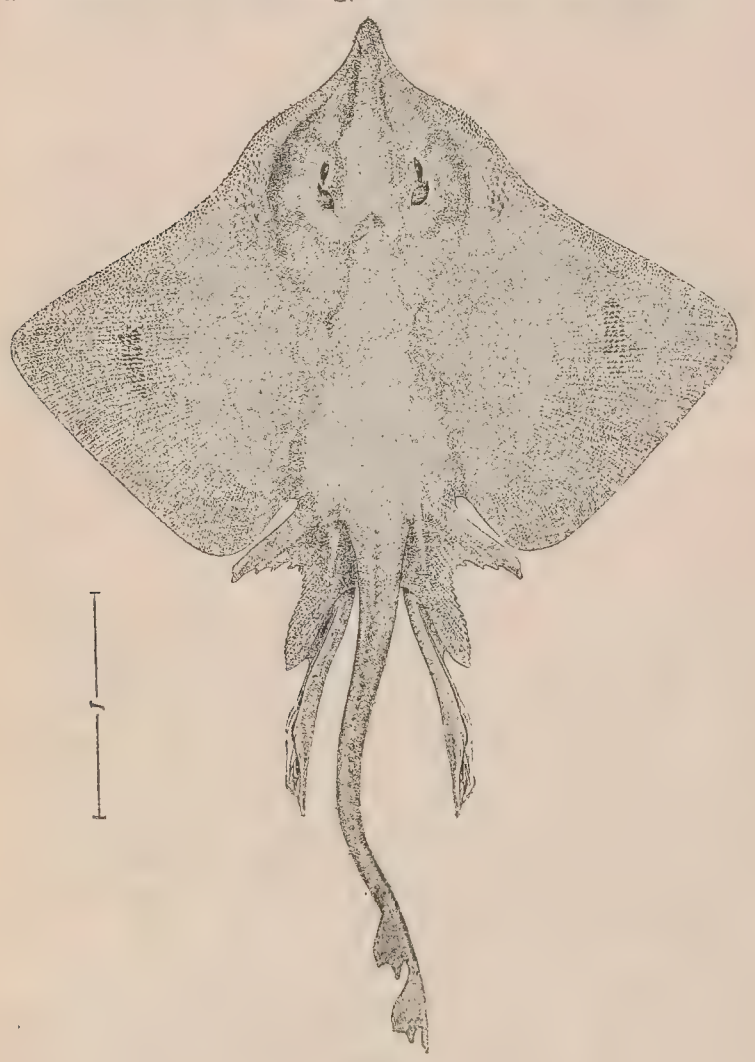
BY FRED MATHER.

THESE curious fishes are allied to the sharks, differing from them in form, and in some points of structure as well as in habits; but, like them, are not true bony fishes. On our Atlantic Coast we have five skates, as well as other rays, for all skates are rays, but all rays are not skates; just as all teal are ducks, but all ducks are not teal. The frequency with which the salt-water angler lands an awkward skate is the reason that I have been asked to write about them. They are not awkward in the water, nor much so in the boat. Perhaps it is the angler who is awkward in getting one off his hook without getting his fingers in its clam-cracking jaws. If that happens the men in neighboring boats, and often on shore, will know by the angler's remarks that something has displeased him, and they will not need ear-trumpets to assist them to that conclusion.

How to Unhook a Skate.

The mouths of all the rays are on the under side. In the skates the very generous mouth has rolling lips, covered with a pavement of flat, rounded teeth, and no word expresses the arrangement as well as "pavement," for the teeth are set close, like cobblestones in a street, there being from thirty to ninety rows in each jaw, according to the species. When a skate comes unwillingly over the side, flapping its great pectoral fins, it is best to hypnotize it with a club, an oar or a boot heel before going further; but in the hypnotic state it may gasp and unconsciously crush a finger or two, a thing that is objectionable to many anglers.

Make assurance doubly sure by putting something in its mouth, just as your dentist treats you at times. An oyster shell set edgewise, your meerschaum pipe or any old thing will do to keep his face open until you can find in what portion of your captive's anatomy your hardware lies. The chances are that the hook is in the stomach, and if so a carefully conducted post mortem will reveal the fact, but many anglers prefer to save time by cutting the snell and letting the skate digest the steel with the bait, and who can say that a little iron in his system might not be as beneficial as it is to many of us?



The salt-water angler gets many things for which he has no use, but which have use for his bait. Among these are sculpins, toadfish, puffers, spider crabs, dogfish and skates, and all of these things, except the crabs, have a way of swallowing a bait in a quiet manner, giving the angler no warning until they move off. Then they have the bait so securely pouched that a surgical operation is necessary to recover the hook. This takes time, and as the turn of the tide is his best fishing time he begrudges every minute of it that is wasted on these pests. Of course I am writing of the angler who anchors his boat and uses the "drop line" or the rod and reel in bottom fishing. The troller for bluefish, nor he who anchors and "chums" for them, is not troubled with these fishes, but the one who casts his bait of menhaden or lobster tail into the surf for striped bass occasionally brings out some of the things which are named above, but he is on the rocks, where he finds material to quiet his unsought catch.

Our Five Skates.

I have said that on our Atlantic Coast we have five species of the skate. All of these lay eggs in curious black, horny, square cases from 1 to 3in. long, with two long tubular horns at each end, for all the world like a hand-barrow. Through these tubes the embryo gets a circulation of water, and when ready to leave the case, after absorbing the yolk-sac, it emerges from the square end, the other being slightly concave. These cases are washed ashore, and those who are unfamiliar with them take them for some vegetable formation. In England they are called "pixey purses" and also "sailor's purses." I have watched the development of the embryo by removing it from the case and putting it into a bowl in which salt water dropped. The embryo was not observed from the start, but was ¾in. long, and with eyes well developed, but the pectoral fins had not begun to expand. The yolk was a flattened disk 1¼ by ¾in., with a thickness of ½in. It was soft, like the yolk of a hen's egg, and instead of being attached directly to the abdomen, as the eggs of all fishes which I had previously handled are, there was an umbilical cord of an inch in length between the embryo and the yolk, hence the necessity of the horny covering. Released from the case, with the yolk resting at the bottom, the little fellow made semi-rotations above the yolk at the length of the cord, showing that it was lighter than water, and so it grew

until the umbilicus was absorbed, and it gradually became a flattened, miniature skate.

The smallest and most common of our Atlantic skates is the "tobacco-box" (*Raja erinacea*) and it is spiny. Raia, or raja, is an old Latin name for an order of flat, cartilaginous fishes, allied to the sharks, but having the gill slits underneath, and includes the sawfish, the skates, the torpedoes, sting-rays and several more. As I don't wish to make this article so bloomin' scientific that no one will read it, I will try to avoid all the dry technicalities possible; but the nomenclature of science is necessary in order to determine which fish we are discussing, as fishermen's names differ. Now, the specific name, *erinacea*, has no reference to Erin's green isle, but to a hedgehog, because both are prickly; and there you are. As this little skate only grows to a length of 18in., and half of that is a long, slim tail, we can easily rec-

BARN-DOOR SKATE.
From Fishery Industries.

ognize it among its larger brethren. It has large spines on the front of the pectorals, and smaller ones on the head and back; is light brown, with round dark spots.

Some Scientific Explanations.

Since writing this, a friend, one of those inquisitive fellows who "want to know, you know," sat in my study and looked at the plate of a skate. Said he: "What you have said may be all true, but where are the pectoral fins? I only see two little fins away down on the end of the tail, which may pass muster as dorsal fins, but I am a sinner if I see any pectoral fins. Perhaps they are underneath; they are the gill or lung fins, aren't they?"

"Thanks, my boy; I was going too fast, and if what I have said is not plain to you it might not be to others, so I will explain. As you look at this picture of a barn-door skate you will see two great wing-like projections reaching from the tip of its nose to the insertion of the tail; these are the pectoral fins, and now that you know this, just let me go on writing while you sit down to smoke and read."

Our species next in size grows to a length of 2ft., always allowing half the length for the tail, and is brown, with dark bars and blotches. Its prickles are small and sharp, and from this feature it is named after the brier rose, *R. eglanteria*. It is not at all common, and many fishermen do not know it.

Another species not very common is the *R. radiata*, which has a lot of large spines about its head, and a row of them extending down its back and tail, which are very strong. Once, while fishing near Gloucester, Mass., I brought in a large specimen of this fish, which in its

THE SEA EAGLE.
From Brookes' Fishes.

struggles not only ripped my trousers and drawers from thigh to knee, but made some scratches on the covering which nature had furnished me that were sore for some time after. Further on I will speak of wounds by fish.

Then we have what the fishermen call the "big skate," the *R. ocellata*, a name which means eye-spots, and this fish, though it grows to be 3ft. long, is not the largest skate, notwithstanding the fishermen's name. It is much like the little one first named, but is more thorny, having many rows of spines along the back and on the sides of the tail. The two largest spots on the rear of the pectorals have a white ring with a dark center. This species is sometimes eaten.

After naming one fish the "big skate," and finding one that grows to over 4ft., there was no way to get out of it but to call the last fellow "the barn-door skate." Being comparatively smooth, the scientists called it *R. lævis*, yet its back is not the slickest thing you ever rubbed your cheek against, and adown the tail there are a few briers that might chafe strong corduroy, especially on the back of the female, which in all this tribe is more strongly armed. The big barn-door has light spots, which have darker rings around them, and has the minimum rows of teeth. It was Mitchell who named this fish "smooth," but he would never have done so if he had once stepped on one with a bare foot, as I once did, while bathing; I did not put on a shoe, nor foot on ground, for six long weeks, and at one time there was fear that the leg might be amputated.

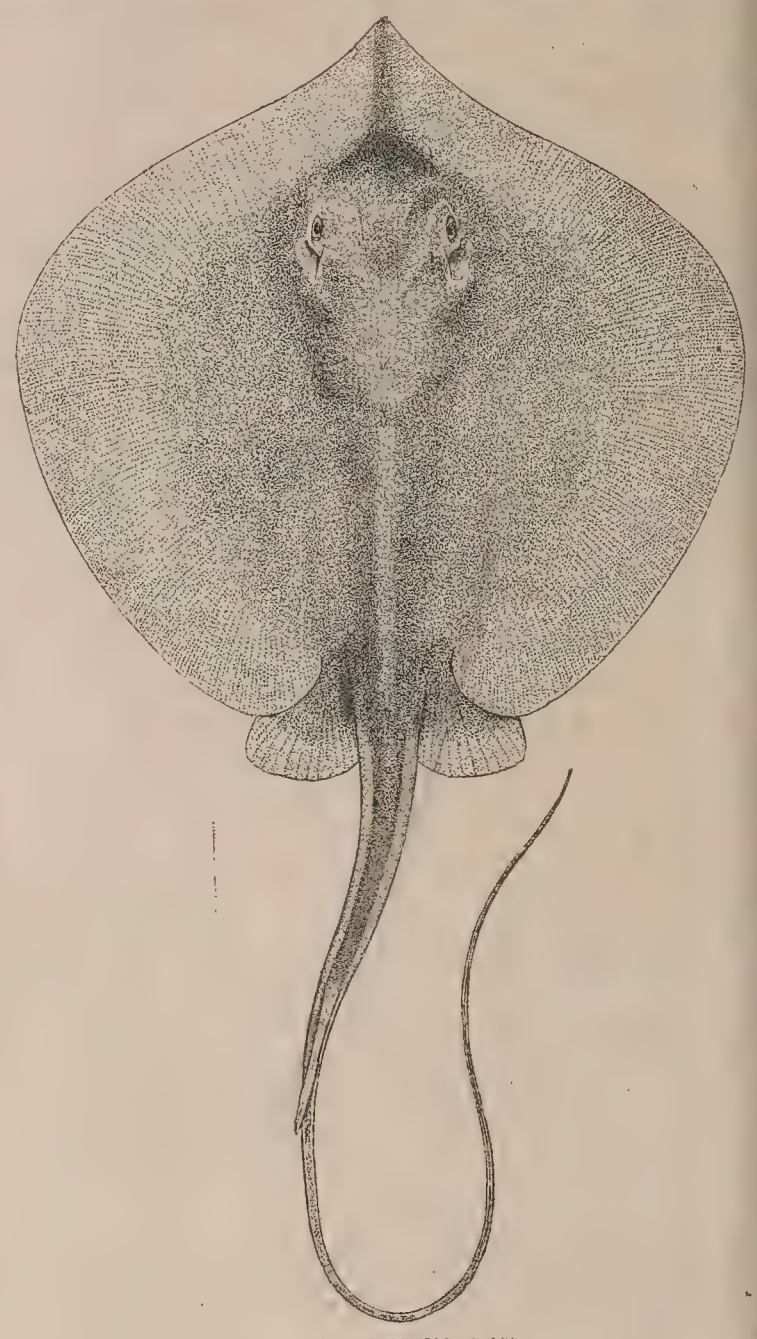
Poisoning from Fish Wounds.

Be it known to all men that there is no fish which has poison sacs behind its teeth, as in the serpents, or hollow stings with a poison reservoir behind as the bees and some other insects have. All these poisons come from a hollow tooth, or sting, connected with a reservoir of venom. The mosquito and other insects have some similar way of poisoning our skins, but I don't know how they do it, as I understand the injection of serpent and of stinging insects. The tooth or the sting is hollow almost to the point, which is entire.

In wounds from fish, whether from the thorn on the tail of the sting-ray, called also "stingaree," the thorn of a catfish, or the prickly spines of the perch, it is the slimy covering of the spine which acts as any foreign matter under our skins will act; even as a sliver of wood will fester under the skin, so will fish slime fester and act as a poison, but the poison from the wood flows out with the pus after the sliver is removed, but poison from fish slime lasts longer. It is not necessary to be wounded by a fish in order to be poisoned in the hand; a fresh cut made by any instrument is easily poisoned if fish slime gets in it. This sort of poisoning does not seem to be dangerous, but it is painful, and I never tried any remedy for it; just let it run its course and heal.

Capt. C. A. Moloney, C. M. G., in an article on West African Fisheries, one of the series published by the International Fisheries Exhibition in London in 1883, says: "Rays—like to the *Aetobatis* (eagle ray)—known in France as *Tantray*, are plentiful. * * * Natives are much afraid of the attacks of this fish, as the caudal spine has been found to be poisonous, and has inflicted

FLORIDA SEA DEVIL.



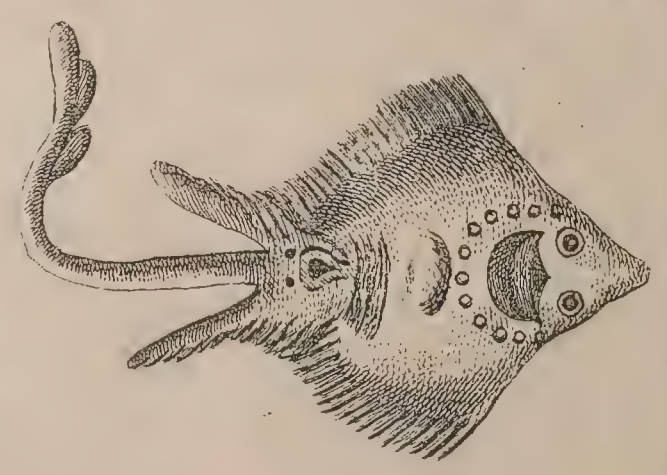
wounds which have proved fatal. Such wounds can be, it is said, successfully treated, when handled in time, by the natives, who use for the purpose the powdered caudal spine of like fish, mixed with certain leaves and herbs.

"I have with me the caudal spine of a small sting-ray which was removed from the side of a fisherman at Quittah, Gold Coast. Six hours later the man was seen by one of the Colonial surgeons, when the wound presented a very discolored, unhealthy appearance. The man died six days later from empyema, caused by the wound."

Writing of the poison organs of certain fish, Dr. Günther has said of the sting-rays: "Although they lack a special organ secreting poison, or a canal in or on the spine by which venomous fluid is conducted, the symptoms caused by a wound from the spine of a sting-ray are such as cannot be accounted for merely by the mechanical laceration, the pain being intense, and the subsequent inflammation and swelling of the wounded part terminating not rarely in gangrene."

Here is a field for pathologists or toxicologists to work in. The subject has interested me from boyhood, when I had a thumb ripped open while taking a bullhead, alias catfish, from a hook, and mother poulticed that painful thumb for a week before the pain ceased and the wound began to heal; but that was a glorious week! I could not write nor use a slate pencil to figure out how many apples John would have left if he let William go into his orchard and eat until he was full, but with arm in sling, when in sight of mother, I could bait a hook, sling it out from the dock, and if another catfish tried to give me the slimy thorn his effort was wasted. The lesson was too recent to be lost.

Do sting-rays shed their thorns, stings, or whatever you may call 'em? Let me say right here that this is not a conundrum of which I hold the answer, for I know nothing of the subject, as I profess to do in the case of the antelope. I never heard the question raised until in carelessly running through my library I opened the second volume of "A History of British Fishes," by R. Hamilton, London, who, after quoting Yarrell on the serrated spine of the sting-ray, says: "Formerly this weapon was considered to be of a very formidable character, as it was thought to possess poisonous qualities; this, however, has been completely disproved. It appears to be deciduous at certain intervals (perhaps an-



SOUTHERN STING RAY.
From Fishery Industries.

nually), and to be replaced by another. These spines are sometimes used as a point to arrows and spears, for which they are well fitted."

I prefer to let this question of the shedding of spines go to those who have had better opportunities for observation of the sting-ray, my own views are from dissection merely, and may be incorrect. Here is a chance for my old friend Prof. C. F. Holder to investigate, between his captures of monstrous tunas, and no doubt he will be glad of the hint. We were together in the old New York Aquarium some twenty odd years ago, and then he was fond of problems. The Pacific Coast has many skates and rays, stingers among the lot, which, if not specifically identical with the Atlantic species, probably would not differ in the matter of shedding spines.

The Skate as Food.

The skate is good to eat, but being unfamiliar food is thrown away by the ton. The reason is that our forefathers found such a wealth of sea food that they would not eat certain species, and this in their descendants became prejudice. I have eaten skate in Europe, where it is a common fish in the markets, and called it good. Of course it does not equal salmon, shad, whitefish, trout, bluefish, pompano, striped bass and other first-class fishes, but it is good; as good as many salt-water fishes that are sold in our markets and superior to most fresh-water fish. This is of course only

THE SKATE.
From Brookes' Fishes.

the judgment of one man's palate, who would prefer a few pounds of skate to a ton of carp.

I have also eaten skate in America, and found it good. Only the great pectoral fins are eaten, and these have long, bony rays extending across them, which are easily managed. They are fried or broiled, as I have eaten them, but perhaps may be cooked in other ways.

New York city has, in the tenement districts, at least 300,000 people who would be glad to buy skates at 2 cents per pound, if fresh and wholesome and brought to their doors. From Cape May to Cape Cod there are at least 500 pound nets which catch and waste on an average throughout the year over 50lbs. of skate per day, which at 1 cent a pound delivered in New York would foot up to $250 per day, and the push-cart man could get rich selling them at 2 cents per pound, and the poor would rejoice. Fresh cod have been sold in New York, at wholesale, as low as a cent a pound on

extraordinary occasions, and there has been such a glut of mackerel that 5 cents would buy a wheelbarrow load at the smacks, and then the push-cart man made a harvest and the poor were gladdened. Such gluts do not occur often, and are only cited to show what might be done with an edible fish which is now a curse to the fishermen if the poor could only have it brought to their doors, for they do not go to market, but depend on the push-cart man, whose meat, fish and vegetables have often been discarded from the stalls in wealthier localities.

Looking back on the list of our five Atlantic skates, I am prompted to quote the following from "Fisheries Industries of the United States": "They are all troublesome to the fisherman, clogging his lines and pound nets; but none of them are of the slightest economical value except the so-called barn-door skate, *Raia lævis*, which is occasionally salted for use by the fishermen of Portsmouth, N. H., and which has, within the last two or three years (printed in 1884) attracted some notice in New York. Miss Corson, in her cooking school, has called attention to its excellent qualities as a food fish, and skates may be found on the bills of fare at certain restaurants, such as Moquin's on Fulton street. Only the 'wings,' or the fleshy flaps to the pectoral fins, are used."

In the "Angler's Note Book," published by William Satchell & Co., London, 1880, a periodical that, like the "good," died young, I find the following on page 9: "The peasantry of Western Ireland will not eat skate, however plentiful that fish may be and however famished themselves are. It has been suggested that this superstition, for such it may be deemed, arises from the resemblance which the fish, with its depending rays, bears to the human face, and possibly to medieval representations of the Virgin Mary. Is the repugnance to be otherwise accounted for?"

This incites the remark that in confinement the skate presents a beautiful flying mode of progress, using its great pectoral wings in the slow, loggy manner of the blue heron, or measured rhythm of a bird of prey, and it will shoot up the glass side of the tank and present a semi-human face, which is comical; its lower nostrils simulating eyes, while its gill slits resemble whiskers of the Horace Greeley style. This line of thought leads me to speak of

The Skate as a Mermaid.

There are persons who do not believe that there are mermaids, but I know positively that there are such things, and I have seen them. About sea serpents I am open to conviction; there mought be sea serpents, and ag'in there moughtent. Not having seen one of their skeletons, hides, hoofs, nor toe nails, I can't affirm

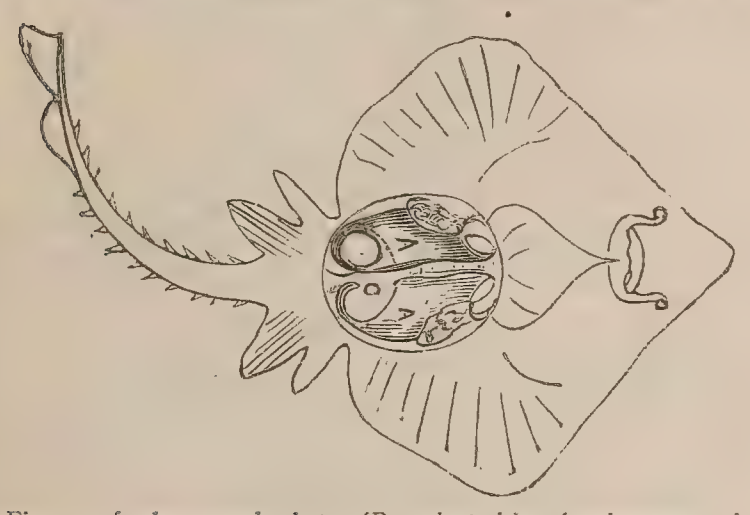


Figure of clear-nosed skate (*R. eglanteria*), showing eggs in position in the oviducts, a. a., eggs; b. b., ovaries with immature eggs; c., junction of the ovi ducts.

nor deny their existence. But mermaids! How can I refuse to believe in them when I have made dozens of them?

Look at that figure of a barn-door skate. It is a dorsal view, but cut out the tail far up, leaving the two "claspers" for legs, take all the flesh possible, turn back the pectorals, draw out the mouth and tie a cord temporarily about the head to make a neck, and there you are.

I made an elaborate "mermaid" from a skate in 1880, trimmed it with skirts from the pectoral fins, and took it to the Berlin Fischerei Ausstellung, and sold it for $50 to a German scientist, who was fully aware what the thing was made from. I took it over as a bit of fun, with no intention to deceive, nor desire to sell, but an offer of 200 marks, in good faith, left the "mermaid" in Germany.

That my monstrosity pleased a German scientist, who had never seen such a perversion of nature's handiwork, was amusing to me, as this form of mermaid is quite common; but I failed for a long time to recognize a picture of it by Brookes, which he called the "sea eagle." In 1763 there was published "The Natural History of Fishes and Serpents, Including Sea Turtles, Crustaceans and Shell Fishes, with their Medicinal Uses. By R. Brookes, M.D., author of the 'General Practice of Physic.' London, printed for J. Newbery at the Bible and Sun, in St. Paul's Churchyard."

I picked up Vol. III. of this quaint old work, and among other things found the cut of the sea eagle, with the following description, under the head of "Cartilaginous Flatfish": "The sea eagle has a head almost like that of a toad, and the eyes are large, round and prominent. The sides are expanded like wings, and the tail is long and slender, being sometimes above two ells in length. It is armed with a long, sharp weapon, and the body in bigness exceeds a fire-flaire (sting-ray?), and the weapon is not less dangerous than that of the fire-flaire, being greatly dreaded by fishermen. The mouth is full of teeth, and the skin is soft and smooth; the upper part being livid and the under white. They are generally taken very small, but some have been found to weigh 300lbs. It may be distinguished from other cartilaginous fish by the length of its tail and by its large weapon or spine, which is sometimes single and sometimes double, but always venomous. It is an inhabitant of the Mediterranean Sea, and is often brought to Rome and Naples. The flesh is smooth and moist, with a rank nauseous smell, and therefore is seldom or never eaten."

Verily, there is nothing new under the sun! After puzzling over what I thought to be a bit of imagination in the production of the "sea eagle," I came into possession of Ogilby's "America," published early in the seventeenth century, and there was a figure which made a connecting link between my mermaids and the "sea eagle." But Dr. Brookes put a clown's hat on his aquatic bird, placed feathers in its wings and worked out its tail with a scroll saw; Ogilby made his monster fly over the water! This shows how writers of a century or two ago used to copy from each other without credit. I can't find my copy of Ogilby; it is in storage, but it would be interesting to know how far back this fraud has been practiced.

Skins of the Rays.

Simmonds, "The Commercial Products of the Sea," London, 1879, says: "The quantity of ray skins, dried or salted, imported into France in 1863 was about 18,-000lbs. weight, principally from Portugal. Formerly they used to fetch as high as seven francs the pound; now they may be had for 1s. a pound.

"The best galuchat, or what we should call shagreen, is made from the skin of the sephen (a sting-ray, *Hypolophus sephen* of the Arabian coast.—F. M.), which abounds in the Mediterranean Sea. * * * This skin is remarkable for the size of its osseus protuberances. * * *"

These skins are used by workers in wood and ivory for rubbing down and polishing their work, and are preferred to either sand or emery paper. They are also utilized in covering sword hilts, cases of mathematical instruments and other objects where a hard surface is desired, and also for ornament on jewel cases. When ornament is desired the tubercles are rubbed down until they show a pearly interior, which contrasts beautifully with the several dyes that are first applied to the skin.

An intermediate species between the rays and the sharks is the hideous animal called in derision "angel fish," a name that scientists have perpetuated in *Squatina angelus*—the squat angel! But from the skin of this beast are made the most beautiful sea-green coverings for jewel boxes and other articles of vertu.

All this food, and the by-products of the rays, are wasted with us, the matter is considered to be too trifling; but we import the prepared and manufactured skins of skates and waste tons of good food daily because the day has not come when we must make the most of what nature has bountifully provided. The day is coming, and there is a fortune for the man who takes hold of the great waste of our fishes and saves it. All the skates are not wasted. Those taken by the menhaden steamers are turned into "scrap," mixed with the phosphate rock from the Carolinas, and come back to us in vegetation of some kind, but this is not the way to get the most out of these fishes. As a fertilizer, a 10lb. skate may be worth a small fraction of a cent. Under intelligent handling, the tons of skates which are daily caught from Cape May to Cape Cod should yield a large revenue to the fishermen and to others who handle them.

"What's that? why don't I go into it?" Bless you, the work needs a man to go out among the fishermen night and day, and to have enough pennies in his sock to live while the business was working up. I have neither youth nor pennies, and am content to say that when we Americans come to the point where we will utilize all of nature's gifts, we will then take our place in the front rank of all nations, for we have both the material and the ingenuity to make use of it. Among our neglected material for economic use is the skate, and its relatives, the rays.

The illustration of what Mr. Mather calls a mermaid is from a photograph sent to the FOREST AND STREAM by Dr. ames A. Henshall, author of the "Book of the Black Bass." The photograph is by Woodward, of Titusville, Fla., who has devised this legend for the back of the card: "This wonderful curiosity was taken at Matanzas Inlet, Florida, by a party of gentlemen fishing in October, 1893, and has been pronounced by eminent doctors and naturalists to be a connecting link between the fish and the bird. Webster describes it as the sea devil, in part. The American Encyclopædia and History makes no mention of anything of its kind."

Fishing at Anglesea, N. J.

No place along the Jersey coast can offer as many inducements, and no place is less frequented by New Yorkers, than Anglesea, N. J. This little fishing village is situated at the outlet of Hereford Inlet, and at the eastern end of Five-Mile Beach, which is famous for beautiful Holly Beach and Wildwood. Probably the many changes one has to make to reach Anglesea from New York have something to do with its obscurity—ferry to Jersey, train to Haddon Avenue Station, Camden, South Jersey train to Cape May Court House, where one is liable to wait an hour for the old "Mud-hen," which is made up of a rickety freight engine and a superannuated smoking car. This is the worst part of the journey. Mosquitoes and green-head flies infest the marshes in swarms; and owing to the slow pace of the train the insects have full play. I doubt if Alaska, in all the glory of her short summer, can give points to the marsh on mosquito breeding.

At the end of the journey one is well repaid for all hardships of the trip. As you stand on the station platform the outlook is picturesque, to stay the least. Seven-Mile Beach boldly throws out a sandy arm into the swift out-rushing current of Hereford Inlet, while Five-Mile Beach gives away, seemingly, after a useless struggle, and extends out to sea at right angles to its sister points. The great lighthouse looms up boldly near the point as a comrade of the life-saving station, the two together bearing mute testimony of the power of the old ocean. The fresh salty breeze bears to our ears the minor protest of the bell-buoy. Such a situation is entrancing; we linger on the platform for some minutes after the "Mud-hen" has puffed herself away into the gathering dusk.

Anglesea boasts of three hotels—Schirmer's and the Hereford for fishermen, and the Anglesea Hotel for the more fastidious. Several small fishing sloops make daily trips to the fishing banks, and on favorable days those who make the trip at a dollar a head are loaded down with sea bass, croakers and bluefish. In the inlet the still-water fishing is equally as good, and any of the numerous captains can place you on a fishing ground which would be productive of fine sport. Weakfish, hake (kingfish?) and sea bass are exceedingly plentiful. Off the front beach black and red drum are caught in certain seasons. Aside from the wealth of fish, very fair rail and snipe shooting is to be had in the early spring. In summing up the resources of Anglesea I will recommend it to any sportsman in search of a good outing—providing he can stand the onslaught of myriads of mosquitoes and green-heads, which take possession when the wind is off shore.

FIELD TRIALS.

1899.

Jan. 16.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y.

Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

Continental Field Trials.

THE field trials of the Continental Field Trial Club, run at Lexington, N. C., commencing Dec. 5 and ending on Saturday of that week, were a success in every particular. The stakes were well filled, according to the support given in latter days, birds were abundant, the grounds as a whole were good, horses and wagons were quite sufficient for the purposes required, and last, but no least, a more congenial gathering of sportsmen never assembled at a field trial. The president of the club, Mr. Hobart Ames, of North Easton, Mass., was present from start to finish; Mr. Chas. A. Keyes, of East Peperell, Mass., famous in the dog world as a terrier breeder, enjoyed the trials greatly; Mr. Frank Fleer, of Philadelphia, was present a part of the time, and Dr. J. S. Brown, of Montclair, N. J., was present on Monday. There were also present Messrs. Edm. H. Osthaus, Toledo, O.; Irving Hoagland, New Brunswick, N. J.; W. B. Meares, Hillsboro, N. C.; J. H. Ogden, J. L. Wolfenden and Dr. R. H. Harte, Philadelphia; R. V. Fox, Harrisburg; Theodore Sturges, Edward C. Hoyt, J. B. Baker and Arthur Stern, New York; Theodore R. Hoyt, Boston; F. H. Beall, Linwood, N. C.; Major J. M. Taylor, Rutherford, N. J.; C. W. Buttles, Columbus, O.; Capt. C. E. McMurdo, Charlottesville, Va.; Mr. S. C. Bradley and daughter, Miss E. B. Bradley, Greenfield Hill, Conn.; Leon E. Gray, Salisbury, N. C., and many gentlemen of local domicile whose names I did not learn.

There were present many well-known handlers, namely, C. E. Buckle, S. C. Bradley, D. E. Rose, Victor Humphrey, John White, C. Tucker, W. H. Hammond, W. J. Giles; and R. Storey and J. Armstrong—Messrs. Brokaw's and Gould's trainers respectively, who are both training at High Point, N. C.—were present a day.

The judges in the Derby and All-Age stakes were Messrs. W. B. Meares, Hillsboro, N. C.; Edm. H. Osthaus, Toledo, O.; and Irving Hoagland, New Brunswick, N. J. In the Free For All Mr. Theo. Sturges acted in place of Mr. Osthaus, who ran Ripsey in that stake. They were diligent and attentive from start to finsh, and their awards in the majority of instances were heartily indorsed. They were handicapped in conducting the running by not having a knowledge of the grounds, so that there were delays between the heats in consequence, though none of the delays were of important length. The grounds are excellent as a whole for field trial purposes, though a part is rather heavily grown up to pine thickets.

Mr. W. F. Thomason, of Lexington, who acted as guide to the Central Field Trial Club judges through many years, was the guide this year.

The headquarters were at the March House, but not the March House famous in the gatherings of the Central Club. The old March House was burned. Mrs. March, the gentle, matronly landlady, passed away before that event, and Mr. March, who loved apple-jack unwisely, passed away soon afterward. The new March House is unlike the old rambling homelike structure, with its rooms opening on balconies, and halls opening on nowhere, in every respect. Instead of search party for the descendant of a Senegambian king to build a fire, one now presses an electric button, and the colored boy instantly comes a-running up the stairs and through the hall with a thunder of shoe leather not unlike the noise of a runaway horse on a bridge.

But it was very comfortable, and Mr. Springs, the landlord, did his best to make every one comfortable.

The grounds contained an abundance of birds. A large part of them were the same used by the Central, and were associated with the victories of Rowdy Rod, Harry C., Sam C., Rip Rap, King's Mark, Chance, Roger, Lebanon, Duke of Hessen, Pontiac, Prince Lucifer, Simonides, Antonio, King of Kent, Wun Lung, Hope's Mark, Bob Cooper, Promotion, Paul Bo, Orlando, Count Gladstone, Maid of Kent, and a host of others, most of which have taken the plunge into eternal darkness.

The club held a meeting on the evening of Dec. 9. It was decided that four stakes will be run next year, namely, a Derby, open to all setter and pointer puppies whelped on or after Jan. 1, 1898. First forfeit $10, due Aug. 1; second forfeit $10, due Oct. 1; $10 additional to start. Entries close Aug. 1. Purse $500; to first, $250; second, $150; third, $100.

All-Age Stake, open to all setters and pointers which have not won first in any all-age stake of previous seasons in any recognized field trial. Entries close on Oct. 15, with $10 forfeit, $20 additional to start. Purse the same in amount and its division as in the Derby.

A sweepstake, open to all setters and pointers, regardless of prior winnings; starting fee, $25; entries close the night before the race; first heat, one and one-half hours; 60 per cent. to first, 40 per cent. to second, third dog saves his stake.

A Members' Stake, $10 sweep; open also to the members of the E. F. T. Club; each member must own the dog which he starts, or be a member of the kennel firm which owns him.

Officers were elected as follows: President, Hobart Ames, North Easton, Mass.; Vice-Presidents, Edward Dexter, Boston, Mass., and Edmund H. Osthaus, Toledo, O.; Governors, Hobart Ames, J. B. Baker, New York; Dr. J. S. Brown, Montclair, N. J.; Edward Dexter, Boston,; H. K. Devereaux, Cleveland, O.; C. H. Phelps, Jr., New York; C. A. Draper, Toledo; P. Lorillard, Jr., Tuxedo, N. J.; W. B. Meares, Hillsboro, N. C.; Edm. H. Osthaus, Toledo; Theo. Sturges, New York.

The names of new members elected are Theo. B. Hoyt, Boston; Chas. W. Keyes, Dr. C. B. Russell, Keene, N. H.; A. Stern, J. B. Baker, Geo. Crocker and Edw. C. Hoyt, New York; Irving Hoagland, New Brunswick; W. Hoyt, Lexington, N. C.

All the indebtedness of past and present trials was settled, and the club now has a bright prospect for its future success.

A meeting will be held at the New York bench show in February.

The Derby.

The competition was exceedingly weak, and indeed much of it was of such inferior quality that it was not competition at all. The judging was a difficult task, consequent to the flatness and weakness of the competition. There was so little of a class character that the data for a decision were very meager.

Colonel R. came nearest to a class performer, though his point work was marred by a lack of stanchness and finish. He was fast, ranged wide and with fair judgment, and he was quick and accurate in his bird work so far as locating is concerned, but he made errors of judgment in his point work. He, however, was not a willful offender. He also marred his work somewhat by fiddling with little birds. He showed good quality, and if he trains on will make a good performer. However, had the competition been ordinarily strong he would need to be content with a humbler place than first.

Lad of Jingo, second, owed his position to his skill on birds. He relatively found and pointed well, though his range was moderate and his speed varied from ordinary to slow. His win was due largely to the weakness of the competition.

Count Danstone, third, was not running in good form. He beat out his ground with poor judgment. He was faster and a wider ranger than Young Jingo, but his bird work was so weak that it placed him in third place.

All the others were either so disobedient or so mediocre in the quality of their work that there is nothing specially noteworthy to mention in respect to merit.

P. Lorillard, Jr.'s, b., w. and t. setter dog Pink's Boy (Gleam's Pink—Belle of Pawling), C. Tucker, handler, with Charlottesville Field Trial Kennels' b. and w. ticked pointer bitch Ranee (Rip Rap—Toxic), C. E. Buckle, handler.

H. R. Hitchcock's b., w. and t. setter dog Colonel R. (Harwick—Trap, Jr.), Geo. E. Gray, handler, with D. E. Rose (agt.), b., w. and t. setter bitch Lena B. (Tony Boy—Nellie C.), agent, handler.

Mrs. R. P. Carroll's b., w. and t. setter dog Halbard (Count Gladstone IV.—Iza), John White, handler, with Fox & Blythe's lem. and w. setter bitch Rita's Flounce (Antonio—Rita H.), R. V. Fox, handler.

Mrs. R. P. Carroll's b., w. and t. setter dog Tabard (Count Gladstone IV.—Iza), John White, handler, with Jackson-Denmark Kennels' b., w. and t. setter bitch Marie Girard (Count Gladstone IV.—Lillian Russell), Geo. E. Gray, handler.

Fox & Blythe's b., w. and t. setter bitch Nightingale (Antonio—Rita H.), R. V. Fox, handler, with Charlottesville Field Trial Kennels' liv. and w. pointer bitch Nana (Rip Rap—Toxic), C. E. Buckle, handler.

J. P. Greene's b., w. and t. setter dog Count Danstone (Count Gladstone IV.—Dan's Lady), Geo. E. Gray, handler, with W. P. Austin's liv. and w. pointer dog Lad of Jingo (Jingo—Dot's Pearl), D. E. Rose, handler.

H. K. Devereaux's o. and w. setter dog Young Sport (Marie's Sport—Nellie Bly), Geo. E. Gray, handler, with Hobart Ames' b., w. and t. setter dog Dewey (Tony Boy—Nellie C.), D. E. Rose, handler.

Miss Constance Parson's b., w. and t. setter dog Berber (Antonio—Laski), John White, handler, with Pierre Lorillard, Jr.'s, b., w. and t. setter dog Jean de Reszke (Gleam's Pink—Dell V.), C. Tucker, handler.

This stake was open to all setters and pointers whelped on or after Jan. 1, 1897. First forfeit, due Aug. 1, $10; second forfeit, due Oct. 1, $10; $10 additional to start. First, $250; second, $150; third, $100.

Monday, Dec. 5.

The weather was clear. A stiff, cold wind blew in the morning hours. The sun shone clear and bright. As the sun rose higher the frozen crust of the mud thawed, and the footing was soft and heavy throughout the day. Birds were found in ample numbers. Considering the poor searching abilities of the dogs, a remarkable number of bevies was found.

The class of work was decidedly inferior. No dog made a well-sustained performance. Those taken into the second series, in most instances, merited the honor, not particularly because they had performed well, but because others had performed worse.

First Round.

Pink's Boy and Ranee were cast off at 8:30. A cold, raw wind was blowing. Pink's Boy pointed a bevy, and Ranee backed. They were steady to shot. Sent on. Next Ranee passed close by a bevy in sedge, which it seemed quite possible for her to point. Next she flushed a single. Several opportunities to point were lost, the birds being flushed by the handlers. Searching for another bevy, Ranee pointed on the trail, then roaded on and lost it. The bevy was afterward flushed by her handler. The bird work as a whole was poor. Both ranged fairly well and had a merry way of going. Up at 9:21.

Colonel R. and Lena B. started at 9:34. Colonel flushed a bevy. On the scattered birds he made four good points; Lena made two. Next Colonel pointed a single in weeds, and Lena going down wind flushed it. Next Colonel pointed a single in open weeds; he chased it a few yards, when it flushed, but stopped to order. He next made two points to which nothing was found. Lena backed reliably. Colonel was much the wider ranger, and more dashing in speed and style. Lena had moderate range and speed. Up at 10:22.

Halbard and Rita's Flounce were cast off at 10:34. Halbard covered a very limited area, and his speed was moderate. He pointed a bevy, coming on it more by good luck than by good searching. On the scattered birds he pointed one, and Rita backed unsteadily. Next Halbard pointed a rabbit. Up at 11:10. Rita ranged with little judgment, and covered but a moderate area of ground. The heat as a whole was a poor one.

Talbard and Marie Girard began at 11:21. Marie flushed a bevy in weeds. Two more bevies flushed close by afterward. One was followed into the woods. Talbard pointed a single, and Marie backed poorly. The heat was inferior in every respect. Up at 12:05.

Nightingale and Nana started at 1:23, after lunch. Two bevies were flushed soon after the dogs started, each dog being suspiciously close, and presumably each had a bevy flush on the demerit side of the account. Next Nana roaded sharply to a flush on a single bird in sedge. Sent on. Both roaded riotously on a trail in corn. Nightingale pointed the bevy, and Nana came racing in toward her. Both broke in and flushed the bevy. Next Nightingale pointed a single of the scattered birds in pine woods, and Nana flushed twice. Sent on. Nana pointed a bevy at the edge of woods. Up at 1:58. Both were quick, sharp workers, but rather lawless, showing lack of perfect training. Nightingale had the better of the heat.

Count Danstone and Lad of Jingo were started at 2:03. Soon after starting, Lad pointed and Count backed; nothing found. Lad pointed a bevy in corn and Count backed. Lad was a bit unsteady to shot. Next Count pointed at the same time that a single flushed. Still in corn, Lad pointed some scattered birds. Dan pointed footscent. Lad next pointed a single in corn, moved on and several more flushed. Next he pointed a single bird. Sent on. Lad pointed, then roaded to a point on the bevy. Up at 2:40. Count was not showing the form he displayed at Newton. His range was narrower, and he was not exercising his best judgment. Jingo showed some good work on birds. His range was from middling to narrow in its scope, and his judgment was not exercised at its best.

Young Sport and Dewey started at 2:48. Sport pointed a bevy and Dewey jumped in to a stanch back. Both were steady to shot. On the scattered birds Dewey made two points and two flushes; Sport, two points. In open weeds a bevy flushed close in front of them. Sport had moderate range and speed. Neither one used good judgment in beating out his ground. The heat as a whole was but moderately fair. Up at 3:27.

Berber and Jean de Reszke were cast off at 3:41. Each made a point to which nothing was found. Jean flushed a bevy in a cornfield. A short search was made for the scattered birds without finding any of them. In a cornfield Jean stopped, and was just steadying to a point when the bevy flushed. Up at 4:30. Both had good speed and fair range, but were lacking in judgment in beating out their ground. The bird work was very meager and awkwardly done considering the opportunities.

This heat ended the day's competition.

Tuesday, Dec. 6.

The morning was clear and frosty. A gentle breeze blew betimes during the day. When the early morning was past, the frost melted away; mud took the place of the frozen crust, and the weather became warm and pleasant. Birds were found in sufficient numbers. The work was markedly devoid of any commendable class work.

Second Round.

Six dogs were retained in the competition. They were run in manner as follows:

Lad of Jingo and Nightingale were cast off at 8:36. In pines Nightingale flushed a bevy. Sent on. Next Nightingale and her handler, near together, flushed a bevy. Lad pointed, apparently on footscent. Nothing found. Nightingale pointed a single in pine woods and was steady to shot. The heat was a poor one. Nightingale showed speed, dash and range, but her point work was poor. She also showed insufficient training. Lad was slow, pottered at times, but was steady and reliable in his work to the gun. Up at 9:27.

Count Danstone and Tabard were cast off at 9:41. Count pointed a bevy in the open, and Tabard ran into a good back or point. On the scattered birds in woods Count made a good point on a single and was well backed. Next Count dropped to a point, probably on footscent; nothing found. At the same time Tabard roaded and several singles flushed. Up at 10:18. Tabard was hard to handle, particularly on singles, and his judgment in ranging was poor.

Col. R. and Pink's Boy were cast off at 10:30. Colonel flushed a bevy in open sedge, and stopped steady to order. Next he made a point in woods; nothing found. Boy in the meantime was lost. Sent on, he next found and pointed a bevy, and afterward made a good point on a single. Boy was very disobedient. Both were fast. Colonel was the better ranger. Up at 11:12.

Final.

The judges announced that Colonel R. and Lad of Jingo would be run after lunch. They were started at 12:55. Lady flushed a single bird in sedge. Colonel pointed a bevy in corn. He was exceedingly fortunate in having it stay to his point, as he was very close in on it. Up at 1:26. Colonel was far the faster and better ranger. Lad was a narrow ranger, but he was obedient relatively, and worked fairly well to the gun. This heat ended the stake.

The judges announced the winners as follows: First, Colonel R.; second, Lad of Jingo; third, Count Danstone.

Tabard was difficult to handle, and on scattered birds in woods worked as pleased himself. His range was narrow, he worked the same ground over repeatedly, and came in behind his handler. There was no judgment in his work. Up at 10:18.

Colonel R. and Pink's Boy were started at 10:30. Colonel began the bird work by flushing a bevy in the open, and was steady to order. Next, in pine woods, Colonel pointed; nothing was found. In the meantime Pink's Boy was lost for a while.

The All-Age Stake.

The All-Age Stake was begun immediately after the conclusion of the Derby. There were thirteen starters, which were run in the following order:

W. W. Titus' b., w. and t. setter dog Joe Cummings (Antonio—Piccaola), Victor Humphreys, handler, with J. P. Green's liv. and w. pointer dog Young Jingo (Jingo—Pearl's Dot), Geo. E. Gray, handler.

Leon Ernest Seay's liv. and w. setter dog Dick (Dick Noble—Donna), owner, handler, with J. B. Bisbee's b. and w. ticked pointer dog Ripstone (Rip Rap—Pearl's Dot), W. H. Hammond, handler.

Edwards & Devereaux's b., w. and t. setter dog Uncle B. (Harwick—Dan's Lady), Geo. E. Gray, handler, with Tyro Kennels' liv. and w. pointer dog St. Clair (Rob—Ripsey), W. J. Giles, handler.

Charlottesville Field Trial Kennels' b. b. setter bitch Pin Money (Count Gladstone—Daisy Croft), C. E. Buckle, handler, with Fox & Blythe's setter dog Dave Earl (Count Gladstone—Dan's Lady), R. V. Fox, handler.

Del Monte Kennels' o. and w. setter bitch Minnie's Girl (Antonio—Minnie T.), S. C. Bradley, handler, with D. E. Rose, (agt.) b., w. and t. setter bitch Pearl R. (Sam Gross—Donna Inez).

W. Gould Brokaw's liv. and w. setter bitch Forest Belle (Edgemark—Bell), W. H. Hammond, handler, with D. E. Rose (agt.) b., w. and t. setter dog Sport McAllister (Tony Boy—Blue), D. E. Rose, handler.

Del Monte Kennels' b., w. and t. setter dog Sam T. (Luke Roy—Betty B.), a bye, S. C. Bradley, handler.

This stake was open to all setters and pointers which had not won first in any all-age stake at any recognized field trial. Entries closed on Oct. 15, with $10 forfeit; $10 additional to start. Prizes, first, $250; second, $150; third, $100.

Joe Cummings, the winner of first, ran a well sustained race throughout. He showed excellent judgment in seeking his birds, and in locating and pointing them. His range was wide, and his speed was fast and well sustained. He was easily the best competitor in this stake.

Pin Money, winner of second, did not make a well-sustained competition, though parts of it were excellent. She ranged fast and wide, covered a great deal of ground, but seemed to be frolicking rather than hunting at times.

Young Jingo, third, ran quite a good race throughout, and I preferred his work to that of second. He is a bit weak in finding ability, though he ranges fairly well and uses good judgment. He is very strong in work on scattered birds.

First Round.

Joe Cummings and Young Jingo were cast off at 1:38. Jingo stopped and was moving cautiously when he flushed a single bird in sedge. Both dogs were ranging with good judgment, very fast and wide, Joe going the wider. Joe made a good point on a bevy in sedge, and Jingo backed him well. Jingo next made two good points on singles and Joe backed the last one or pointed the birds. Sent on, both again hunted well for bevies. Joe wheeled prettily to a point on a bevy in sedge beside a ditch. On the scattered birds Joe made a point, presumably on foot scent, after he pointed a single, and Jingo close by pointed or backed. Jingo next pointed a single, and Joe pointed or backed. Next Jingo pointed some scattered birds, after which Joe pointed foot scent. The birds ran a great deal. Their work was sharp and accurate, with the heat in favor of Joe. Up at 2:22.

Dick Noble and Ripstone began at 2:27, and ran till 2:58. The heat was inferior, neither dog ranging wide nor fast, and the pointing and finding were very ordinary. Ripstone made three flushes on scattered birds, and two points on singles. Dick pointed a single bird and made an uncertain point on a bevy.

Uncle B. and St. Clair started at 3:04. Within a few yards of starting in corn Uncle pointed a bevy. Sent on. Next St. Clair pointed a bevy in corn. At the same time, Uncle in another part of the same cornfield pointed a bevy. Near the railroad, Clair flushed a bevy. Next, in woods, he pointed a bevy. Uncle pointed a single in woods. Next he made a point in high weeds; nothing found. Up at 3:50. The ranging was middling.

Pin Money and Dave Earl were cast off at 4:24. Soon after starting Dave was lost. After about twenty minutes' search he was found pointing a bevy within fair limits of the course. Pin was held up in the meantime. They were brought together and sent on again. Pin pointed a sparrow. Next Pin was lost, and Dave was held up while a search was made for her. Soon after she was found the heat ended. Time, 5:20. Pin Money was going very fast and wide, but was not paying proper attention with her nose. She seemed to be frolicking more than searching. The heat was very unsatisfactory.

This heat ended the day's work.

Wednesday, Dec. 7.

The day was clear, bright and pleasant; there was a gentle breeze at times, with a slight chill in it, but on the whole it was a first rate day for field work. An early start was contemplated, and the judges and reporters were on the grounds in good season. Unfortunately some of the wagons, which left town a few minutes late, took the wrong road near the grounds selected for the start, and a long delay was caused thereby. Birds were found in plentiful numbers.

Pin Money and Dave Earl resumed their unfinished heat of the previous evening. They were cast off at 9:40. Pin pointed a bevy in sedge and was steady to shot. Dave

was not near to back. Moved on and soon Dave bolted. He was gone quite a while. One of the spectators saw him crossing a cotton patch entirely out of bounds. He disappeared near the end of some woods close by, and shortly afterward was found there pointing a bevy. Pin was held up in the meantime. Soon afterward they were ordered up. Pin Money ran with great speed and ranged wide, but she noticed small birds more than was becoming, and was a bit frivolous at times. Dave worked well to the gun part of the time, and part of the time he did not.

Minnie's Girl and Pearl R. commenced at 10:21. Girl was lost in woods soon after starting. When found, the dogs were brought together, and were cast off in the open. In open grass both made game. Pearl passed close by the bevy; Minnie roading about, pointed it accurately; Pearl backed; both were steady to shot. Sent on. Pearl pointed a bevy in open sedge; Minnie brought up to back, passed to one side about 15yds. and flushed the bevy. The birds were followed. Pearl pointed, probably on footscent; Minnie at the same time pointed on plowed ground about 40yds. ahead; the birds were flushed close by by the horsemen. Next Minnie pointed in sedge; probably the birds were running; Minnie roaded on and steadied to point; her handler thought that she had not quite located, urged her on and the birds flushed. Next both pointed in sedge; nothing was found. Up at 11:05. Pearl pointed frequently on footscent, and was not skillful in accurate locating, though she pointed stanchly. She worked merrily, had a medium range, conducted with moderate judgment. Minnie was hard to handle, and at times worked out of bounds.

Forest Belle and Sport McAlister were cast off at 11:22. Sport made a good point on a bevy in sedge by a run. Sent on. Next Sport pointed a bevy and Belle pointed a single in woods. The dogs were separated in working for the scattered birds in corn. Sport pointed two birds in cover; at the same time, Belle, in another part of the field, pointed and nothing was found. The heat was a poor one. The dogs were separated much of the time, and it was for them difficult to follow a fixed course. Belle worked industriously, had good speed and range, but it was difficult to keep her to the course, and her bird work was meager. Sport kept to the course, but was lacking in dash, and his range was but middling. Up at 12:00.

Sam T. was started at 12:04, and ran thirty-six minutes. In the heat he found and pointed three bevies, and made a point and a flush on scattered birds. He was fast and ranged well, but was over cautious on game. This ended the competition of the first round.

Second Round.

Six dogs were retained in the running; some of them had made an excellent showing, and some of them needed further trail. They competed as follows:

Pin Money and St. Clair began at 2:05, and ran thirty-five minutes. Clair pointed a bevy in weeds; Pin pointed or backed; Clair held his point stanchly for a few moments, then sprang forward and flushed. On the scattered birds in sedge, Clair pointed twice, roading away from the birds each time, after his handler failed to flush; Pin made an indecisive point. Considering the number of opportunities, the point work was poor. Pin roaded slowly and pointed betimes on some running birds; Clair backed well; both were steady to shot. Pin made two points, to which nothing was found. Clair pointed a bevy by a plum thicket in the open, and was well backed by Pin. Up at 2:40. The heat did not run smoothly, it being difficult to keep the handlers to the course. Pin was fast, and covered much ground, but did not always point truly. Clair worked industriously, had middling range, and was more skillful on bevies than on singles.

Dave Earl and Uncle B. were cast off at 2:47. Dave pointed in corn, roaded on, abandoned the scent, and went on ranging; the horsemen flushed the bevy close by a few moments afterward. The dogs were separated. Dave was found pointing a bevy, and he flushed it willfully as his handler went to him. Uncle next pointed in sedge in corn, and Dave backed reluctantly to order; the dogs moved on and both pointed; nothing found. They were worked up a valley, then into woods on a large bevy of scattered birds. Uncle pointed a single, and next he stopped to a flush on a single, then crouched on a point on some remaining birds, and was steady. Both pointed and nothing was found. Up at 3:22. Neither showed accurate work on birds. Each had good speed. The heat was rather broken as to following a course.

Young Jingo and Sam T. started at 4:32. Sam pointed a bevy in corn; Jingo, brought in to back, pointed the same bevy; both were steady to shot. The birds were marked down in corn. Jingo flushed a single. Next he pointed the scattered birds. Sam made a point in sedge in corn; nothing found. Each made a good point on a single. This ended the day's work.

Thursday, Dec. 8.

The morning was clear, calm and frosty, with a raw coolness which made some little discomfort to many. The ground was frozen, and in the more shaded corners remained so during the day. Birds were found in ample numbers. The late forenoon and afternoon hours were warm and pleasant.

Third Round.

Four dogs were retained in the competition. Their doings were in the main as follows:

Joe Cummings and Sam T. began at 8:44. In open sedge, both made a point on the same bevy. Joe pointed a bevy in sedge and Sam backed nicely. Sam made two points to which nothing was found. He had speed, fairly good range, but was over-cautious on scent, and overstanch on point. Up at 9:25. Joe displayed good judgment in range; he covered a sufficient scope of ground, and his speed was quite up to requirements.

Pin Money and Young Jingo were started at 9:40. Jingo pointed a bevy and was steady to shot. The dogs were separated at the time. Pin Money pointed in open grass; nothing found. Up at 10:08. Jingo was the more earnest searcher. The character of the grounds and the short heat gave little data for comparison as to range and judgment. Both were speedy.

Final.

Joe Cummings and Pin Money were cast off at 10:08, and run a few moments merely to comply with the rules, which require that the winners of first and second shall run together.

The judges announced the winners as follows: First, Joe Cummings; second, Pin Money; third, Young Jingo.

The Free for All.

This stake was begun immediately after the All-Age Stake was concluded. The number of starters was an agreeable surprise, exceeding all expectations. The stake was open to all pointers and setters, regardless of previous winnings. Entries closed the night before the race; starting fee, $25. The heats in the first round were one and one-half hours' duration. The right to declare the stake off, in the event that less than six entries were made, was reserved. It was a sweepstake, third dog to save his stake; the remainder divided 60 and 40 per cent.

There were twelve starters, run in the following order:
Sport McAlister with Uncle B.
Colonel R. with Lady Mildred.
Young Jingo with Lena Belle.
Sam T. with Roland.
Dave Earl with Joe Cummings.
Pin Money with Ripsey.

The pedigrees, color, handlers, etc., are given in the reports of the other stakes, excepting three, namely, Hobart Ames' b., w. and t. setter bitch Lady Mildred, handled by owner; Pierre Lorillard, Jr.'s, b., w. and t. setter dog Roland, and b., w. and t. bitch Lena Belle, C. Tucker, handler.

Pin Money was easily the winner of first. She ran an excellent race, getting down to serious work and finding and pointing in an excellent manner. She displayed that she has sterling working ability when she works in earnest and remarkable endurance as well. Her long competition apparently did not affect her in the least.

Roland, winner of second, had a good working range, and was sound in his bird work, displaying excellent skill in locating when he once struck the trail. His competition was meritorious throughout.

Dave Earl, the winner of third, ran a fair race, but in my opinion far inferior to that of Lena Belle, the latter excelling in ranging and good work in finding. He is heady at times, and hard to handle.

The judges in this stake were Messrs. Meares, Hoagland and Sturges.

Birds were found in abundance. The competition as a whole was pleasingly good.

First Round.

Sport McAlister and Uncle B. were started at 10:38. Sport dropped to a point on a rabbit in woods. Thereafter till the end of the heat one or the other or both dogs were lost, excepting during a few unimportant minutes. The country was hilly and there was much more woods than open fields, but this in no wise excuses the long absence of the dogs. They were self-hunting, and most of the time the party was waiting till the dogs could be found.

Colonel R. and Lady Mildred were cast off at 1:14, after lunch. Lady flushed a bevy. The birds were followed. Colonel made a point in corn; nothing found; Lady pointed a single well, and was steady to shot. Colonel pointed a single in sedge, and Lady backed. Lady next made two points to which nothing was found; next both pointed and nothing was found. Sent on. Lady pointed a single in sedge in woods. Colonel soon thereafter pointed and roaded nicely after a running bevy in sedge in woods. He pointed several times, and at length it flushed wild ahead while he was roading. Sent on. Next he pointed a bevy on a side hill in woods; Lady backed; Gray failed to flush, and sent Colonel on; the horsemen flushed the bevy afterward. It was lying very close. The find and point were good. The birds were followed. Lady made a point to which nothing was found. Colonel, going down wind, flushed two birds. This ended the heat. Both were industrious, and ranged at good speed. Lady appeared to be somewhat off her nose. Colonel's work was an improvement on that of his previous competition in the Derby.

Lena Belle and Young Jingo were cast off at 2:56. Both standing close together, pointed a bevy by the edge of thick cover in a run; both were steady to shot. Jingo pointed a bevy in sedge; Lena backed. The scattered birds were marked down in sedge 20 to 30yds. in width, and were scattered along for 200yds. more or less. There was much roading and drawing. Jingo made three points on scattered birds; Lena made one; but afterward there was much roading, drawing, pointing and flushing and pressing forward of handlers and dogs, all close together, so that it was impossible to judge of what was work and what was error. It was for the moment a touch of the old-time scrambling. Sent on. Both dogs pointed a bevy. Jingo pointed one single and flushed another. Sent on. Jingo pointed a bevy in sedge in scattered pines. Lena made a point on two birds. Sent on. In the open field, Lena dropped to a point on a bevy, and Jingo backed; a very good piece of work. On the scattered birds in sedge, Jingo made three good points and one flush. Lena pointed, then moved on and the bird flushed ahead. Next she made a good point on a single. In finding and locating bevies, Lena was quite Jingo's superior, but he far surpassed her in work on singles. Both ranged fairly well at good speed.

The heat ended the competition for the day.

Friday, Dec. 9.

The weather was cloudy, and there was a raw coldness which penetrated to the marrow. A skimming of ice remained all day on such pools as were still and shaded, and the ground was frozen in most places throughout the day. Birds were found in ample numbers for the purposes of competition. Toward midday the sun shone feebly for a few moments, after which the clouds again closed thickly over the sky. The work as a whole was fairly good, though there were waits at intervals throughout the days for dogs which were lost, or which were seemingly difficult to keep to the course.

Roland and Sam T. were cast off at 8:45. Both pointed a bevy in open sedge. San was near by a bevy which was seen to flush. Roland pointed a bevy. Sam flushed some scattered birds. Roland during the heat found and pointed four bevies, and made one point to which nothing was found. Sam was lost a long time; when found he was in a stanch point on two birds. Both were fast and diligent workers. Roland proved to be the best finding dog, and worked with greater judgment.

Dave Earl and Joe Cummings were started at 10:40. In the heat Joe made one point to which nothing was found; Dave made two similar ones. Joe made one point on a single bird. Dave made two points on bevies, one of which he located awkwardly, and one point on a single, which was flushed after he moved on. Joe was ranging with less scope and vim than in his prior competition. Dave was going fairly well.

Ripsey and Pin Money starte at 12:53, after lunch. The former was out of form, ranging with less enthusiasm and scope than in her trials in the Members' Stake at Newton. Pin was roading on a bevy, which flushed, but whether she was blameless or not the cover prevented any one from determining. Afterward she found and pointed four bevies, and made a second point on a bevy which was marked down by the highway. Both were steady to shot. Pin was working more seriously than when she competed in the All-Age Stake. Up at 2:20.

Second Round.

Six dogs were selected for further trial. Of these Dave Earl could have been left out on his showing in the opinion of your reporter. They were run as follows:

Young Jingo and Roland began at 3:02. Jingo pointed a bevy in a cornfield, doing a good piece of work. Roland, called in to back, pointed the same bevy. Next Jingo made two flushes on bevies. Roland found and pointed a bevy; Jingo was elsewhere at the time. Both showed good speed and judgment in working out their ground, though Jingo was not working up to his class standard on birds in this heat. Up at 3:39.

Lena Belle and Joe Cummings began at 3:40. Lena made two finds and points on bevies. Joe pointed three bevies. Each backed promptly and well. The heat ended at 4:17. Lena's finds were the result of diligent and good ranging. Joe's finds were largely the result of good luck, as he was ranging narrow, and was not exercising much judgment in beating out his ground. The heat was Lena's by a large margin in her favor.

Dave Earl and Pin Money started at 4:22. Dave made two finds and points on bevies, two points on singles and one point to which nothing was found. Pin found and pointed a bevy, made a point on a single, and another, which was all right till she moved on to locate better and flushed the bird. She also made one point to which nothing was found. Up at 5:04. Pin Money was the wider ranger, though Dave was running a strong, good race. They were held in most of the time, working on ground which contained many scattered birds of previous heats.

This ended the work of the day.

Saturday, Dec. 10.

The weather was clear, cool and pleasant. Joe Cummings and Roland were to run together; with Lena B., Dave Earl and Pin Money in reserve, to be run if the judges deemed it necessary to do so.

Third Round.

Joe Cummings and Roland were started at 9:25. Roland made a point at the edge of pines in sedge; nothing found. Next Joe and Roland pointed near each other; Roland roaded to the bevy about 20yds. away and pointed it; Joe backed; the latter was outworked in the locating of this bevy. Roland pointed a single in sedge pines. Sent on. In an open field Joe trifled with some larks. Next he pointed in corn. Roland backed; the dogs then began roading; Roland followed the trail accurately, while Joe seemed to be unable to hit it off. Roland pointed the bevy nicely, and soon afterward the dogs were ordered up. Time 10:15.

Roland and Pin Money were cast off at 10:36, and ran four minutes to comply with the rule which requires that the winners of first and second shall run together, a merely technical compliance, with no competition in it.

The judges announced the winners as follows: First, Pin Money; second, Roland; third, Dave Earl.

The Irish Terrier Club of America.

THE following stakes and special prizes given by the Irish Terrier Club will be competed for at the coming Westminster Kennel Club show in February next.

Grand challenge cup for dogs (value $100): The entry fee is $5 for each dog. The winner to receive 50 per cent. of the money; 30 per cent to go to the second, and 20 per cent. to the third.

Grand challenge cup for bitches (value $100): The entry fee is $5 for each bitch. The winner to receive 50 per cent. of the money; 30 per cent. to go to the second, and 20 per cent. to the third.

The home-bred puppy stakes (silver cup added by the club): The entry fee is $5 for each terrier. There is one prize, which is a silver cup and the total amount of the entry fees.

Special prizes: $5 cup for best dog or bitch in puppy classes, for best dog in novice classes, for best bitch in novice classes, for best dog or bitch in limit classes, for best dog or bitch in open classes, and $10 cup for best stud dog or brood bitch shown with two of his or her produce, to be entered in appropriate classes. Dog or bitch, 25 per cent.; produce, 75 per cent.

All the above stakes and special prizes are open only to members of the Irish Terrier Club of America.

IRISH TERRIER CLUB OF AMERICA.

Westminster Show.

HEMPSTEAD, N. Y.—*Editor Forest and Stream:* Kindly announce that the twenty-third annual bench show of dogs, given by the Westminster Kennel Club, will be held in Madison Square Garden, New York, on Tuesday, Wednesday, Thursday and Friday, the 21st, 22d, 23d and 24th of February, 1899. JAS. MORTIMER,
Superintendent and Secretary of the Show.

Alabama Field Trials.

BIRMINGHAM, Ala., Dec. 5.—*Editor Forest and Stream:* I send you the programme of the Alabama Field Trials Club trials, which will be held at Madison, Ala., beginning Feb. 6. The trials will be open only to Alabama owned pointers, English, Irish and Gordon setters. For all stakes, pointers and setters will run together, and must be handled by owner or other amateur resident of the State. The judges are: W. W. Titus, West Point, Miss.; Geo. E. Gray, Appleton, Minn.; H. S. Smith, Birmingham, Ala.

The Derby.—For pointers and setters whelped on or after Jan. 1, 1897. Entries close Jan. 10, 1899, with $2.50 to nominate and $2.50 additional to start. Winner of first gets 50 per cent.; second, 25 per cent., and third, 15 per cent. Dogs having won first in any open field trials are barred.

All-Age.—For pointers and setters of any age. Entries close Jan. 10, 1899, $2.50 to nominate and $2.50 additional to start. Winnings same as in Derby. Dogs having won first in any open field trials or first in the All-Age Stake of the Alabama Field Trials prior to Sept. 1, 1898, are barred.

First forfeit of $2.50 must accompany nomination and be remitted to secretary on or before Jan. 10, 1899, for above stakes.

Puppy Stake.—For puppies whelped in 1898. Entries close night before running. No entrance or starting fee. The winner gets a handsome silver cup, donated by the president of the club. Puppies in this stake will only be required to point and back, and will not be penalized for breaking shot, chasing or unsteadiness to wing.

Champion Stake.—For pointers and setters of any age and regardless of previous winnings. Entries close night before running. No entrance or starting fee. Winner gets a $50 silver cup, donated by the club, and his dog the title of State champion.

This being an amateur organization, pure and simple, the running rules are modified to meet the requirements of shooting dogs, and amateur handlers and the judges are requested to bear this fact in mind.

The first heat of the Derby, All-Age and Puppy Stakes will be not less than thirty minutes; following heats at discretion and direction of the judges.

The first heat of the Champion Stake will be of one and a half-hours' duration; following heats at discretion and direction of the judges.

The club desires those competing at their trials to show their dogs to the best advantage, and not hustle for points on scattered birds, assuring them that each dog will be given a thorough test, both as to his finding and pointing qualities.

The number of times a dog points, backs, etc., shall not necessarily be given the preference; but the quality of the performance will be considered in connection with the frequency of the occurrence.

The judges will give greater credit to dogs showing the best natural qualities, it being the desire of the club to have the best dogs placed to the front, irrespective of the luck which is supposed to attend competitions of this nature. The judges will be requested to give more attention to a dog's natural finding qualities than has been done in the past years, viz.: Intelligent ranging; desire to find birds independently; bird sense and nose, or expressed in fewer words, dogs showing the greatest ability to find birds.

The judges are requested to give greater credit to the dog that works promptly, without noise or severity, and is obedient, prompt, cheerful and easily handled.

Pointing fur, feather, reptile or scent of game birds, if the judges deem the same excusable, shall not be considered a false point.

False pointing, breaking in, breaking shot or chasing shall be gauged by the judges in their discretion.

All dogs (except those in Puppy Stakes) should be broken to show to best advantage.

Retrieving shall not be required nor considered in any stake.

This being an amateur State organization, the sportsmen of Alabama should support it with their membership and dogs. Annual dues, $2.50; initiation fee, $1. The object of the organization is to foster good fellowship among sportsmen, enforce the laws for the protection and preservation of game, to improve the breed and quality of shooting dogs, and to increase the interest in legitimate sport with dog and gun. The holding of field trials is to bring the sportsmen in closer touch, and to enjoy a friendly field contest with shooting dogs. Come and bring your friends. Ladies are especially invited. The expense is light, the pleasure great.

Application for entry blanks, membership blanks, or other information furnished on request to the secretary-treasurer.

Madison is located on the Memphis & Charleston (Southern) Railroad, midway between Decatur and Huntsville. Trains from the South on Louisville & Nashville Railroad make close connection at Decatur with the M. & C. The trial grounds at Madison contain over 10,000 acres, and have been restocked with birds the past spring. Hotel rates will be $1.50 per day, including noon lunch on trial grounds. Saddle horses $1 per day. Comfortable quarters for dogs.

Railroad rates will be one fare for the round trip over the L. & N., M. & C., and probably other lines.

The annual meeting of the Alabama Field Trials Club will be held at Madison on evening of Feb. 6, 1899, for election of officers, admission of new members and the transaction of any other business.

By order of the president.

T. H. SPENCER, Sec'y-Treas.

Books for Holiday Presents

SHOULD be ordered in good season, to avoid delays. Every year, experience has shown, some books have been ordered from the Forest and Stream Publishing Co. at dates too late for sending them in season to reach recipients by Christmas.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

Rifle Range and Gallery.

Cincinnati Rifle Association.

THE following scores were made by members of the Cincinnati Rifle Association in regular competition, Dec. 11, at Four-Mile House, Reading Road. Conditions, 200yds., off-hand, at the German ring target. Gindele was declared king with a score of 226. Gindele was high on the honor target with a score of 70. Gindele's 229 was high for the Uckotter trophy:

King target:

Gindele	21	22	23	22	22	23	23	23	22	25	—226
Weinheimer	15	11	14	23	10	20	22	11	23	18	—176
Roberts	15	21	15	22	22	15	20	18	16	21	—185
Uckotter	17	17	16	7	12	20	1	23	14	14	—141
Wellinger	19	15	24	17	23	21	21	18	16	23	—197
Drube	16	20	17	13	24	16	23	23	24	16	—192
Topf	16	15	3	16	23	11	20	17	16	17	—149
Payne	13	15	16	12	19	15	19	20	13	24	—164
Strickmier	16	21	20	22	21	21	21	22	21	21	—206
Hasenzahl	20	20	20	22	24	23	24	12	25	16	—206

	Honor target.			Special scores.

Trap-Shooting.

Fixtures.

Dec. 14.—Stuttgart, Ark.—All-day tournament; live birds and targets.

Dec. 19-21.—Kewanee, Ill.—Tournament; live birds and targets. E. E. Baker, Kewanee, Ill., and V. Studley, Neponset, Ill., Managers.

Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 22.—Newark, N. J.—Regular shoot of the East Side Gun Club.

Dec. 26.—Newark, N. J.—Christmas shoot of the East Side Gun Club.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

Dec. 28-29.—Auburn, N. Y.—Auburn Gun Club; live birds and targets. C. W. Tuttle, Sec'y.

1899.

Jan. 2.—Newark, N. J.—Annual shoot of the South Side Gun Club. I. H. Terrill, Sec'y.

Jan. 2.—Newark, N. J.—New Year's shoot of the East Side Gun Club; live birds; begins at 10 A. M.; main event at 15 birds, $5, birds extra.

Jan. 5.—Newark, N. J.—Tournament of East Side Gun Club; main event, match between Morfey and Schortemeier for State championship.

Jan. 17-19.—Hamilton, Ont.—Tournament of the Hamilton Gun Club. John Parker, Manager.

Jan. 17-20.—Hamilton, Ont.—Annual tournament and grand Canadian handicap of the Hamilton Gun Club; $1,000 guaranteed. H. Graham, Sec'y.

Jan. 18.—Reading Pa.—The Reading handicap; open to all. Arthur A. Fink, Manager.

Jan. 18.—Stony Creek, Pa.—Stony Creek handicap, 25 live birds. A. A. Fink, Manager, 426 Franklin St., Reading, Pa.

April 6-8.—Utica, N. Y.—Fulford's handicap at live birds. E. D. Fulford, Manager.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-20.—Lincoln, Neb.—The Lincoln Gun Club's second annual interstate tournament; targets and live birds; $500 added. Geo. L. Carter, Sec'y.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; added money. H. A. Brehm, Pres.

April 25-28.—Baltimore, Md.—Tournament of Baltimore Shooting Association; targets and live birds; money added. Geo. L. Harrison, Sec'y.

May 16-19.—Erie, Pa.—Ninth annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Reed Hurst Gun Club. Frank W. Bacon, Sec'y.

May 16-20.—St. Louis, Mo.—Tournament of the Missouri State Fish and Game Protective Association. H. B. Collins, Sec'y.

May 24-25.—Greenwood, S. C.—Annual live-bird tournament of the Greenwood Gun Club; 25-bird Southern Handicap. R. G. McCants, Sec'y.

June 7-9.—Columbus, O.—Tournament of the Ohio Trap-Shooters' League, under the auspices of the Sherman Rod and Gun Club. J. C. Porterfield, Sec'y, O. T. S. L.

June 7.—Buffalo, N. Y.—New York State shoot.

June 14-16.—Cleveland, O.—Cleveland Target Co.'s tournament.

DRIVERS AND TWISTERS.

The programme of the St. Thomas, Ont., tournament, known as Thomas Donley's second international tournament, fixed to be held on Dec. 27 to 30 inclusive, is now ready for distribution. It will be under the management of the well-known expert, Mr. John Parker, of Detroit. On the first day there are eight target events, 10, 15, 20 and 25 targets, entrance respectively $1, $1.50, $2 and $3, five of which have each $5 added money. There are also two live-bird events, the first at $10, $7 entrance, including birds, $15 added, class shooting, 50, 30 and 20 per cent. No. 2 is the grand international handicap, for the Gillman and Barnes international handicap championship trophy of the United States and Canada; 25 live birds, $15 entrance, including birds, $150 added, handicaps 26 to 32yds., high guns; divided 15, 13, 11, 10, 9, 8, 7, 6, 5, 4, 3, 3, 2, 2, and 2 per cent. There are eight target events on the second day, much like the programme of the first day. The international live-bird event will be continued on the second day. On the third day there are six target events, and two at live birds; one at 10 birds, $7 entrance, $15 added, class shooting, 50, 30 and 20 per cent., and a two-men team race, any two men, $10 entrance, 50, 30 and 20 per cent. On the fourth day there are six target events, the last of which is the team race for the international team trophy, 25 targets per man, five men to each team; $10 added. Each team must be composed of bona fide members of any one regularly organized gun club, all residing in the same city, township or village. The trophy becomes the property of the winning team; moneys divided 60 and 40 per cent. between the two teams making the highest scores. There also are two live-bird events on the last day, one a $2 miss-and-out, the other at 15 live birds, $10 entrance, $25 added; moneys divided 20, 18, 16, 14, 12, 10, 6 and 4 per cent. Entrance includes targets and birds. Targets 3 cents each, one cent of which will be set aside and divided into five equal parts, to be divided among the five highest averages; team race for team trophy, miss-and-out, and the two-men team race are not to be included in averages. Live birds 20 cents each. Moneys divided in target events as follows: 10 targets, 40, 30, 20, and 10 per cent.; all other events, 30, 25, 20, 15 and 10 per cent. The professional expert will be allowed to shoot only in a few live-bird events, but can shoot for the price of targets only, and thereby can compete for the averages. The handicap committee will consist of two Canadians and one American. The management has made arrangements with the Customs whereby Americans can ship their guns to Jas. Overend, American Express agent, St. Thomas, Canada, and have them admitted free of duty. Passengers, when purchasing tickets over the Wabash R. R., M. C. R., G. T. R., C. P. R. and L. E. & D. R. R., should purchase tickets for one way only, securing certificate from agent, which will be honored for return passage at one-third fare when signed by the secretary, Thos. Donley, to whom all communications should be addressed.

The East Side Gun Club, of Newark, will hold their regular club shoot at live birds on Dec. 22, in the afternoon, on their grounds, near Foundry street and the Plank Road. On Dec. 26 (Christmas shoot) and Jan. 2 (New Year's shoot) there will be open sweepstakes and handicaps at live birds on the same grounds, commencing at 10 A. M. The main event will be at 15 birds, $5 entrance, birds extra at 25 cents on each of the holidays. Rose system in the division of the moneys, ratios 6, 3 and 1 if three moneys, and 6, 3, 2 and 1 if four moneys. There will also be an all-day tournament on the club's grounds on J 5, at 10 A. M. The main event will be before the State championship cup between Mr. Tom Morfey, the challenger, and Mr. L. H. Schortemeier, the holder of the cup, at 50 targets. There will be sweepstakes at 10 and 25 targets, entrance 50 cents to $2, including targets at 2 cents each.

The prize handicap series of the Boston Gun Club commences Dec. 21, and on every Wednesday thereafter till the series ends, on March 29, 1899, excepting Wednesday, Feb. 22. The conditions of the individual shoot are, entrance free and open to all shooters; aggregate of the six best scores to count out of the fourteen shoots; each to shoot at 21 targets, namely, 10 at known angles, 5 at unknown angles, known traps, and 3 pairs. There are ten prizes. The team prizes are Thurman shooting blouses or sweaters to the winning team; 200 loaded shells to second team. Each team shall consist of two men, 40 targets to each team, each man shooting at 10 targets, known, and 10 targets, unknown angles, Any number of teams can enter. The five best scores to count. Handicap distances. Final ties decided by shooting a complete score. Boston Gun Club rules to govern. Targets, 1½ cents. For further information, address 23 Elm street, Boston.

Charlie Zwirlein trapped some great birds at his grounds, Yardville, N. J., on Friday of last week, Dec. 9. Zwirlein's birds are always good and fast, but on this occasion they were helped by a strong wind, that made many of them "unkillable." So good were they that in the main event, at 25 birds, $10 entrance, birds extra, 23 was high. Johnson, of Philadelphia, a rattling good shot, to be placed on the 27yds. mark, won first money alone on 23; Aaron Doty, of Paterson, N. J., won second on 22 from the 28yds. mark. T. W. Morfey, 29yds.; Louis Harrison, 28yds., and W. Apgar, 27yds., divided third on 21, while Johnson Warfort, 28yds., of Frenchtown, N. J., was the lucky man to get fourth money alone on 20. Fred Quimby, 30yds., and A. L. Ivins, 30yds., were the scratch men, and never got into the money. Ivins had at one time a good look in for first money, as at the end of the 8th round he was the only man with a straight score.

The name of L. H. Japhet, the nom de fusil of the holder of the E. C. cup, and the championship of New Jersey at inanimate targets, conceals fairly successfully the identity of the hero of the contest at the Bergen County Gun Club's traps at Hackensack, N. J., on Dec. 7. Mr. Japhet is a gentleman of almost as many cognomens as he possesses pounds avoirdupois. When we add that his pet name among his friends is a base libel upon the number of cubits in his stature, it would seem that the riddle was easier to guess than were the several locations of the targets when his opponents tried to gauge them on the afternoon of Dec. 7.

T. W. Morfey always seems to be hunting trouble! Not content with being embroiled in a live-bird contest at 100 pigeons with Aaron Doty, of Paterson, N. J., on Wednesday of this week, Dec. 14, he must needs post $10 forfeit and challenge Mr. Japhet for the E. C. cup and the New Jersey championship at targets. This match has been set for Thursday, Jan. 5, on the grounds of the East Side Gun Club, of Newark, N. J. The club will take advantage of the individual match for the championship as a drawing card, and will hold an all-day shoot at targets same day.

Irby Bennett, of the W. R. A. Company, is up North for a week or two, prior to going home to Memphis for the Christmas holidays. He will spend most of his time while up North at the company's factory in New Haven, making periodical visits to New York to let us know that he is alive. Before leaving for the South he will attend the annual meeting of the Interstate Association, and will cast his company's vote in regard to the policy of the Association for next year. He expresses the opinion that Memphis and the South generally will be well represented at the Grand American Handicap next April.

Mr. Paul R. Litzke, of Little Rock, Ark., has laid aside his pencil for a while, and is taking action with the gun on his own account. In a letter of recent date to us he writes as follows: "I am at the present writing located in Wilmot, Ark., just this side of the Louisiana line. I am here in quest of quail: I spent several days in the vicinity of Arkansas City last week, and was with a party from that town on a camp hunt for two days. During that time we bagged one deer, one turkey, five mallard ducks, four quail, two rabbits and forty-five squirrels. The latter were fox, gray and black. It was my good fortune to kill the turkey."

The all-day shoot at Hackensack, N. J., was a success, twenty-four shooters turning out. The days are short now, but with hustling some 3,000 targets were thrown between the hours of 11 and 4. The success of this shoot will probably start other clubs on the same lines, and it may be that the winter season in and around New York may prove a busy one for trap-shooters. There is plenty of talent here, but it is a hard matter to bring it together.

The extremely cold weather and dull sky of Saturday last, Dec. 10, had its effect on the crowd of shooters at all the local grounds. The Brooklyn Gun Club's monthly shoot was especially affected in this way, the usual gathering of twenty shooters or so dwindling down to a scant dozen. Among them was a guest, Mr. Crocker, from New London, a friend of Mr. John Milliken, of the Brooklyns; Mr. Crocker showed he could shoot a bit, despite the cold weather and a strange gun.

Capt. A. W. du Bray, of the Parker Gun Co., has been at Shreveport, La. Under recent date, among other things, he writes, us: "I have had some duck shooting here with my friend Mr. Sam Enders. We bagged in all about 140. For some reason ducks are not here. My good friend Mr. A. E. Jenkins, over whose decoys I shot, could not accompany us, as he is so busy in the management of an enormous cotton press that he could not get away—much to my regret."

Rolla Heikes has been shooting quail. He has scored about 200 of them this season, with several dead out of bounds. Believing that he has taken all the toll that is coming to him, he has now quit the quail, and will once more take to pigeons, sparrows and targets. Regarding certain rumors of provisional challenges for some of the trophies he now holds, Mr. Heikes says in a personal letter to a friend, that everybody interested knows where he lives, and that anything lodged in due form will receive proper recognition at his hands.

Under date of Dec. 8 Mr. H. T. Hearsey, secretary of the Limited Gun Club, Indianapolis, writes us as follows: "All indications point favorably to the largest tournament of the year. We are receiving a large number of entries, and the club is sparing no pains or expense to make this tournament the largest of the season. Mr. Fred Erb, Jr., and his celebrated dogs will do the retrieving for us at our live-bird shoot, Dec. 19 to 23."

The Boiling Springs Gun Club, of Rutherford, N. J., and the Passaic City Gun Club, of Passaic, N. J., shoot the first team race of their series on Saturday next, Dec. 17. The shoot will be held on the grounds of the Boiling Springs Gun Club, Captain Paul Jeanneret, of that club, having won the toss for choice of first ground. In addition to the team race, there will be open sweepstake shooting as long as the daylight lasts.

Manager John S. Wright, of the Brooklyn, N. Y., Gun Club, has decided to change the date for his all-day live-bird shoot, already announced for Jan. 5. This change will be made to avoid clashing with the East Side Gun Club's all-day shoot and the Morfey-Japhet match shot in connection therewith. Mr. Wright has no date fixed as yet, but it will in all probability be one week later than originally announced.

Capt. Money has been paying a penalty for his victory over Mr. Guthrie at the Carteret traps on Nov. 29. All last week he was confined to the house with a bad cold and threatenings of pneumonia, thereby missing a chance to win the championship of New Jersey at Hackensack, on Dec. 7, and also a chance to win first money in Zwirlein's 25-bird handicap on Dec. 9.

As an item of news it may be mentioned that Rolla Heikes will on Jan. 1 sever his connection with the Winchester Repeating Arms Company, whose gun he has shot to the front so long and so well. The authority for the above information is Mr. Irby Bennett, so there can be no doubt as to its accuracy. What Mr. Heikes' next move will be is not known.

Mr. John Parker, of Detroit, Mich., will manage the Hamilton tournament, to be held in that place on Jan. 17 to 19, inclusive. American Association rules will govern. Mr. Parker will also manage Thomas Donley's second international tournament, Dec. 27 to 30.

Mr. Geo. C. Harrison, secretary of the Baltimore Shooting Association, writes us as follows: "The Baltimore Shooting Association have decided to change the dates of their spring tournament from April 4-7 to April 25-28, 1899. We hope by doing this to have good weather and not clash with any other shoot. Four hundred dollars will be added; perhaps more."

A telegram from Mr. Hough advises us that in the contest for the Cincinnati live-bird trophy at Watson's Park, Chicago, on Monday of this week Elliott won by a score of 95 to Gilbert's 92. There was a snowstorm prevailing in respect to weather and the birds were slow.

Jim Elliott didn't do a thing to Dr. Smith, of St. Louis, last week. The Doctor's hand must have lost its cunning, or he would not have so severely disappointed his friends surely. There is a big difference between 98 against Dr. Knowlton one week and 84 against Jim Elliott the next week.

W. L. Colville (Dick Swiveller), of the Gold Dust (U. S.) Powder Co., of San Francisco, Cal., was in New York last week for a few days. Mr. Colville, whose home is in Batavia, N. Y., made several calls along Sporting Goods Row, and left just in time to catch the blizzard that struck Batavia on Dec. 8.

C. W. Tuttle, of the shooting committee, writes: "Please insert in 'Fixtures': Two days' tournament of Auburn Gun Club, at Auburn, N. Y., Wednesday and Thursday, Dec. 28 and 29, 1898; live birds and targets; live birds trapped at 15 cents each. Both magautrap and expert traps."

Later.—We regret to learn shortly before going to press that Col. Courtney is confined to his home in Syracuse, N. Y., with a severe attack of pleuro-pnuemonia. This attack has, of course, put a stop to his Western trip, as outlined by him during his stay in this city.

Col. A. G. Courtney has left us. Nuff sed! He will next be heard from at Watson's shoot in Chicago, and later at the Limited Gun Club's shoot in Indianapolis. At least, such were his plans when last reported.

At a meeting of the Audubon Gun Club last Saturday evening, June 7 was fixed upon as the date for the next New York State shoot.

The Cleveland Target Co. announce that they will hold their sixth annual tournament on June 14, 15, 16.

The South Side Gun Club, Newark, N. J., will hold its annual shoot on Jan. 2.

The Grand American Handicap.

During the years when the Grand American Handicap was struggling from a humble beginning to its broad success as a national event all its responsibilities were left to the care of its promoters. Before it was proved to be the greatest shooting success of America no shooter made the discovery that it was a matter which was worthy of his anxious solicitude; no shooter discovered that he knew how to run it better than its subscribers know how to run it; no one had then discovered that the real center of purpose was to so adjust the competition that the men who killed 23 were to be sure winners. Now that it is and has been a success, why not recognize that its present policy is correct?

All the arguments adduced in recent weeks against the high-gun system, which has so far been something of a factor in the success of the Grand American Handicap, have not been from the standpoint of any improvement in matters directly pertaining to the Grand American Handicap; they are all from the standpoint of the man who killed 23; the man who wishes to have matters so adjusted that 23 will be in the money.

The majority of shooters seem to lose sight of the fact that the Grand American Handicap is a business institution, under the direct control of its subscribers. As such, it is directly under their control in manner like to that of any other business where the question of authority is under consideration. To propose that any number of outsiders should by a majority vote dictate to the Interstate Association how it should run its own business affairs is in the highest degress absurd. It is the more absurd since the advantages sought for are personal; in plain words, the Association is asked to depart from the policy which has proved a success in its own affairs and adopt one which is in the interest of a few shooters.

It has been suggested that if changes of a certain kind were made in respect to the division of the moneys the entries would be much larger, and that groups of shooters would come from certain towns and cities. Such a view is an erroneous one. The number of shooters which have contested in the handicap is not what has given it its prestige. It is the fact that it is a shoot which appeals to the best shooting talent in America. This is what excites the liveliest public interest in it and gives it such unlimited prestige; and this is a matter which far surpasses the personal interest of the man who killed 23. Nothing would swamp the Grand American Handicap so quickly and so effectually as a squad of shooters from every city.

Let us suppose that 600 shooters entered in the handicap; it then would be too cumbersome to manage. The number entered in the last handicap is quite enough for its success. The matter of the number of entries is only one factor of many to be considered in conducting it. It has as many entries in prospect as there are any need of.

Any cheapening of it would be a loss in prestige; would be a bid for shooters having less skill than is necessary for a contest of such importance; would strip it of its distinguishing features and make it a common 25-bird event, such as may be found betimes in any corner of the land, save the one fact that it would be given under the most distinguished auspices.

The plea has been made that when a man travels several hundred miles, kills 23, and returns home without any of the money, he is suffering a hardship. If he cannot afford the expense, he certainly is suffering a hardship, but it is one of his own seeking. His misjudgment, however, is not the affair of others. Such matters are personal, and the person interested should think seriously before deciding to enter. But whether he wins or loses, he should abide by his own acts. He enters with his eyes open. It is a game in which there are losers as well as winners.

If one cannot afford to lose, one would better remain at home, or at least refrain from entering. It is hardly fair to enter on one's own judgment, and then in case of loss blame some one else for it. It is a competition of nerve and skill. Whether one came a thousand miles to compete, or competed five times before winning, or can kill only 23, is irrelevant to the matter.

The best equipment for competition in the Grand American Handicap is to be able to shoot well; to be able to afford the expense, and to look pleasant, win or lose. The wail of the loser is more likely to come from the smart of a hurt and self-interest than from the enthusiasm of the philanthropist. Whatever system is adopted, there will therein be losers who are next to the winners; but, in the eye of competition, all losers look much alike.

IN NEW JERSEY.

New Jersey Championship at Hackensack.

Dec. 7.—The open contest for the inanimate target championship of New Jersey was decided to-day on the grounds of the Bergen County Gun Club, of Hackensack, N. J. The contest was made the excuse for an all-day shoot, a full programme of events being pulled off between the hours of 11 A. M. and 4 P. M.

The club was fortunate in the day, the weather being all that could be asked for at this time of the year. The attendance, too, was decidedly flattering, considering the way trap-shooting has been going around New York. Not that there is not plenty of shooting; on the contrary, there is a great deal of shooting, but the number of clubs divide up the programme in such a way that small attendances mark all local gatherings as a rule.

Of the club's officers, J. R. Banta was present from start to finish and helped materially to carry the shoot to a successful close. Messrs. Griffith, C. O. Gardner and H. D. Warner also got away from business as early as possible, and did their share in running things for the comfort of the guests. The management of the shoot was placed in the hands of Edward Banks, who moved things along so rapidly that a total of 2,800 targets were trapped in the programme events. W. R. Hobart was in the cashier's office, his work being cut out for him by the twenty-four shooters who took part in the shoot.

The main attraction was, of course, the 50-target race for the championship, which had fifteen entries, five "outsiders" also shooting along in the optional sweeps on each 25 targets. The championship emblem is a silver cup, which was donated by the American E. C. & Schultze Gunpowder Company to the New Jersey State Sportsmen's Association over a year ago. It was first contested for during the Jersey State shoot at Passaic, N. J., in the fall of 1897. On that occasion the conditions were only 25 targets, unknown angles. Justus von Lengerke and Colin R. Wise tied for the title and trophy with 24 out of 25, Von Lengerke winning on the shoot-off. He was at once challenged by Ferd Van Dyke, who took the cup by default, Von Lengerke surrendering his title in preference to defending it. Since then Van Dyke has held it until the present date; but realizing that his health was such as to preclude almost all chance of his defending the cup during the bad weather of the winter, Van in a sportsmanlike spirit returned the cup into competition, expressing the wish that "the boys may have a jolly scrap for it."

The donors of the cup having reserved to themselves the privilege of changing the conditions, and the New Jersey State Sportsmen's Association having once more gone to sleep, it was therefore decided to place the cup in open competition, the conditions being changed to 50 targets, unknown angles.

The result of to-day's contest was somewhat in the nature of a surprise. Not that the score of the winner, L. H. Japhet, the sturdy captain of the East Side Gun Club, was so large, but that the scores of the favorites in the race were so low. Dominie Beveridge only scored 32 out of 50, but still he beat Tom Morfey by four tagets, as the latter only scored 28! Harold Money, who was picked as a winner by most of those present, could not locate the targets, scoring 39. Neaf Apgar, who has not been doing much shooting lately, was really Japhet's only antagonist to do himself justice, as his total of 45 was well earned. Japhet made a good start, running his first 25 without an error, finishing up with 22 out of his second 25. He was at once challenged for the cup by T. W. Morfey, who posted the requisite $10 forfeit and a written challenge in the hands of the secretary of the American E. C. & Schultze Gunpowder Company the minute after the result was announced. Mr. Japhet at once fixed Jan. 5 as the date for the match, the scene of the contest being the grounds of the East Side Gun Club, of Newark. The conditions of the race will be 50 targets, unknown angles.

Below are the scores for the championship:

L Japhet	11111111111111111111111111101111101111111111110111—47
N Apgar	11111111100111111101111111111111111101111110111111—45

The Sweepstake Programme.

The sweepstake programme, including the championship event, called for 170 targets. Eleven men shot through the programme, all but Banks being "in for the money," the latter shooting all day for "targets only."

The table of scores given below shows that a total of twenty-four shooters took part in the sweeps, some of those who shot at only a few targets being in "for targets only." Among those present were: Col. A. G. Courtney, of the Remington Arms Company; B. H. Norton, of the Hazard Powder Company; Harold B. Money, of the American E. C. & Schultze Gunpowder Company; Ed. Taylor and E. A. W. Everitt, of the Laflin & Rand Powder Company; Louis Harrison, of Minneapolis, Minn.; Oscar Hesse, of Red Bank, N. J., the U. S. representative of the Walsrode Powder Company; Neaf Apgar, New York, manager of the Gun Bore Treatment Company, etc.

Curiously enough, the scores were very low generally, a strong wind blowing nearly all day, particularly strong in the morning and early afternoon hours. It is seldom that with such a list of good shots averages rule so low. Some laid it to the background; others to the wind. The new champion of New Jersey did not find the targets successfully, save in the championship event; in that event he bunched his hits very ably. Tabulated scores follow:

Events:	1	2	3	4	5	6	7	8	9	Shot at.	Broke.	Av.
Targets:	10	15	10	15	20	50	15	20	15

Nos. 5 and 8 on the programme were "prize events," the Bergen County Club donating a silver loving cup as a prize to the high man in each of these events. Any one was eligible to shoot for the cup so long as he put up the price of the targets. Handicaps were awarded by Messrs. Banks and Hobart, each of the contestants receiving from one to five misses as breaks added to their scores. The allowance did not count in the division of the moneys.

In No. 5 Everitt and Joy tied on highest possibles, and shot off at 5 targets per man, according to the conditions as stated in the programme. Joy broke his 5 straight, Everitt losing 2 of his 5 targets.

In No. 8 there were seven ties on highest possibles, those in the tie being Everitt, Piercy, Money, Harrison, Taylor, Snyder and Wise. Shooting off again at 5 targets per man, Everitt was the only one to break his 5 straight, thus winning a trophy he had well earned.

Before closing an account of this pleasant little shoot, mention must be made of the hospitable manner in which the club kept open house, a hot turkey lunch and refreshments being served free to all, contestants and lookers on. Hot coffee was on tap all day. In the crisp cold air of a December day, such little attentions are much appreciated.

After the programme was shot out, some "fly-by-nights" would not be gainsaid, so several small extras were shot, Beveridge and Money reaping the greatest benefit from these races.

East Side Gun Club of Newark.

Dec. 8.—Fifteen members of the East Side Gun Club took part in the club shoot postponed to this date from the fourth Thursday in November, on which date the weather was too bad for the shooters to put in an appearance. Burn Johnson, a guest of the club, shot along and scored 8 out of 10 in the main event, and 4 out of 5 in the sweepstake.

In the club shoot all stand at 28yds., a handicap of "points" being the only handicap imposed. Each shooter is handicapped at so many points, and must kill that number of birds before adding a point to his total for the yearly prizes. L. H. Schortemeier was the only one to score 10 straight, while Hassinger won second money alone on 9 out of 10. The members have a $1 optional sweep on the club event, the purse being divided Rose system, four moneys, 6, 3 and 2 to 1. The weather was cold and clear, while the good birds trapped were helped by a stiff straightaway wind. Scores were:

Sweepstake, 5 birds, $2, all 28yds.: Schortemeier, Koegel and Otten 5, Duston, Feigenspan, Hassinger, Castle and Johnson 4, Leuthauser and Reiboldt 3.

Club shoot, 10 birds, all 28yds., handicap of points:

L Schortemeier, 7	2221222222—10
W Hassinger, 7	1212110122— 9
H Koegel, 7	2121211010— 8

I. H. Terrill.

The late Judge Samuel P. Walker.

When the shooters from Memphis, Tenn., visited Elkwood Park last March, and took part in the Grand American Handicap, there came with them Judge Samuel P. Walker, one of the legal lights of Memphis, who for some years filled the honored position of Judge of the Superior Court of the State of Tennessee.

The Judge entered in the Nitro Powder Handicap, and was one of those to divide the purse on 15 straight. In the Grand American he was not so fortunate, having to retire at the end of the 18th round with four misses to his credit. This failure to stay in the race until the end did not appear to trouble him a little bit, the success of others seeming to have as much in them to interest him as if they were his own. He was an ideal contestant; and the Memphis Gun Club always kept the seat nearest the stove for him.

It was not until a few days ago that we heard of his death. Well known and popular as he was, it seems strange that no notice of his decease had reached us sooner. From his warm friend and admirer, Mr. Irby Bennett, we learn that Judge Walker died a few weeks ago in Marlboro, Mass., where he had gone for a vacation to join his family, who had been summering there. His death was unexpected and sudden, and came to his friends in the nature of a severe shock. He was fifty-seven years of age.

Always fond of sport, he was a member of the Memphis Gun Club and of various other shooting clubs, among them the Wapanoca Club, famed for its duck shooting. As a memorial of his efforts in their behalf, the pigeon shooters or Tennessee now have a law legalizing live pigeon shooting in the State, which law was drafted by Judge Walker himself.

Elliott defeats Smith.

St. Louis, Dec. 7.—The match between Mr. J. A. R. Elliott, of Kansas City, and Dr. J. W. Smith, of St. Louis, was shot here to-day. Elliott was the victor by a score of 91 to 84. The conditions were 100 live birds, $100 a side.

At the end of the first 25 the race seemed to be in favor of the Doctor, the score then being 24 to 22 in his favor. At the end of the second 25, they were tied, each having killed 46 out of 50. In the last 50, Elliott gained steadily a greater lead, and won by the score above mentioned. The scores:

Elliott	2022120222222222*21212222—22
	2212211*121112222222221222—24

Rochester Rod and Gun Club.

Rochester, N. Y., Dec. 10.—*Editor Forest and Stream:* A regular meeting of the Rochester Rod and Gun Club was held last night, and all the reports presented show the organization to be in a flourishing condition. Trap-shooting contests are held every week at the club house, where more powder is burned than at any other ground in the State. It was determined to join the Fish, Game and Forest Preservation League. Measures were taken to increase the attractions and comforts of the club house on shooting days, and the result will no doubt be seen in an augmentation of smashed targets with consequent improvement in the skill of the shooters. Hereafter targets are to be thrown at practice shoots for 1 cent each.

R.

WESTERN TRAPS.

Montgomery Ward Diamond Badge.

CHICAGO, Ill., Dec. 10.—The contest for the Montgomery Ward & Co. diamond Badge, set forward one week on account of John Watson's live-bird tournament of next week, was held this week on Friday, Dec. 9, seventeen entries appearing. The weather was distinctly cold, though bright, and a brisk left-quartering wind made things interesting. Both sets of the live-bird traps were put into commission, and both worked perfectly. The first ten birds were shot at No. 1 set of traps, the next ten at No. 2 set, and the ties were completed at No. 1.

It was not a day for favorites, but for dark horses, the long handicap men as usual coming well to the front. Dr. Shaw was given 2 birds and could not land above 18. He was tied by Amberg, 3 birds; Comley, 1 bird, and Barto, scratch. Eddie Steck, still another winner of the badge, went out with 17. Steck was tied by Tramp Irwin, of the Laflin & Rand Powder Co., and by W. B. Leffingwell, of Montgomery Ward & Co. Leffingwell was allowed 3 birds, but left the score very much disgusted. He then came over to No. 1 set and killed 13 birds straight. George Roll, with 1 bird allowance, scored 19, and was tied by F. H. Hollister, 3 birds. There were five men tied on 20, Levi, Dwyer, Houston, Palmer and Hess, with handicaps varying from 2 to 6 birds. Considerable interest was evinced in the tie for first place. Levi started out at a hot clip, killing 10 straight in the tie without needing any of his 3 handicap birds. Dwyer, Houston and Palmer fell by the wayside on or before the 5 hole. Hess alone forged to the front and collared Levi at the end of the first string. This seemed to be as far as Levi could go, for he went to pieces rapidly, missing 4 out of his next 9. Hess went on, killing 10 out of his 12 birds, and thus winning the trophy. Mr. Hess is secretary of the Eureka Gun Club, and to-day he shot in a form which would seem to make it quite worth while to watch him in the future if he is given a liberal handicap. The records of the past few shoots would indicate that Barto deserved a bird or so better than scratch. The following are the scores:

Dr S Shaw, 29, 2	222222*222220222200222 —18
J Hadley, 28, 4	*12222*22211102002112202 —18
E C Rice, 26, 6	020022222220222002222022220—18

S Palmer, 29, 2	211222111*222202112222 —20

First shoot-off:

Levi, 26, 3	2222222222 —10	Hess, 29, 2	22222222201—10
Dwyer, 30, 1	22010w	Palmer, 29, 1	20110w
Houston, 28, 1	22010w		

Second shoot-off:

Levi, 26, 3	202022200w	Hess, 29, 2	222022220222—10

The Experts.

Jim Elliott displays commendable nerve in going after the Iowa boy next Monday, the race being set for 11 o'clock, Dec. 12. Gilbert is naturally a favorite on his record, but no one can tell what Jim Elliott will do after he gets past the first bird, which he is pretty sure to miss. The weather is apt to be cool and breezy, and the birds are flying well now, so that 95 would be a pretty good score, one would think.

Jim Elliott went to St. Louis on Dec. 7 and defeated Dr. J. W. Smith, the crack shot of that city, with a score of 91 to 84. This is something of a drop for Dr. Smith in so short a time, since he scored 98 birds himself in his race with Dr. Knowlton. By the way, this score of Dr. Smith's was widely quoted by St. Louis and other papers as the record of the year, these having evidently overlooked Rolla Heikes' score of 99 at Eau Claire, against Fred Gilbert.

J. J. Hallowell, Jr., of the U. M. C. Co., was out at Watson's yesterday for a little practice, and to-day a number of the shooters have gone out again to get ready for next week's game. John Watson says he will be satisfied with forty or fifty shooters, and he can handle that number with the greatest ease and comfort. It would not be surprising if some races were made as the result of this coming together of so many experts, and in any event we are certain to have one week which will be full of shooting.

Billy Mussey seems to be, as it were, coming back to earth again, and we may perhaps look for him as a feature in the old Watson game. Billy skun his friend Ben Dicks a couple of times this week at short races, as see elsewhere.

Waukegan.

Waukegan Gun Club, of Waukegan, Ill., met on Dec. 7 for their club handicap at 25 birds, ten members taking part, with the following results:

	Handicap.	Broke.	Total.
C Purcell	11	17	28
De Wolf	6	18	24
W Murray	5	17	22
Van Deusen	5	17	22
Efinger	7	15	22
B Dowe	6	16	22
Jemison	12	8	20
Hofmann	5	15	20
S Wright	5	13	18
Douglas	8	9	17

The following officers were elected for the ensuing year: President, James Van Deusen; Vice-Presidents, E. P. De Wolf, Wm. Bullock; Secretary, L. W. Jeffrey; Treasurer, George Hallowell; Trustees: O. H. Heath, J. C. Merchant, James Jemison.

Quiet.

The shoot of the Milwaukee Gun Club, which closed the first of this week, was rather quiet, only about a dozen participating. Lewis, J. E. Bush, Rogers, Andrews and A. Lockie, of Chicago, were among the leading winners of Saturday.

E. HOUGH.
1200 BOYCE BUILDING, Chicago, Ill.

Mussey vs. Wilcox.

A race was to have taken place on Dec. 8, between W. P. Mussey and Ben Dicks, but on account of Mr. Dicks having been called out of the city on account of the illness of one of his family, Mr. Chas. E. Wilcox consented to take his place. The race was at 50 live birds, 30yds. rise.

The day was quite cold, with a stiff left-quartering wind, accompanied by a good sunlight. The birds were good, strong flyers. Both principals shot in good form and each made some very commendable kills of fast birds. Following are detailed scores:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

C. S. Wilcox.....4 3 4 2 2 1 2 3 2 4 5 2 3 5 2 1 4 1 2 4 1 5 3 4 5
1 1 1 2 2 1 2 0 2 2 2 2 1 1 0 1 1 2 1 2 2 2 2 2 2—28

4 3 5 5 3 2 1 3 1 5 3 4 3 5 1 3 5 4 3 4 4 1 3 3 5
2 1 2 1 1 0 2 2 1 2 2 2 2 0 2 0 2 2 1 1 0 2 2 2 2—21—44

W. P. Mussey...3 3 4 4 1 4 5 2 3 2 3 5 3 2 1 5 2 5 4 2 1 2 5 1 3
2 2 1 1 2 1 1 1 2 * 1 2 1 * 1 2 1 2 1 2 1 0 1 1 2—22

3 2 1 4 3 5 3 5 1 4 2 5 2 2 4 1 3 5 2 2 3 4 5 1 3
2 1 1 2 0 1 1 2 2 1 1 2 1 2 2 2 2 2 2 1 1 1 1 2 0 1—23—49

Rice vs. Hallowell.

Preceding the above contest was a friendly race of 25 birds between Messrs. E. S. Rice, of the Du Pont Co., and J. J. Hallowell, of the U. M. C. Co., which resulted as follows:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

E. S. Rice.....5 4 1 1 2 3 1 2 4 5 2 1 3 5 4 2 2 2 2 3 3 4 5 1 5
1 2 1 1 2 2 * * 1 1 * 2 2 1 1 2 0 2 0 1 1 2 2 2 1—20

J. J. Hollowell.....1 4 3 2 4 5 5 3 2 1 2 3 4 4 1 5 5 3 3 4 1 4 2 2 4 1
2 2 2 2 2 2 2 2 2 2 1 1 2 2 1 2 2 2 0 2 1 2 2 2 2—24

Peavey vs. Mussey.

Following is another event in which Mr. Mussey shows quite good form in the race with Mr. Peavey, of Cripple Creek, Colo., who is now visiting in the city. The scores:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

C. W. Peavey.....2 4 1 3 1 3 3 5 3 3 1 3 1 1 4 3 2 2 3 3 5 3 4 3 3
2 0 2 0 2 0 2 2 2 1 2 2 2 2 2 0 0 * 0 0 0 1 2 0 1 0—14

W. P. Mussey.....2 2 4 3 4 4 2 1 5 3 4 4 3 3 3 4 4 4 4 1 4 3 1 4 3
1 2 0 2 2 2 0 1 2 2 1 2 1 2 2 2 2 2 1 1 1 1 0 2 1 1 1—22

Mussey vs. Dicks.

In a friendly race between W. P. Mussey and C. B. Dicks, which was shot at Watson's Park Dec. 6, the following scores were made. The birds were a good lot, trapped in a smart, driving wind. This is the event which led to the race to have been shot on the 8th inst., as mentioned in foregoing items. The score:

C. B. Dicks.....10120102*210*21120111211102112221110102121222111 2—41
W. P. Mussey....02120121222010212112111110122211122202111012121112 2—43

Mussey vs. Wilcox.

Mr. W. P. Mussey challenges C. S. Wilcox to a contest of 100 live birds, for the price of the birds, and is to allow Wilcox 7 of his lost birds to be scored as dead. Mr. Wilcox has accepted the defi, and sets the day of contest as of the afternoon of Dec. 21, Watson's Park, at 2 P. M.

Garfield Gun Club.

The Garfield Gun Club, of Chicago, held its second regular monthly contest at live birds on the club grounds on Dec. 12; there were twenty-one entries. The race was at 10 live birds, with distance handicap ranging from 25 to 31yds.

The day was very cold, with a driving wind from the right quarter, which aided the birds in getting away quickly. Quite a few of them fell dead out of bounds. The shooters, regardless of the weather, were full of enthusiasm, and continued until darkness made it almost impossible to see the bird when liberated.

T. P. Hicks carried off the honors of the day by making the only straight score, but was closely followed by Palmer, Steiger, Paterson, Davis and Fehrman, who killed 9. The scores:

Dr Meek	10*1212122— 8	N Nusley	*200000220— 3
S Palmer	12*1121122— 9	Fehrman	2202222112— 9
C Stiger	2011122212— 9	C P Richards	2021212200— 7
Riddiford	20102*0111— 6	S E Young	2022021012— 7
H Bradley	2*11100211— 7	Trail	1011111021— 8
N H Ford	2202222102— 8	T Eaton	0002110002— 4
A C Paterson	221222*211— 9	W A Jones	10221*2110— 7
C Comley	*0**2*1111— 5	D Russell	0210122212— 8
Dr Davis	2210111211— 9	A Hellman	2221010122— 8
R Kuss	2222022220— 8	T P Hicks	1212122121—10
J Workman	02022010*2— 5		

Following the medal contest were several 5-bird events, in which ties divided on the scores as follows:

Hellman	20010—2	Jones	20001—2
Eaton	21110—4	Davis	21110—4
Trail	01010—2	Richards	21102—4
Russell	21112—5	Fehrman	11122—5

Eureka Gun Club.

The next regular live-bird contest of the Eureka Gun Club, of Chicago, will take place at Watson's Park on Saturday afternoon, Dec. 17, at 1 o'clock P. M.

Chicago Challenge Trophy.

The trustees of the Chicago challenge trophy have decided that E. S. Rice, holder, shall shoot with E. C. Rice, challenger, at the next contest. The date and handicap have not as yet been decided upon, but it is expected to take place the first of the week following Watson's tournament, and most likely on Dec. 20 or 21.

A. C. PATERSON.

Trap around Reading.

READING, Pa., Dec. 6.—A private live-bird match was held to-day at Mr. Sidel's grounds, at Bernhardt's Station, near the city, between Robert Welsh and Yale Dolan, of Philadelphia, on one side, and Midget and Hunter on the other team. Each man shot at 50 live birds, $100 a side. The Philadelphians allowed their opponents to stand at 28yds., while they shot from 30yds. The birds were a fair lot of flyers, the majority being right-quarter birds. Messrs. Welsh and Dolan shot a very fine race, and made some fine kills with the second barrel. The match had been arranged to be shot between Welsh and Dolan and Midget and Coldren, but at the end of the 18th round, after missing 4, Coldren, who was not feeling well, retired and Hunter took his place. Coldren is a very good live-bird shot, but has not had very much practice this year, and was off considerable, and handicapped by not feeling well he decided to withdraw. The invited guests occupied the shooting house, as it was cold outdoors. Before the match several sweeps were shot off, the scores of which follow:

No. 1, 10 live birds, $5 entrance: Welsh, 30yds., 10; Midget, 28yds., 8; Coldren, 28yds., 6; Dolan, 30yds., 10; Hunter, 28yds., 9.

No. 2, 10 live birds, $5 entrance: Midget, 28yds., 9; Dolan, 30yds., 9; Coldren, 28yds., 7; eWlsh, 30yds., 10; Hunter, 28yds., 10.

Mr. Chas. W. Bechtel, of this city, officiated as referee; Oliver A. Tilton being in charge of the traps, while Duster officiated as scorer. The score of the team race follows:

Midget, 28.....0212212221*1122212221211122112222*2122122222220111—46
Dolan, 30.....2110212221221122*122122222122122222221 1*212122112—47
Coldren, 28.....202221122*111*212* w
Hunter, 28.....21222222211212*21220121222*11222 —42
Welsh, 30.....1112111211112112111201212211121122*1122111121222222—48

No birds: Midget 2, Hunter 1, Dolan 1, Welsh 1.

A 25-bird match followed the big match between Dolan and Midget, Dolan winning by killing 24 to Midget's 21. The score follows:

Dolan, 30.....2211112121212122121212121*1—24
Midget, 28.....1222212*12*2212*111212110—21

Dec. 10.—Several of the members of the South End Gun Club, of this city, held a practice shoot to-day, good scores being made. The scores follow:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

The management of the big Reading handicap, to be held at Reading, Pa., Wednesday, Jan. 18, 1899, has decided instead of having class shooting, have the prizes go to the three high guns, if not over sixteen entries are received, and if seventeen entries are received have four high guns..

The Reading handicap is at 25 live birds, $10 entrance, birds extra, $150 guaranteed, $75 to first, $50 to second, $25 to third high guns. If two entries are received over fifteen then $20 will be added to fourth high gun, after which all the entrance money will be added, 40, 30, 20 and 10, to the above prizes. Handicaps from 26 to 30yds. Entries should be sent to Arthur A. Fink, manager, 426 Franklin street, Reading, Pa., and should be accompanied by $2.50 forfeit. Entries close Jan. 17, after which shooters can enter up to 12 A. M. on day of shoot, but will have to shoot scratch or 30yds.:

The event will be held at the Stony Creek shooting grounds, easily reached from Reading by taking the electric car with the red flag going east on Penn street, and runs direct to the grounds. These grounds are new and are well adapted for live-bird shooting. All shooters are invited to enter, no person barred. Any information wanted can be had by addressing the manager, Arthur A. Fink.

Norristown, Pa., Dec. 10.—The University of Pennsylvania Gun Club, of Philadelphia, defeated the Penn Club, the crack organization of this town, by one bird, on the locals' field to-day. Both teams were remarkably weak on this occasion. Each man shot at 25 bluerocks. The score was as follows:

Penn Club—J. R. Yost, captain, 14, Cassell 19, Jenkins 15, Franklin 16, Ritter 15, Smith 23, Dotterer 10, Johnson 18,—149.

University of Pennsylvania—Parish 15, Nealson 19, Singer 21, Paul 19, Weaver 12, Swain 14, Freed 20, Baldwin 11, Steele 19—150.

West Chester, Dec. 8.—The Florist Gun Club, of Philadelphia, defeated the West Chester Gun Club to-day in an interesting match on the home grounds this afternoon, this being the deciding match of a series of three. Scores:

Team shoot, Florist vs. West Chester, 25 targets per man, teams of eleven men each:

Florist—Engle 20, Reid 20, Ball 16, Landis 22, Jones 10, Harris 17, McAhee 20, Dorp 16, Cartledge 23, Bell 21, Anderson, captain, 22—207.

West Chester—Devoe 17, Peters 20, Sellers 19, Griffith 19, Lumis 15, Green 18, Hoar 16, Ford 21, Brinton 13, Torp 19, Foulke, captain, 21—198.

DUSTER.

Kling—McKann.

ST. LOUIS, Mo., Dec. 3.—The Elliott-Smith match was to have been shot here to-day, but was postponed on account of the illness of Elliott. Kling and McKann shot a match at 50 birds for the price of the birds, which resulted as follows:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

Audubon Gun Club.

BUFFALO, N. Y., Dec. 8.—Following scores are from the Audubon Gun Club's regular club shoot. No. 3 was the club badge shoot. Warren, C. S. Burkhardt and B. Talsma tied for Class A badge; Warren won in shoot-off. E. N. McCarney won Class B, and U. E. Storey won Class C. The attendance was small to-day, owing to the stormy weather. After the club programme was shot to-day there was a match shoot at live birds between R. H. Hebard and E. C. Burkhardt, conditions of which were 25 live birds, 27yds. rise, use of one barrel only. The race was very exciting throughout, and was won by E. C. Burkhardt, who scored 19 dead to 17 for Hebard. The feature of next Saturday's shoot will be the R. H. Hebard event.

At a special meeting of the club, held at their club rooms Saturday evening, the date was fixed for the New York State shoot of 1899, which will be held under their auspices; the date chosen was the week of June 7.

CHAS. J. MOYER.

Yachting.

APROPOS of the recent discussion as to the capabilities of small yachts, there is probably no other question in yachting which is so generally misunderstood as that of the value of overhangs vs. plumb ends. In the course of the discussion which we reprinted from the Field, all shades of opinion have been expressed for or against overhangs; the arguments in most cases being based on very insufficient premises. The main trouble is the lack of any recognized standard for the comparison of size or bulk, in default of which most yachtsmen resort to either load waterline or over all length as the one true basis. Whatever standard may be the proper one for racing yachts, when it comes to cruising no mere length measurement is of any value. Probably the best standard for the comparison of size of cruising craft is the actual bulk of the hull below the deck, not mere displacement, but including top sides as well as under-water body. The letter of Mr. H. K. Wicksteed, published last week, is in our opinion the best discussion of the overhang question which has yet appeared. To us the matter of designing a seagoing vessel of any given cubic capacity is really a simple one. The essentials are first moderate proportions of beam and length, good depth if the waters allow it, and ample displacement. With the midship section resulting from reasonable beam, depth of hold and displacement, the amount of overhang at each end is practically self-regulating through the bow-buttock lines; these carried out fairly and naturally will give in almost every case a form well fitted for seagoing. The designer should not be cramped on the one hand by the necessity of cutting off the ends square to fit a fixed over all length, nor on the other should he be compelled to force the buttock lines into long flat and weak overhangs. By the method here outlined, he can produce, on a given cubic capacity, a vessel of good proportions, and of a graceful and natural form; well fitted to ride a sea. Of all types adaptable to seagoing use, the one pointed out by natural selection is the double end whale or surf boat type, with moderate overhangs forward and aft.

By Candle Light in New York.

Owing to an accident to city gas mains, and a consequent stopping of the type machines, several articles in this issue have been put to press by candle light with proofs uncorrected.

Long Island Sound Y. R. A.

special general meeting of the Y. R. A. of Long Island Sound was held on Dec. 12 at the Windsor Hotel, New York, to hear the reports of the executive committee in the matter of scantling regulations. There were present representatives of eleven clubs out of the twenty-two composing the Association. The report, as given below, was read and adopted, being favorably discussed, but it was decided to submit it to the Association before final action. The tables accompanying the report will be printed and sent out at once, and a general meeting will be held on Tuesday, Dec. 20, at which final action will be taken. As this is a very important matter ,it is desirable that every club be fully represented at the meeting, which is open to all individual members of the Association, as well as to the representatives.

Special Report of the Executive Committee, Dec. 12, 1898.

At a special general meeting of the Yacht Racing Association of Long Island Sound, held on Nov. 3, the following resolution was adopted:

Resolved, That the executive committe be instructed to prepare a scheme of restrictions as to scantling, construction, etc., for all classes from 30ft. downward, to the end of establishing cruising classes as distinct from racing classes, and that the committee shall report to a special meeting of the Association at the earliest possible date.

A special meeting of the committee was held on the following Monday, and meetings have been held regularly every week up to the present time; while specific portions of the work have been intrusted to different members, to be done by them in the intervals. In the absence of the chairman, Mr. Cromwell, Mr. C. E. Pierce was chosen acting chairman, and Mr. C. H. Crane appeared as proxy for Mr. Cromwell.

In undertaking this task the committee is fully impressed with the importance of the work at the present time. During the past two seasons there has been very little building in the regular classes of the Association, and but ilttle racing; this condition being due to two distinct sets of causes, those directly pertinent to yachting, and those foreign to it, such as the war and the general condition of business. There is now every promise of a change for the better in these external conditions, and of a strong reaction in yachting from the dullness and depression of the past season; and if a reasonable amount of improvement can be made in the immediate conditions affecting building and racing, a new era of active sport may be looked for.

The first question confronting the committee was that of the amount of consideration to be accorded to the existing fleet in framing new rules. On the one hand, the futility of marring new legislation by compliance with the demands of old and outclassed yachts has been demonstrated time without number; and on the other it is evident that under the most favorable conditions it cannot be expected that new classes will be built up in one or two seasons. For the coming season at least, the clubs must depend on the yachts already built rather than on those which may be built, for ful lentry lists.

While the first effort of the committee has been toward the improvement of yachts yet to be built, it has at the same time endeavored to make all changs as easy as possible for the owners of existing yachts; and to afford to them as many inducements as possible to resume racing.

An examination of the Sound fleet as it exists to-day, outside of the special classes, will show that the "vested interests' 'are represented almost entirely by yachts that are both outclassed in measurement and so far below a fair standard of modern design and construction as to have no longer a chance of success against a yacht just built to the limit of the class, even though it be a wholesome and well-constructed craft, and not a racing machine.

In accordance with the sentiment expressed at the general meeting, the committee determined at the outset to arrang the racing fleet in two divisions, one to include yachts built exclusively for racing, with the object of developing the highest possible absolute speed in each class; the other to include yachts which, while as fast as possible, and fully capable of affording exciting sport, shall at the same time be strong enough for safety under all conditions, and for a permanent life of some years; and also fitted in dimensions and general arrangement for all-round use in everyday sailing and cruising rather than for match sailing alone.

It is not the intention of the committee to suggest such legislation as will make slow yachts win from fast ones; but rather such as will draw a fair line between extreme speed, regardless of all other qualities, and such a high speed as may be had to-day with good design and construction in a vessel that honestly deserves the name of yacht. That this is perfectly practicable is shown in the success of the Boston knockabout class, in which yachts built under wholesome restrictions are not only far removed from the "tub" cruiser, but are second in speed only to the latest racing machines.

The name "racing division" naturally suggests itself for the unlimited racing yachts; but thus far no suitable term has been suggested for the other; and the committee has been forced to resort to the use of the inadequate one of "cruising division" until a better one may be found in some one word, which will express the idea of a fast but serviceable yacht, adapted for the joint ends of class racing and general use.

As a practical starting point in establishing rules and classes for the latter division, a list was made out of the yachts which have raced in the regular classes on Long Island Sound in 1897-8. This list, in which are not included the special 30ft., the knockabout and the 20 and 15ft. Seawanhaka classes, numbers about 100 yachts of from 36ft. R. M. down to 20ft. Of these, but half a dozen were built within the past two years, and hardly more than a dozen can be classed as up-to-date, and with a fair show of winning in their respective classes. Most of the mare outclassed in measurement, and only start when they find a few of their own kind at the line, and they would no tstart if confronted with a new yacht, even though she were of wholesome type and construction.

As the classes have gradually grown up on the Sound, there are now a number, but many of them with very few yachts. It is evident that successful racing depends on exactly the reverse of these conditions, viz., a moderate number of classes and a large number o fyachts in each class. With the above mentioned list as a guide, the committee has endeavored to build up and strengthen those classes, which have proved their popularity by the number of yachts built to them; and on the other hand, it is recommended that such classes as now exist on paper, but which can show no better reason for such existence than a few outclassed yachts, be discontinued.

Before taking up the subject of scantling in detail of parts and sizes, it was obviously necessary to settle upon the classes to which the proposed restrictions should apply. The present classes of the Association are 30ft., 25ft., 21ft. and 18ft. by the Seawanhaka rule; the latter two having recently been changed from 20ft. and 15ft. respectively. It is now so generally recognized that this rule, including only two factors of speed, length and sail area, does not meet the requirements of modern yachting in producing a yacht of reasonably large displacement and accommodation, that the committee was reluctant to recomment its continued use as the basis of a new and very important step in yachting legislation.

The alternatives, as summed up and carefully considered, were three: 1st, to adopt for these classes the new rule in which girth is a factor, as recently adopted for the larger classes; 2d, to propose another new formula tending to produce yachts of greater displacement; 3d, to extend the system of arbitrary and fixed restrictions now in use in the knockabout classes to cover the regular classes.

The first alternative, the adoption of the girth rule, was rejected for the reason that from all that the committee has been able to learn of the opinions and wishes of the Sound yachtsmen, the new rule will not be acceptable for building in the smaller classes; and also its adoption would involve much labor in the remeasurement of existing yachts. The second alternative, of a new formula, is not practicable, as it would only further complicate the measurement question to put still another rule in opposition to the one just adopted ,and as yet untried in the larger classes.

At one point in its deliberations, the committee had practically decided upon recommending a system of restricted classes in the cruising division, and the details of the necessary restrictions were carefully discussed. Mr. F. B. Jones visited Boston on behalf of the committee, and was present at the meeting of the executive committee of the Yacht Racing Association of Massachusetts, while similar restrictions were under consideration. It was proposed to establish classes with fixed limitations to waterline, sail area, ballast, and other of the more important factors of advantage, with more stringent cabin restrictions. One advantage of this plan would be that the special knockabout classes of 21ft. and 25ft. l.w.l. could be assimilated with the regular classes, thus much simplifying the racing and producing fewer and stronger classes. It would also be of mutual advantage if the two associations of Boston and New York could be drawn more closely together through increased uniformity of rules.

When it came to the question of actual details, it was evident that to secure satisfactory results in establishing the necessary maximum and minimum limits of ballast, beam, sail, etc., for both keel and centerboard types in the same classes, was a task that could only be dealt with by experts, who would devote much time and labor to it. Apart from there being no one at hand to do this work voluntarily, the necessity for immediate action, and the length of time required for the preparation of such a scheme of restrictions in addition to the scantling, made it impossible to carry out this method.

As a last resort, the committee has been compelled to recommend the retention of the present rule, as involving the least possible disturbance to racing. There is good reason to anticipate a general revival of yachting in the season of 1899, in which racing will have its share. Any material alteration of the rules is certain to have a deterrent eect on the racing for the following season, and under present conditions might lead to a repetition of the experiences of the past year.

If it had been possible to find a new rule of any kind which promised positively to attain the ends generally recognized as desirable, the production of yachts fitted for both racing and general use, the committee would not have hesitated to recommend its adoption, at whatever temporary cost. The three alternatives alrady outlined are at best but experiments whose success is doubtful, and each of them involves a serious disturbance of the familiar measurements, class limits and methods which is certain to operate disadvantageously at the present time in confusing yachtsmen and discouraging entries. In retaining the old rule, all this, at least, is avoided; and there is also good reason to anticipate that the new measures here proposed, the isolation of the extreme racing yachts, the imposition of scantling restrictions, and the revision of the cabin requirements, will all act strongly to improve the type built under the rule.

The committee then recommends the following classes by the present rule.

Cruising Division.

Sloops, Cutters and Yawls.—Cabin—30ft. class, 25ft. class. Open—21ft. class, 18ft. class.

Catboats.—Cabin.—30ft. class, 25ft. class, 21ft. class.

In order to qualify for any of these classes a yacht must conform to the standard Table of Scantlings and to the Cabin Restrictions.

A yacht which does not comply with the scantling and cabin restrictions may sail in the racing division of her class, under the above class limits.

In view of the possible objection that by this plan the number of classes and prizes is doubled, it may be pointed out that there is very little probability of both divisions of each class filling. A fair trial of the unlimited racing division and the restricted cruising division, side by side, is likely to prove that but one of them will attract the favor and support of owners. While it will be desirable for the present to offer prizes for yachts in each division in a class, when they come to the line in such numbers as to justify it; the matter is after all a mere question of the survival of the fittest, which may be left to settle itself.

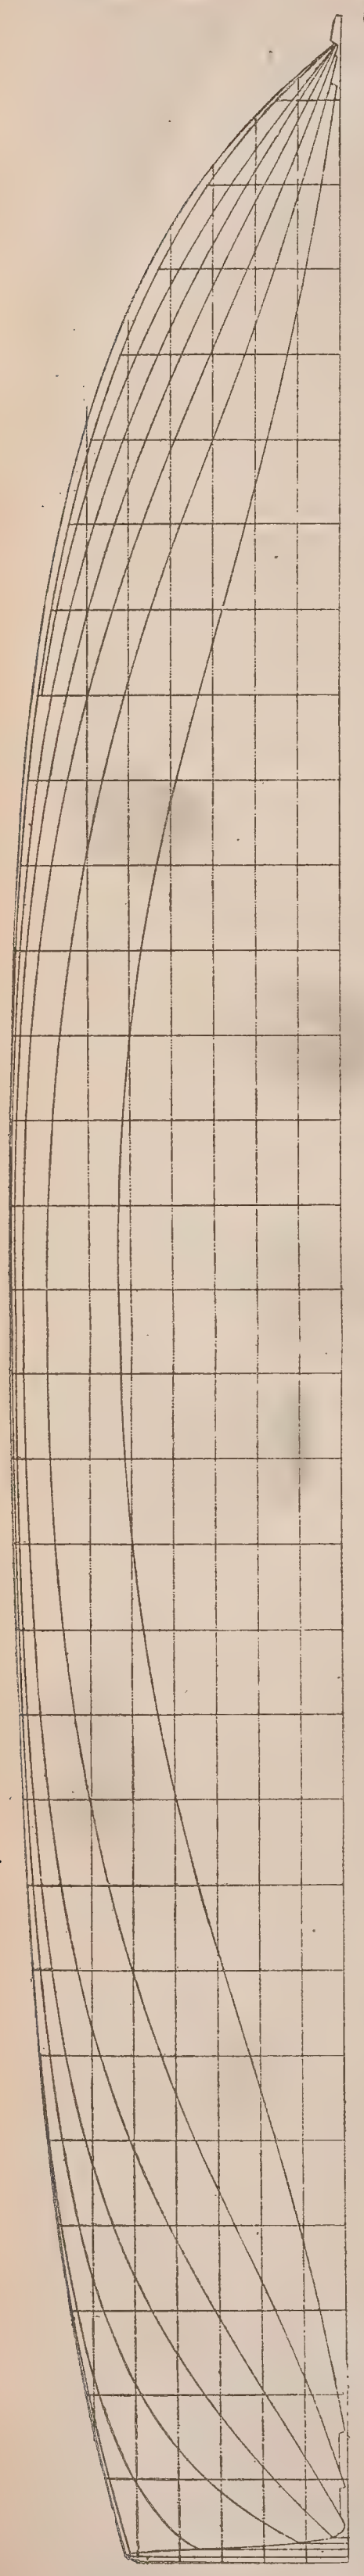
In taking up the question of construction, the committee referred at the start to the work done last year for the Yacht Racing Union of the Great Lakes, by W. P. Stephens. The conditions and the end in view were practically the same as in the present case; from such information as the committee has been able to obtain, the table has proved satisfactory, and it is approved by such designers as have had occasion to become familiar with it. The compilation of a new table would involve a great deal of labor, and would inevitably delay matters for some weeks more; and under the circumstances the committee is well satisfied to recommend this table to the Association. At its request, Mr. Stephens has revised the figures to fit the altered class limits recommended in this report, which are different from those of the lakes, and they have been extended to cover the smallest class.

The dimensions as given in the table are based on actual practice, as shown in modern yachts of good construction; and it is believed that they represent as fully as possible a desirable point of compromise between lightness and strength. In laying down restrictions of this kind, while it is desirable to avoid unnecessary complication, it is at the same time absolutely necessary to specify every essential. In order to carry out the intent of the Association, as expressed in the resolution, and to protect to the fullest extent those who build honestly in this spirit, it has seemed necessary to approach the extreme of complication, rather than the reverse, of few and simple requirements, which may be filled literally and at the same time evaded in spirit.

The Committee recognized fully that a table of this kind is based on an assumption which is by no means correct viz., that the same dimensions and disposition of parts are equally applicable to all types of yachts. On this point it may be said that, as it is manifestly impossible to arrange special tables for each possible type; the present one has been based mainly on that general type which has always been largely in the majority in the cabin classes, the moderately wide and deep keel and centerboard.

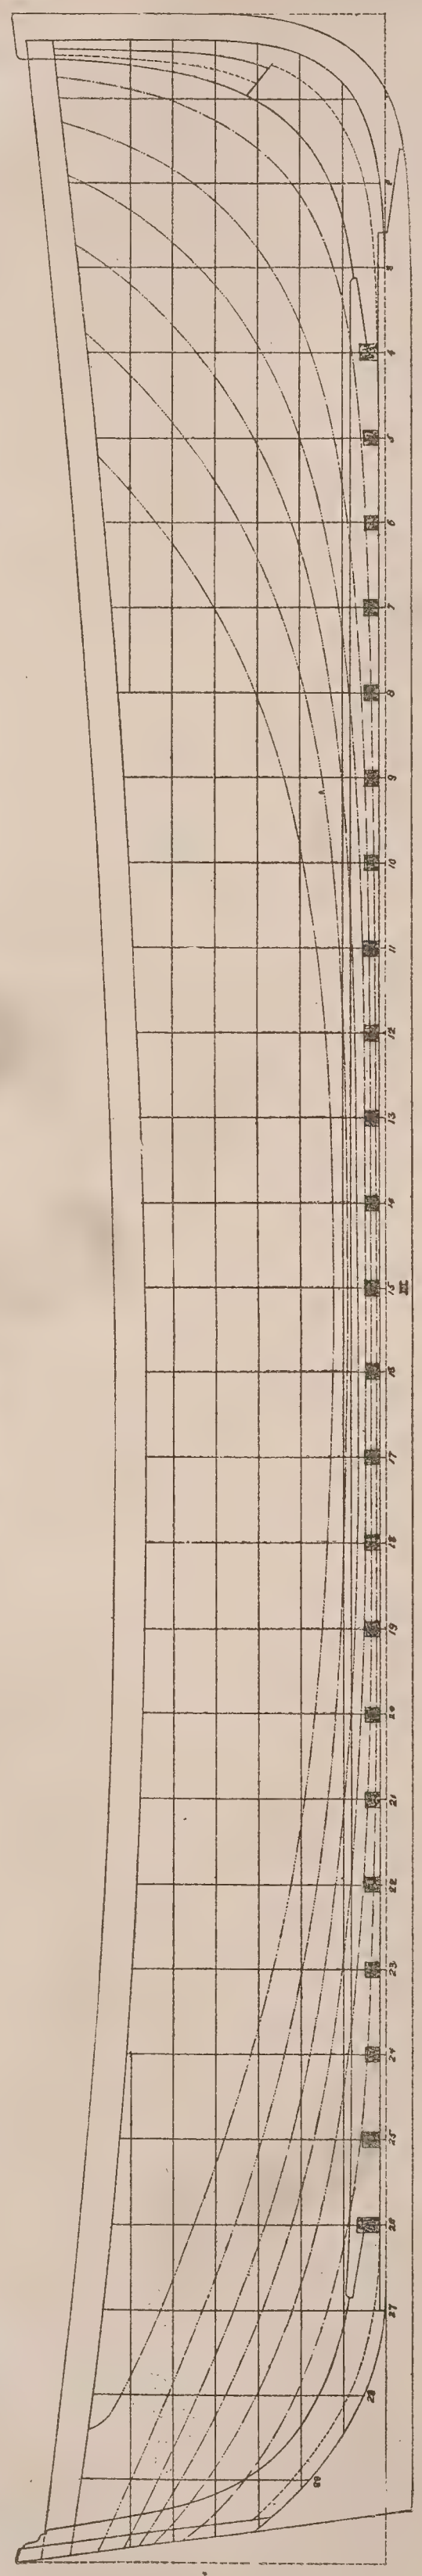
Assuming that the table is correct as far as it goes, there are several secondary points connected with it. In the first palce, there will be found some existing yachts whose scantlings do not comply with those laid down, but which are of heavy construction and ample strength as tested by use. These should be admitted to their proper classes. It may in time prove necessary that some provision be made for an inspection of yachts under contsruction, in order that some provision be made for an inspection of yachts under construction, in order to guarantee that they are built in accordance with the table; and also to take some means to ensure that after being thus built, yachts shall be maintained fully up to the required standard. It would obviously destroy the entire effect of the rule if a yacht after her first season were allowed to plane down her deck and planking and to cut away other members to gain an advantage in weight.

There will in time be the question of approved methods of construction other than the particular one dealt with in the present table, such as steel, aluminum and composite. In the opinion of the committee, the work which it now presents, though all that has been possible at the present time is but the beginning of a very extensive scheme, which can only be perfected by continual care and labor in the future.

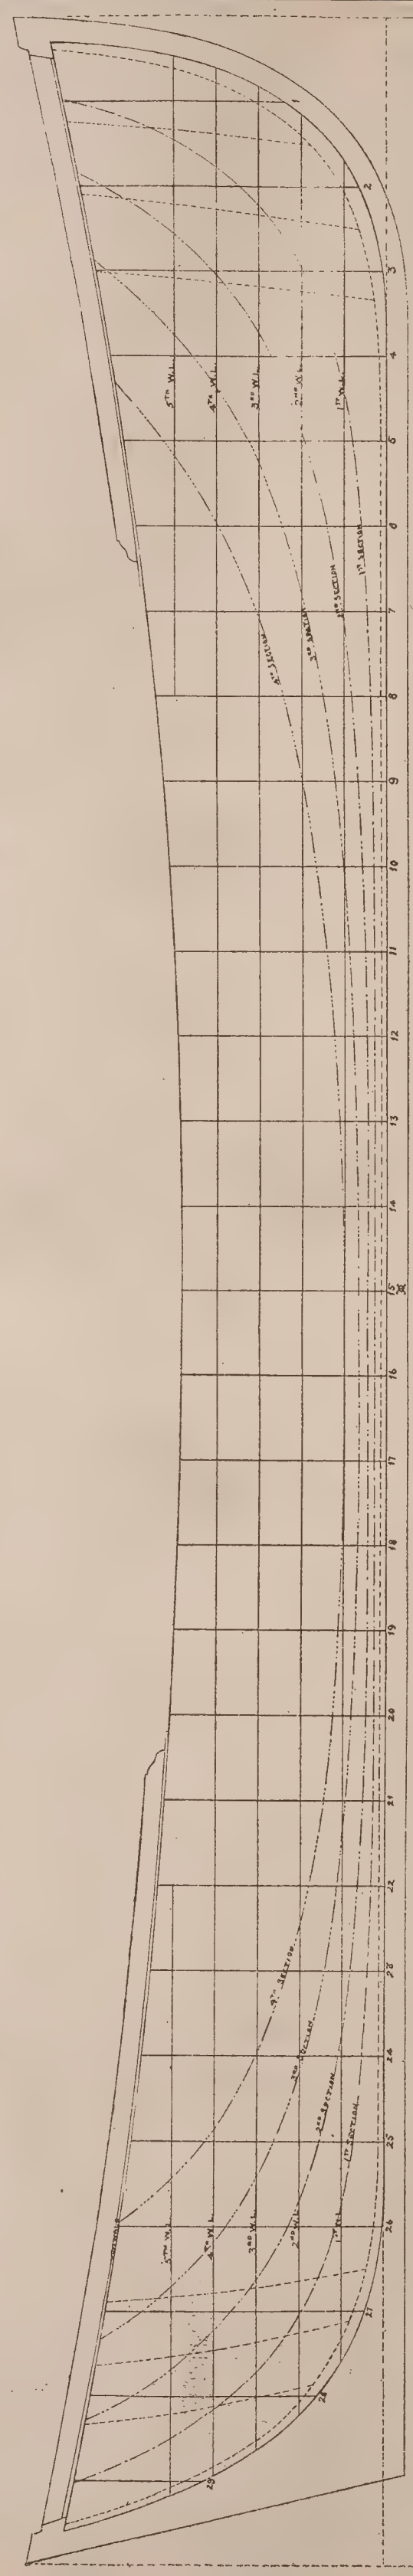


The two subjects of the restriction of the Knockabout classes and the cabin requirements for the regular classes have been carefully considered, and the committee presents new limits which it considrs desirable. They have ben drawn as far as possible in conformity with those of the Y. R. A. of Massachusetts, which has, with the Boston Knockabout Association, given much attention to these matters.

At the general meeting of Nov. 3 the Association voted to adopt for the classes of 34ft. and over the rule recently adopted by the Yacht Racing Union of North America. At the present time there is a decided difference of opinion as to the merits of this rule in producing a yacht of greater internal capacity than that of late resulting from the old rule. This question can only be settled by the practical test of designing and building and racing under the rule; and it is highly desirable that such a test be made at once. The new 36ft. class offers a most favorable opportunity for such a test, and the committee would urge that every effort be made by the clubs of the Association toward building up this class for the coming season. The class permits a yacht of about 30ft. l.w.l., of any type, from the cruiser of full section to the fin-keel, according to the preference of the owner. It is as yet very far from certain which type will win, or in fact whether any one type will win in all conditions of racing. Those who desire to build a yacht of some living accommodation and yet to race her regularly, can find in this class at least a good fighting chance. In order to induce the building up of this class, the committee has extended the table of scantling to include it; so that those building may at least be sure of a strong and durable yacht with a permanent sale value, and not a mere racing shell. The cost of building a 36-footer, even for a first-class craft, is by no means excessive; if the class is taken up in time by the Association and the clubs, there will be a certainty of good class racing through the next season; and until more is known of the practical working of the rule, there is at least a fair sporting chance of prizes for each type of yacht.

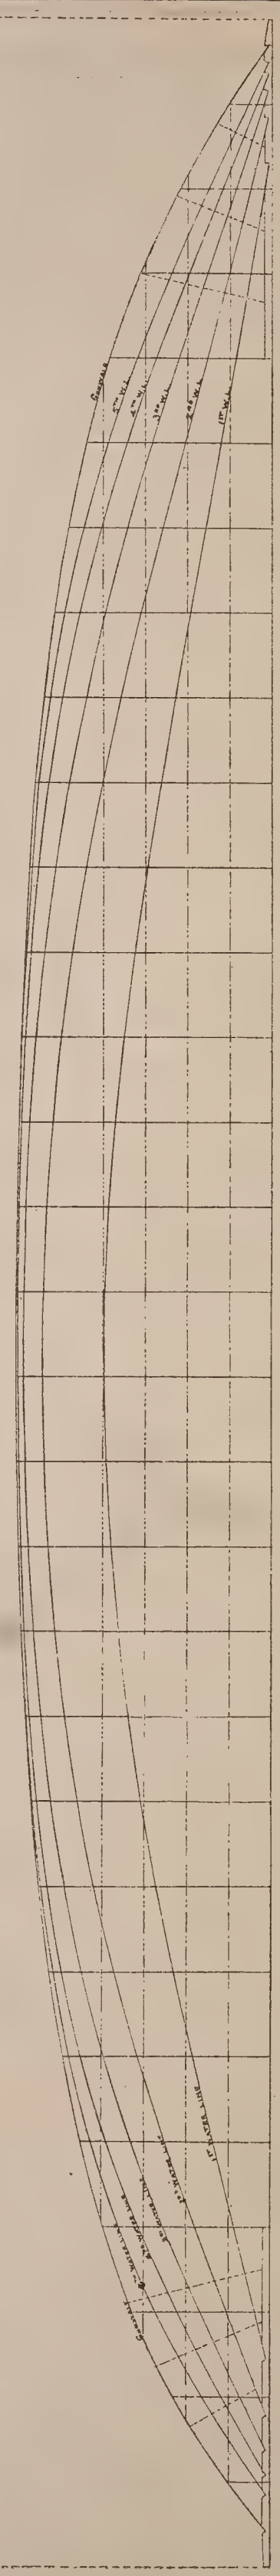


It may not be out of place to say that any early premonitions on the part of the committee as to the amount of the work involved in carrying out the resolution of the Association have been more than realized; and at the same time the committee cannot feel that it has been able to complete the task in a manner which is thoroughly satisfactory to itself.



The committee is impressed with the truth that the results of legislation are not of necessity dependent entirely upon the actual details of the laws, but upon the spirit with which they are accepted and obeyed. There is, at the present time, a geneal desire to establish yacht racing upon a more satisfactory basis than it has occupied for some years past. Whether this can be done depends not alone on the rules, but on the spirit of the yachting community. If the yachtsmen of Long Island Sound will individually accept the rules and display a proper sporting spirit in building new yachts or racing their old ones if at all possible next season; and in the endeavor to improve and strengthen the rules by interpreting them in the spirit of true sport, rather than in destroying them by at once pushing them to the most extreme limit of the letter, the results can hardly fail to be satisfactory, both in the present and the future.

Respectfully submitted, C. T. PIERCE, Acting Chairman C. P. TOWER, Sec'y, E. BURTON HART, F. BOWNE JONES, O. CHELBORG, W. P. STEPHENS.



THIRTY-FOOT CUTTER.

THIRTY-FOOT WHALEBOAT GIG.

The Standard Navy Boats.

By Arthur B. Cassidy, Esq , Member Society Nav. Arch. and Marine Eng.

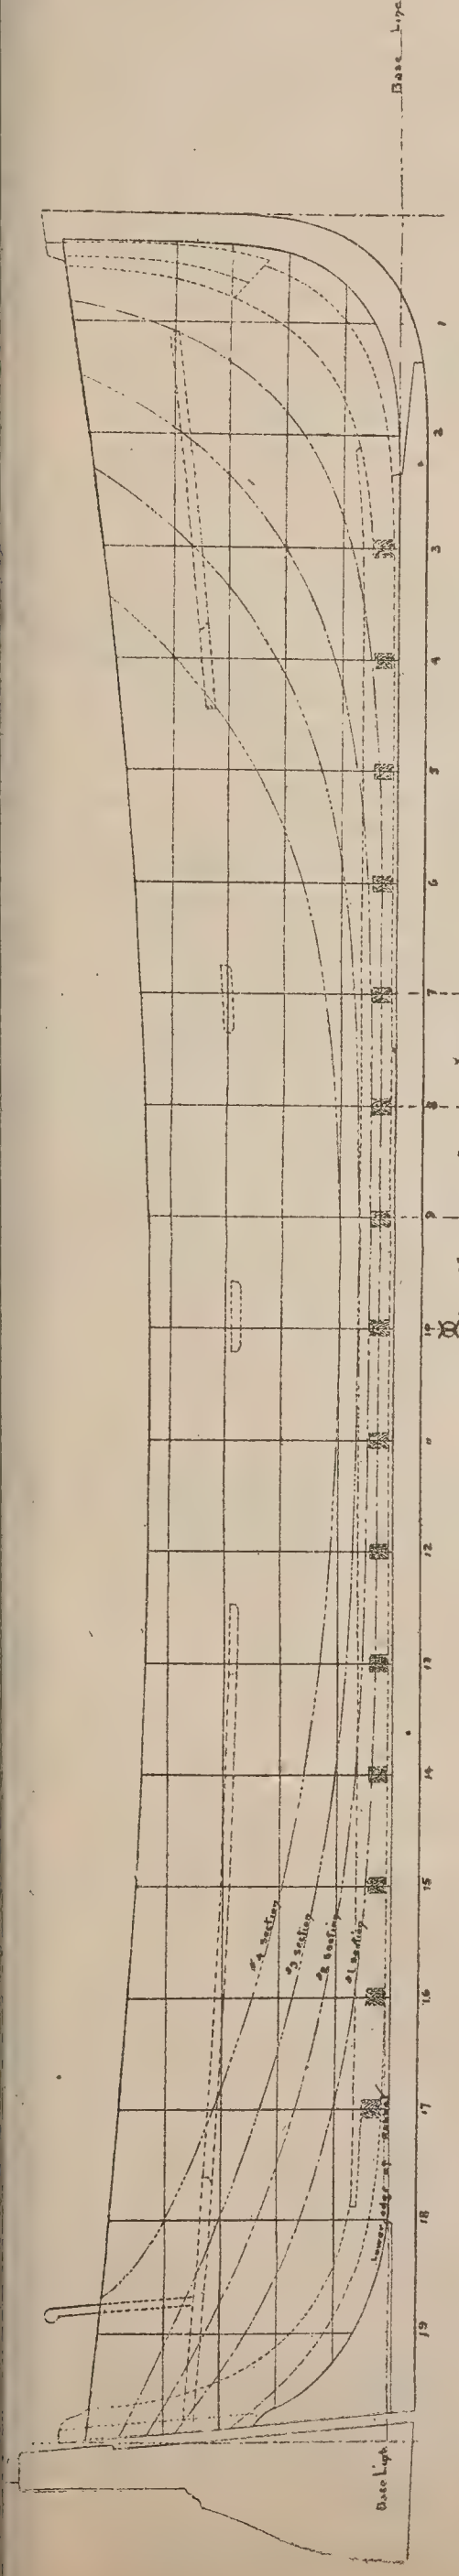
The design of small boats for the navy has been a problem which the naval constructors have been obliged to solve under circumstances somewhat similar to those affecting the designs of ships for the special purposes intended, and under many conflicting and limiting conditions.

The necessities of special cases of boat design are illustrated by the dory of the New England fisherman, a light, handy craft of good freeboard and great carrying capacity. The average "banker" carries about a dozen dories, snugly nested by removal of the thwarts. Each boat is handled by two men, and will carry on a draft of 12in. from 1,500 to 2,000lbs.

The New Bedford whale-boat, famous for its speed, lightness and capacity. is an easy pulling boat, with considerable sheer and sharp lines. The bow and stern are alike, so that the boat will work quickly in either direction, and there is considerable curvature in stem and stern post, so that it can be turned quickly by the boat steerer with his long steering oar, and thus escape the fury of the whale. The boat is usually fitted with a small sail and centerboard, carries a crew of seven or eight; five or six at the oars, a boat header and boat steerer, with all the necessary gear, harpoons, lances, tubs containing whale lines, etc. Each whaler usually carries about two spare boats, and in her complement of boats has more than enough capacity to easily carry all the crew.

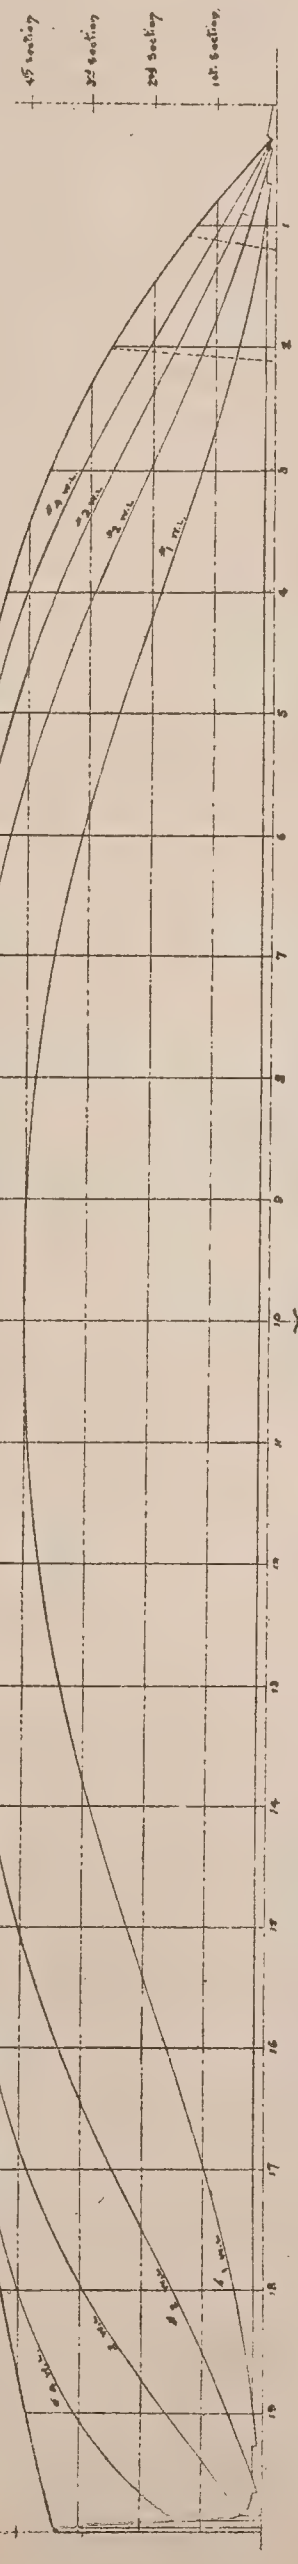
The surf boat is one with great sheer, full forward and after body, quick rise of keel forward and aft. A surf boat that has received great praise in the navy is the Ranger boat, built at Mare Island, for use on the survey of the coast of Mexico and Central America.

The racing cutter or barge, built sharp and light as possible, is intended for racing in smooth water.

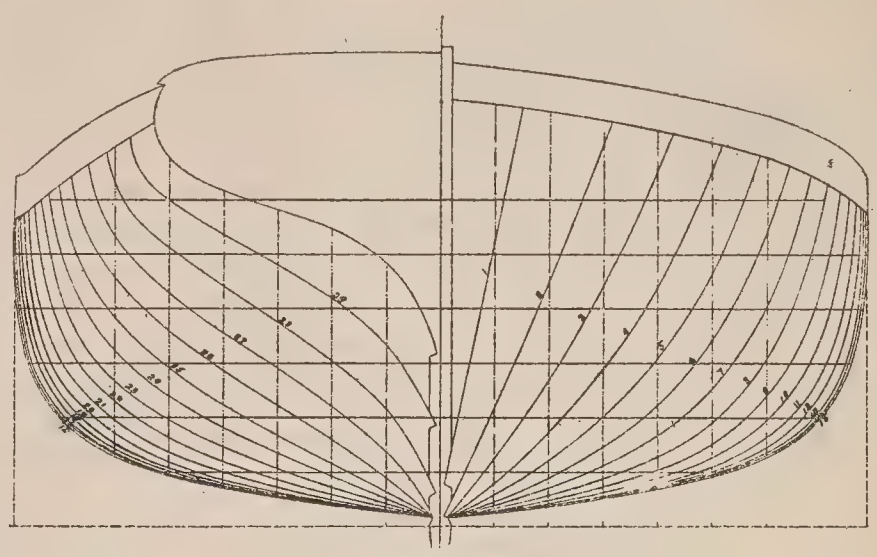


The light steam and naphtha launches, which are so popular along our coast in sheltered waters, are built as light as possible, and with their limited crew serve their purpose admirably as pleasure craft in smooth water.

In each of the cases cited the boat fulfills its purpose, but would be comparatively worthless if its use was attempted in any other class than that for which it was intended.



As in each of the above mentioned cases, so in the navy, must the boats be designed for their specific purpose. They must be strong enough to stand rough usage in rough water. They must be stable under sail or oars, have great carrying capacity, and must be as light as is consistent with the necessary strength. The steam cutters must have the power and strength of construction to not only carry their own load of officers and men, ranging from 60 in the 40ft. steam cutters to 35 in the 28ft., but must be able to tow all the other boats of the vessel, loaded to their capacity.



As the usual space on naval vessels for the stowage of boats is limited, the number of boats that can be carried is also limited, so that in abandoning ship, when each man has his allotted place in a boat, there is not much spare room, as the boats, besides their human freight, must carry the requisite amount of provisions and water. Then

again, in landing parties, the men and equipments make a heavy load to carry, possibly through surf, to the shore, and with the banging upon the shore require good, solid construction to stand the strain.

It is impossible to make the boats, in all their details, satisfactory to every one, but it is believed that the present types, which have been adopted as the standard of the navy, more nearly fulfill all requirements and are more satisfactory to the majority of naval officers than any previous designs. These standard boats are not of an immediate growth, but are the result of experience of many years of actual service, and much time and thought by many men.

An order was issued by the department April 1, 1870, relative to establishing uniformity in the size of boats. The vessels were classified, and a table prepared by Mr. John Lenthall, then Chief Constructor of the Navy, giving the size of boats that should be carried by each vessel, and also establishing the proportion of breadth and depth to the length, ranging from .282 of the length for breadth, and .4 of breadth for depth in launches, to .21 of the length for breadth and .39 of breadth for depth in whaleboats.

While this classified the boats as far as principal dimensions were concerned, there was no limit to the form of the boats, and in many cases the desire of the commanding officers, to have their boats faster than the boats of some other vessel, led to the construction of some tender boats entirely unfitted for naval use.

When it was determined by the present chief constructor to standardize the boats, the best boats in use were selected as the basis of the designs; the boats were studied for improvements, and the opinion of many officers afloat was sought.

One point upon which all were united was, that the boats should have more carrying capacity. The principal difference of opinion was on the question of rig; about 75 per cent. of the officers were in favor of the sliding gunter; the remainder in favor of the standing lug.

In the compilation of the standard designs, the classes were first determined. The classes and principal dimensions are shown in the accompanying table:

PRINCIPAL DIMENSIONS AND WEIGHT OF STANDARD BOATS OF THE UNITED STATES NAVY.

	Principal Dimensions.			Weight.	
Type of Boat.	Length extreme. Ft. In.	Breadth extreme. Ft. In.	Depth* from top of gunwale to lower edge of rabbet. Ft. In.	Hull. Lbs.	Total including outfit. Lbs.
Steam cutters	40.00	9.00	4.7½	8,064	10,642
	36.00	8.09	4.06	7,148	15,719
	33.00	8.07	4.05	5,120	12,768
	30.00	8.00	4.02	4,763	10,631
	28.00	7.08	4.00⅞	3,692	8,889

	16.00	4.06	1.10	291	617
	14.00	4.04	1.08	286	537

*Note.—In case of Steam Cutters this heading should read—Depth from top of deck to lower edge of rabbet.

The essential qualities of a design for naval boats should be classed as follows: 1st, safety; 2d, weight; 3d, comfort; 4th, speed.

In order to secure the first element, safety, the boat must be of such form as to give stability, both under oars and sail. It must have strength to stand the strains of heavy weather, the rough usage which they sometimes receive when being hoisted and lowered, and must be able to stand considerable banging against the vessel, the wharf, or a float, and the shock of grounding on a beach when landing with an expedition. The boats should have capacity to carry, in addition to their regular crew and stores, as large a number of men as possible, and they must have the form and a sufficient freeboard to be weatherly under sail in rough water, and to be able to carry as dry as possible her crew, the additional number of men allotted to the boat in abandoning ship, and provisions and water for her complement. The capacity in men, weight of provision and water, and the freeboard of the standard boats, is as follows:

Type of Boat.	Maximum number of men boat will carry.	Weight of provisions and water.	Freeboard with maximum number of men and provisions.
		Lbs.	Ft. In.
Steam cutters	40.00	60	600	1.09¼
	36.00	53	530	1.09⅛
	33.00	48	480	1.09¼
	30.90	40	400	1.08⅝
	28.00	35	350	1.07⅝
Launches	33.00	64	640	1.10¼
	30.00	50	500	1.09¼
	28.00	40	400	1.01¼
Cutters	30.00	45	450	1.04
	28.00	40	400	1.02¾
	26.00	30	300	1.00
	24.00	28	280	1.00
Barge	30.00	38	380	1.00⅛
Whale-boats	30.00	28	280	1.01¾
	29.00	25	250	1.00⅜
	28.00	22	220	1.01⅜
	24.00	18	180	.....
Gig whale-boats	30.00	20	200	1.02½
	28.00	16	160	1.02½
Dinghies	20.00	12	120	1.02¼
	18.00	10	100	1.00½

As the boats must be strong, and scantlings made as light as possible, careful workmanship is insisted upon, in order that all the parts of the boat may be properly joined together.

While it is not intended to encourage extravagance, it is insisted that every appointment shall be strong, neat, and symmetrical without regard to expense.

The practice is to have all frames made of white oak, steamed and bent. In many cases where these frames have been made from flitches, or the natural crook, they have not stood the strain of a sudden shock, have broken from the blast of a gun, or the swinging of the boat against the vessel or wharf.

The keels, stem, sternposts, keelsons, frames, risings, footlings and wash strakes are built of white oak, the plank of white cedar, the thwarts of white ash, and the boats are copper-fastened throughout. The hanging bolts are of galanized iron, and are strongly riveted over washers or plates in the stem, keel, or stern-post. All metal fittings of the boats are of brass.

A change has recently been made in the stern benches, slatted seats being used in place of the flat bench, thus giving an easy shaped seat, similar to park benches, upon which a person can more easily sit when the boat is in motion, and also insure a comparatively dry seat at all times; it is also intended to replace the cumbersome cushions.

The barges and gigs are always finished in mahogany, the back board being curved and carved with an appropriate design.

The whale-boats and gig whale-boats are fitted with copper tanks under the bow and stern sheets, and at the sides under the thwarts, to make them better lifeboats.

The 30ft. whaleboat has a tank capacity of 14 cubic feet. The steam cutters are also fitted with copper tanks; the 40ft. steam cutter has, including a water-tight compartment at the bow, 62.3 cubic feet.

Of the fittings of the boats, the greatest difficulty has been with the detaching apparatus of lifeboats. Many kinds have been used, and failures to work at the proper time have been noted. The automatic releasing hook is now being largely used in the navy. By this appliance, the boat is under control from the deck, and is rapidly lowered, and automatically released as soon as the boat touches the water.

The second element of the designs is that ever present question demanding the constant attention of the naval architect—weight.

As previously stated, the scantling is reduced as much as is consistent with the necessary strength. The designs have been studied from three points of view—safety, strength, and weight, and wherever it seemed possible to cut the weight it was done.

In the systematic arrangement of the thwarts, the bow oarsman is located far enough aft not to be cramped in his movements, and also to give a large fore sheet for all necessary purposes.

The bows have a considerable flare to make them dry, and the lines are made as sharp as possible, keeping in view the capacity required.

Under the third element of the boat designs—comfort—might be specified the slatted seats in the stern sheets of all boats except launches and dinghies. It has been the aim in the standard designs to give the crew of the boat ample room for pulling, and the thwarts have been arranged both vertically and horizontally to that end.

The element last to be considered in the navy boats is speed, and as the speed of a steam cutter is closely associated with space and weight, any attempt at anything but moderate speed could not be considered in a navy boat.

In rough waters, where the usual service of the boats would be performed, the speed ranges from eight knots in the 40ft. steam cutters to six knots in the 28ft. cutters.

Many of the crews of the old navy took a great deal of pride in their racing cutter, but in the new navy, where everything has to be well considered from many points of view, the racing cutter seems out of place. As the boats are standardized, and those of all vessels are alike, size for size, a boat race would become a question of strength and endurance, and be much more interesting than a race between two boats of unequal form.

Under sail, the boats will not be speedy, as the sail power has been purposely kept low to keep down the size of spars, and the weight of sails and spars.

In the steam cutters, the sail area is 1.75 times the area of the load waterline; in the launches, 3 times; in the cutters, whale-boats, and gig whale-boats, 2½ times; and in the dinghies, 2¼ times.

The sail area of each boat is given in the following table:

Type of Boat.		Sail area. Ft. In.	Area of load water line.	Center of effort from center of length. Ft.	Center of effort above base. Ft.
Steam cutters	40.00	372.04	212.08	on ⊠	14.58
	36.00	318.58	182.00	.127 aft.	13.5
	33.00	301.09	172.05	.046 "	13.46
	30.00	283.75	145.00	.27 "	12.64
	28.00	218.82	125.00	.207 "	11.77
Launches	33.00	505.05	168.05	on ⊠	15.04

	18.00	126.32	56.14	.354 aft.	9.67

The life of the navy boats is comparatively short, probably averaging ten years.

One hundred boats have been built during the past year, and there are now in use in the navy about 1,000 boats of all classes.

A number of designs have been selected to illustrate the type of each class, and are shown on plates 1 to 21, inclusive.

Gilberts Bar Y. C.

Waveland, Fla., Dec. 4.—The usual monthly meeting of the Gilberts Bar Y. C. was held on Dec. 3. The race was sailed over the usual course, with a variable west wind, the result being as follows:

First Class.

	Elapsed.	Corrected.
Albatross	1 32 44	1 32 41
Britannia	1 34 51	1 33 29
Penguin	1 33 23	1 32 33
Omega	1 33 51	1 33 51

Yacht Designing.

In spite of the favor with which the series of articles on practical designing was received by our readers, the pressure of much other work has prevented their resumption during the past year, as was originally intended. We take pleasure now in announcing that they will begin again in the first issue of 1899, and will continue as regularly as the work will permit. It is the intention to issue them in book form after completion in the paper. The portion of the subject which will be first taken up relates to drafting instruments, their practical use, and the elements of marine drafting.

YACHTING NEWS NOTES.

Barracouta, steam yacht, Edward Kelly, arrived at New York on Dec. 6, after a cruise to Porto Rico and other West Indian islands. She sailed from New York on Oct. 22, reaching San Juan on Oct. 28. The return trip began on Nov. 29, and on Dec. 4 a violent gale was encountered. The coal supply gave out before Sandy Hook was reached and the aid of a tug was required to reach the upper bay.

The Mianus Electric Co., of Mianus, Conn., is now, in addition to electrical supplies, building the Palmer gas and gasoline engines in various sizes for land and marine use. In connection with the hull department, the company building the complete yachts as well as the engines, it is now prepared to furnish frames for those who wish to build for themselves. The stem, stern-post, keel, timbers and floors are finished, fitted and marked, so that they may be readily set up after shipment. This will prove a great aid to those who wish to build, but have not the facilities for steaming, etc.

Canoeing.

The Western Canoe Association and the A. C. A.

Great interest among Western canoeists is evinced over the proposed absorption of the Western Canoe Association by the larger and older body, the A. C. A. The history of the W. C. A. for the past couple of years would indicate that it is not in an active and healthy condition. This is probably due more to the oppressively hard times of the past few years than to any other cause, but whatever be the cause the result is unavoidable and not gratifying. It must be admitted with regret that the prospect of improvement in the W. C. A. is but remote, and there seems to be quite a sentiment in favor of merging the Western organization in the older body. The following circular letter, issued by Secretary Huntington, of the W. C. A., covers these points fully. The vote is now in progress, and by the end of next month the future of the W. C. A. will be determined, one way or the other. The letter is dated at Milwaukee, Nov. 19:

A special meeting of the executive committee of the Western Canoe Association was held at the Great Northern Hotel, Chicago, Nov. 16, for the purpose of stimulating interest in canoeing and endeavoring to revive, if possible, the Western Canoe Association.

Commodore F. S. Thorne, of the American Canoe Association, and H. C. Morse, of the executive committee, and also vice-commodore of the Central Division of that Association, were present and made a proposition to have the members of the Western Association join the American Canoe Association in a body, the same to constitute the Western Division of the American Canoe Association.

Your committee have looked at this matter in all its phases, and it is their deliberate judgment that the best interests of the W. C. A. will be served by all its members joining the A. C. A. in a body, to be designated the Western Division of the A. C. A. This will give us all the advantages to be derived from connection with the A. C. A., while our present membership and affiliations will remain practically the same.

We ask you therefore to vote on the following propositions:

1. Are you in favor of joining the A. C. A. as a member of their Western Division and turning over to that division all our Association property, such as records, cups, cannon, flags, treasury balance, etc., said property to belong to said proposed Western Division only?

2. If not, have you any suggestion to offer looking to the revival of the W. C. A.?

Please vote "Yes" or "No" on each of these propositions and send same promptly to the secretary. According to Article 1 of our by-laws only those members whose dues are fully paid are entitled to a vote on any question; be kind enough therefore to remit your dues as per inclosed notice with your vote. The constitution and by-laws of the A. C. A. are much the same as our own organization, and the dues and initiation fee are the same, viz., $1 each.

Our executive committee at their regular meeting, to be held in Milwaukee, Jan. 21, 1899, will decide the matter of joining the A. C. A. in accordance with the replies received from our members. It is necessary therefore that every member should vote on these questions, and we ask your co-operation to the extent of an immediate reply.

The Executive Committee,
By F. B. Huntington, Sec'y.
397 Broadway, Milwaukee.

Approved: N. H. Cook, Commodore, Chicago.

Answers to Correspondents.

No notice taken of anonymous communications.

Carrier Pigeon NA 14695, Garden Prairie, Ill., Dec. 6.—Mr. R. O. Portee, of this place, in his barn yesterday found a carrier pigeon with the number NA 14695 on left leg and a copper band on right leg. I would like to hear from owner if he wants the bird. A. Gates White.

W. H. C., Ogdensburg, N. Y.—Will you be kind enough to tell me when deer shed their horns, and how long the velvet stays on? Ans. See article on this subject in our issue of Nov. 19, this year. In different parts of the country deer shed their horns at different times, ranging from December to February.

R. S., New Jersey.—1. Is this a good time of year to put out yearling trout? 2. Won't it be good policy to put small and big-mouthed black bass in a pond together? 3. What depth of water do bass require? 4. What depth do brook trout require? 5. Will trout and bass live together in peace? 6. Give the address of a reliable dealer in eggs, yearlings, etc. Ans. 1. Yes, from now until spring. 2. Yes; they often inhabit the same water, and if your pond or lake is not suited to the small-mouth the other will survive, as was the case at Cold Spring Harbor, Long Island. 3. From 6 to 20ft., with gravelly shallows to nest on. 4. From a shallow mountain stream to 20 or more feet. 5. If the water is good trout water keep bass, sunfish, chubs, and other fish out of it. Bass will destroy trout. 6. Consult our advertising columns.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 24, 1898.

VOL. LI.—No. 26. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

AMATEUR PHOTOGRAPHY.

THE FOREST AND STREAM'S announcement of prizes for amateur photographs is given elsewhere.

For his New Year gift send him the first 1899 number of "Forest and Stream," with his name on the address label showing subscription paid to January of 1900. The remembrance will renew itself weekly fifty-two times in the year.

CHRISTMAS.

GOOD wishes and a Merry Christmas to every reader of FOREST AND STREAM, wherever he may be. Those whom the fortunes of war have taken to Porto Rico or Manila will receive our gratulations late, but they are none the less cordial.

For this Christmas of 1898 is not as those which have gone before. In many a home throughout the land the empty chair is standing, and loving, longing thoughts are turning to the isles of the sea, where, obedient to his country's call, son or brother is doing his uncomplaining duty.

In all the festivities of the season FOREST AND STREAM has surely its part to bear, for Christmas, as we know it, is in a degree a celebration of outdoor life—an expression of the reverence for the forest felt by all peoples who dwell in northern climes. It replaces in large measure the ceremonial of those ancient worshippers of the North whose temples were the old oak groves, and whose yule tide festival it is. From the mysterious recesses of that forest those early people drew their subsistance, and it is not strange that the woods were sacred to them. Of the ceremonies and beliefs of that ancient time, and of that forgotten religion, not a few still persist in England, even though much of their meaning is lost. Nor is this survival confined to the old world, for when our ancestors crossed the sea nearly 300 years ago they did not leave behind the memories of this season, so that to-day all over the land, in anticipation of Christmas, we fare forth into the forests to gather and bring home trees and plants to adorn our houses; and like our skin-clad ancestors of old we choose those of living green to typify the new birth of nature with which another season shall beautify the earth.

To these primitive ancestors the time was a sacred one just as it is to us, or as it is to some of our Indians, who, when the winter god shows his coming by the first snow, hurry from their lodges to offer gifts to him and to pray for his favor. For, notwithstanding the name it bears today, Christmas is far older than civilization; and about the Christian festival that we celebrate cluster myths and customs and beliefs that have come down to us from the remotest barbarism.

To all the world Christmas may appear with a twofold meaning. By the Latin races it may be claimed by its date and by its customs as the old Roman Saturnalia under another name, while for the descendants of the northmen it is a scarcely less direct inheritance from one of the chief festivals of an ancient religion. But to the whole Christian world Christmas shines forth with a meaning deeper and sweeter than either of these, for it signifies the renewing of what is old and worn out and dead—a new life to replace that which is spent.

Welcome, then, Christmas; less for its light-hearted merriment and the fleeting joys which it brings to the young and to the thoughtless, than for that deeper peace which its promise offers, and which is felt most strongly by those whose blood is cool and whose steps are deliberate. For all it is a season of joy, and fittingly so, though for such different reasons.

Chief among the outward symbols of the Christmas day is the tree bearing its load of gifts. Each year more and more the forests are ransacked for straight young spruces which shall satisfy the demand for Christmas trees; and along the crowded city streets rumble great truck loads of these freshly cut evergreens, whose fragrance calls back to the tired dweller among bricks and mortar fresh memories of the snowy days of his distant boyhood on the old farm. Not long ago a protest was raised against the destruction of young trees for this purpose; but he who would remove the Christmas tree would labor in vain. Christendom will not do without its Christmas trees, nor should it be asked to. Let us preserve the trees, but let this be done in the right way—a beginning be made at the right end. A tree is but a seed grown up, and we may cut down our trees as we reap our wheat, if only we will plant seeds for new trees, even as we sow grain for another crop.

In a tree the primitive savage sees something sacred. Firmly rooted in the soil, it seems to him to be a part of the sacred earth. From it he gathers food which sustains him; to its branches he hangs offerings which he makes to his gods, and when our children gather about the Christmas tree, whose branches are bending under their burden of gifts, they are but expressing, though all unconsciously, that reverence for the tree to which their forefathers gave utterance—a feeling that is latent in all humanity.

The gifts of Christmas! Who can voice the deeper meaning which belongs to them? Who can measure the thought, the care, the labor and the sacrifice of self which their preparation has entailed? If to some they represent merely the lavish expenditure of money, to the vast majority of givers they signify so real a consideration for others, so true an abnegation of self, that the sum of these sacrifices throughout the civilized world is no more to be comprehended by us than is eternity or space. And if Christmas comes but once a year, and this general thought for others is but annual, we may not doubt that each year its influence on humanity grows stronger and farther reaching, and is each year surely leading the race to follow more closely in the footsteps of Him for whom the day is named.

SNAP SHOTS.

In accordance with its time-honored custom, the FOREST AND STREAM presents to its readers a budget of good things for the Christmas week. Of illustrations, we venture to say that nothing more acceptable could have been provided than the excellent portrait of Mr. Robinson. Many thousands of people have a very warm place in the heart for this man, who through so many years has contributed to their pleasure by the graceful fancies of his pen, his rarely vivid photographic word-picturings of nature, his mother-wit, and an unfailing store of tender sentiment, whose expression finds response in the wakened chord of many a soul. The Robinson of this portrait is Robinson the writer we all know, even though for many of us this may be the first picturing of the features of the man. If we might venture to supplement the toast proposed by Dr. Morris, it would be one to Awahsoose the Bear; and to it we should expect an universal response.

The photographs of leaping salmon, by Dr. Robt. T. Morris, constitute a remarkable series of pictures. The securing of them was an achievement of which one might well be proud.

The plan of acquiring territory on Long Island for a State deer park is an admirable one, and will be likely to commend itself to citizens throughout the State. But in its original suggestion of the game park project the FOREST AND STREAM had in view only the game interests; the enterprise was not recommended for the benefit of any holders of real estate who might have land which they would dispose of for the purpose at ten times its real value, sharing the common feeling that so long as the money comes out of the public treasury it is perfectly right to get as much of it as possible, without regard to the value of what is given in exchange. If the State shall acquire a Long Island game park, the real estate part of the enterprise will probably be under the control of the Commissioners of Fisheries, Game and Forests, whose course with respect to the St. Lawrence River Park camp site purchases showed that land jobbing schemers would find in the Commission an insurmountable obstacle to raids on the State treasury.

It is related that Judge Forker, of Brooklyn, after having fined several culprits for robin shooting on a recent occasion, was thereafter induced by counsel for an accused Italian to take the view that robins were no longer protected on Long Island, the "five years having expired." There was no five-years law to have expired. Robins in that region are under protection as they are in the rest of the State. They come in the classification of wild birds for which no open season is provided. If the common people who own the farms and the gardens and the orchards frequented by the robins are not permitted to kill the birds, there would appear to be no good reason why strolling gunners from the cities should be given license to shoot them.

By the way, sea gulls are also among the species which the people of New York have expressed themselves as anxious to protect against the attacks of wanton bird killers; but a Long Island exchange heralds as "a feat quite rarely accomplished" the killing of fourteen sea gulls at a shot by Mr. H. Baker, of Freeport. There are people who value the sea gull as a pleasing feature in the landscape. The gulls are distinctly of value because they form such a pleasing part in the landscape; they are often the animate features of the scene which lighten it up and give grateful relief to what otherwise would be somber and uninteresting. No seashore resort can afford willingly and wittingly to dispense with this attraction of wild bird life. From this point of view then, when an unthinking gunner fires into a flock of gulls for no other reason than to brag of the numbers thus foolishly slain, his act is an outrage on the community. The laws which govern those matters are intended to discourage the perpetration of such doings by people who lack that good sense which in itself should be a deterrent force sufficiently strong to prevent the slaughter of gulls and other sea birds. If there is a game protector whose district includes Freeport, his early attention to this gull shooting incident might be effective to draw public attention to the subject in a way which would be beneficial.

By the courtesy of Mr. Fred Ireland, of the staff of official reporters of the House of Representatives, we are enabled to give in full the debate last Monday on the bill prepared by Mr. Lacey, of Iowa, to enlarge the duties and powers of the United States Commission of Fish and Fisheries, to include in its scope the propagation and distribution of game birds. Mr. Lacey had the satisfaction of seeing his measure approved by an unanimous vote; and we assume that the Senate will concur. The bird stocking enterprises open to the National Commission are varied and generous in their scope, and if the work shall be wisely directed we may look for results with game answering in some measure to what has been accomplished in the fisheries.

The meeting of game wardens in Chicago last week to consider provisions for an uniform game and fish law for adjoining States in the Northwest is the most important meeting of its character of the year. The distinguishing characteristic of the convention was its saneness. The topics discussed were such as to require for their intelligent consideration something besides whim and impulsive ignorance. The delegates were officials of wide practical experience. The suggestion offered had grown out of this experience. We look for substantial results.

Mr. Price's "Waste of the Warp and Woof" is a story of one of the queerest customs in all hunting; and the story is told in a way well worthy the subject. From time to time we hear of the shirt penalty imposed in various parts of the South and Southwest.

Baltimore announces a sportsmen's exposition in April, to comprise a trade exhibit, a bench show, greyhound, foxhound and beagle trials, and a shooting tournament.

The distinction between skill and luck, as recognized in hunting, is this: When you make a wonderful shot, that is skill; when you miss an easy mark, that is luck.

For Christmas Reading.

Here's to Tracks!

Apparently a whole lot of people are still polyps, and I am going to watch and see if they do not multiply by fission. The discovery was made like most discoveries, rather accidentally. A copy of Mr. Thompson's beautiful book on "Wild Animals I Have Known" was left upon my office table in a conspicuous place, and this was the means for opening a new vista of vision into folks.

First, a young man convalescing from an appendicitis operation came into the office. He picked up the book and looked through it rapidly, turning certain pages sidewise and mumbling something about tracks. Then he said: "Funny, isn't it, that an author likes to illuminate a book so much with tracks." Poor fellow! thought I, a tonic will soon bring you out of this.

Then a clergyman came in and adjusted his glasses three or four times before deciding that his view of the pages was correct. "This matter of illuminating a book with tracks," said he. "Why does not an author who draws so well choose something symbolic, or at least significant?" I was not yet aroused, because there was the feeling that a man whose gaze had been steadily fixed upon the sky for many years might not know what was going on here below. In fact, I had seen his signature attached to a patent medicine advertisement.

A fashionable woman was ushered in by my door boy, and while a receipt was being made out for her bill she looked at the book and remarked that it was beautifully gotten up, but some of the pages seemed to be marked with spots that looked like tracks. The bill that she had paid was a large one, so it seemed as though she must be a superior woman. Yet tracks meant nothing to her. If she ever saw a wild animal in the woods she made a lot of tracks herself. Her pet dog never made a track in his life, unless as a pup he fell into the milk pan and then lay down upon the silk sofa cushions. But that would have been interesting after all. Yes, indeed! How can any tracks be uninteresting?

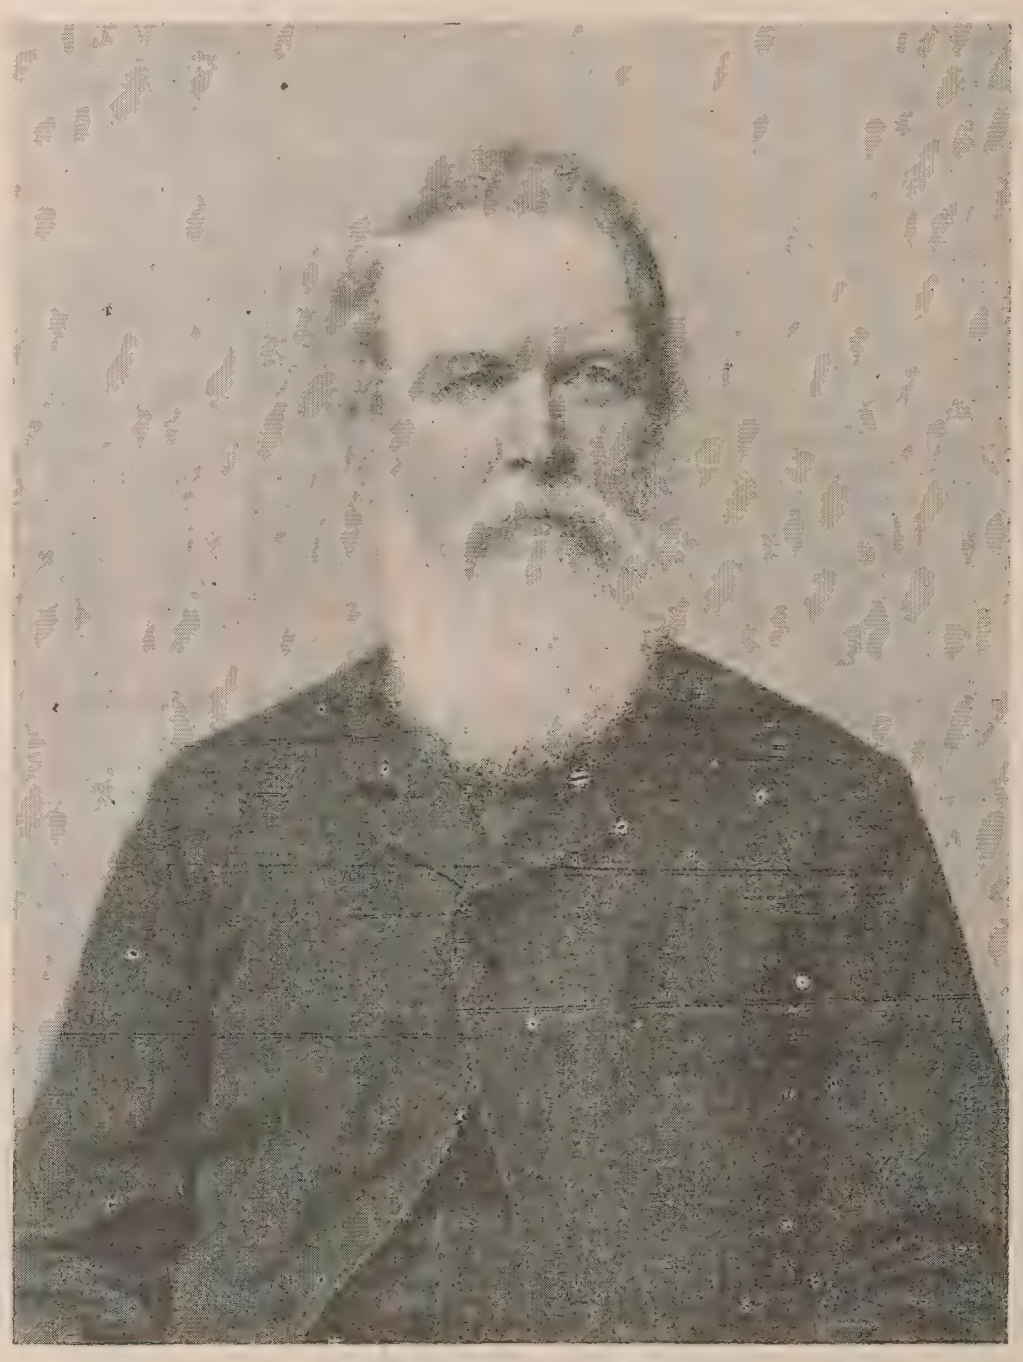
Then there came to mind the remembrance of a tragedy of last year. I had spent a good part of the summer, and had risked my life on bad rivers, and had braved all sorts of hardships to get a series of photographs of tracks. I had negatives of tracks of bears, wolves, foxes, lynxes, wolverines, caribou, porcupines, otters, martens and arctic hares. We went on a two days' trip up a wicked, thundering river, just to see if a polar bear that had been seen a week previously by the Indians had left any tracks on the bank. He had left a fair number, and a pretty good negative was obtained. Among my films there was a negative of a pretty girl on the steamer, a long-bearded pilot, a house on the point, and a number of other truck things that I had photographed for lack of something better to do *en voyage*.

On my return the films were given over to a concern for development, and when I called for them later the photographs of the pretty girl and of the pilot and of the house on the point were shown to me with pride by the developer. "But where are most of the series of films from No. 30 to No. 120?" I asked. "Oh," said he, "that was a funny lot of failures. The films looked as though they just had tracks all over them, so I threw them away."

When I prepared the manuscript for my little volume of field sketches last year it was at first planned to have a good many illustrations. I wanted particularly to have a drawing of a partridge track in the snow, but no illustrator would give his mind to that for an instant. He would draw a pretty girl awaiting our return, or a long-bearded local inhabitant, or a curious house that was known to be haunted, but a partridge track in the snow—oh, never mind that!

Putting all of this testimony together, we have evidence that folks generally do not respond to the richness of suggestion that is found in tracks. Richness of suggestion gives charm to the words of the poet, beauty to the master stroke of the artist, and it fixes our interest in the data of the scientist. Richness of suggestion I see in this mink track under the overhanging sedges by the brook. When was he here? Where has he gone? Has he caught the big trout that lurked under the drift here during the summer? Did he go up into the cleft of the rock where his track seems to turn? If he did he very likely made a rabbit bounce out in a hurry. What a beautiful skin he must have if the fur is held in the proper light. Wonder if he dove into one of the subaqueous doors of the muskrat house here in the rushes, and then silently poked his blunt nose and beady eyes and sharp teeth into the presence of a happy family of four muskrats who thought themselves safe. Here his track passes the track of a skunk. Did they see each other in passing? How did these two weasels make a sign of kinship? Did each hope that his relative would die on the spot and leave his possessions to the other? Did they attempt to force any such entailment by resort to tactics? When Betsey Bobbett remarked that "one-half of this world doesn't know what the other half is about," the good housewife replied: "Don't worry about that, Betsey, it's no fault of yours." I cannot get comfort out of the feeling that it is no fault of mine for not knowing what the mink did last night, or what he is going to do to-night. I want to know. There is so much of interest about his track that I sneeze. I sneeze because I have stood still so long in the cold wind pondering over the suggestions made by the little track in the soft sand by the spring brook.

* * *



Lonesome and homesick in a foreign land, far from the English language, I stroll dejectedly into the forest. I have no heart to become interested in the scenery or to give a second look at the castle in the distance. The world is cold and barren and inhospitable, and a man's life doesn't amount to much anyway. Here is a partridge track in the snow. How much it looks like the track of a partridge at home. Just like the one among the sumacs behind grandfather's barn on that bright Christmas morning three years ago. How warm the big, open fireplace was that day. And grandmother's pumpkin pie. How good that was—made out of old-fashioned pumpkins. The crust brown and sticky where the juice of the pie ran over and glazed it richly. Pumpkin pie 1in. thick. And dear sister Nellie, how good and kind she is, and how pretty she looked that day. Uncle Joe is a wit though. Didn't he keep us shouting all day long, and how glad they were that the mortgage was all off from the property. Well! well! Here I have been right at home for half an hour. The world is all right. The partridge track did it. I'll accomplish great things over here, and then go back proud of my laurels to the good part of the earth that is still as bright as when I left it.

* * *

Great men have made fame with their toasts. Personally I do not care for fame, because it is said to take up a good deal of one's time. A few odd passes were made for it in earlier days, before I realized what it might do to a man, and now I don't want it at all on my own account, but on my wife's account I will bear anything, so here is another attempt at gaining fame—a Christmas toast—Here's to Tracks!

Robert T. Morris.

New York.

ROWLAND E. ROBINSON.
"Awahsoose."

Books for Holiday Presents

Should be ordered in good season, to avoid delays. Every year, experience has shown, some books have been ordered from the Forest and Stream Publishing Co. at dates too late for sending them in season to reach recipients by Christmas.

African Explorer (spinning a yarn)—"Not very long ago I went out one day unarmed, when I suddenly found myself face to face with three lions."

Friend—"Well?"

Explorer.—"I fixed my gaze on the brutes, then stuck my hands in my pockets, and walked away, whistling an air from an opera."

Friend—"And didn't the lions immediately rush at you?"

Explorer—"They couldn't. It was at the zoo."—Temps.

Landlord Dayton's Shooting Match.

As Phineas Dayton sat in his neat bar room the morning before Christmas, sixty years ago, he was an ideal landlord to look at; portly of form, genial eyed, firm mouthed. Just now the bulky figure and firm-set lips seemed to the young fellow who sat on the settle opposite the landlord's arm chair to quite overbalance all the good humor that the eyes expressed, as the younger man, evidently awaiting some momentous answer, lifted frequent furtive glances from the hands that nervously fingered the rifle resting between his knees.

A step outside attracted the landlord's attention, and looking through the window he saw, passing it, another young man, also bearing a rifle.

"Tom! Tom! come in here," Phineas called peremptorily, and the other entered with a puff of wintry air that set the advertisements of steamboats, stage coaches and stallions on the wall to rustling and flapping.

The newcomer, tall, blue-eyed and yellow-haired, bade the landlord good morning, nodded to the other and looked at both in puzzled inquiry. The occupant of the settle, the opposite of the other in stature and complexion, returned the nod and glance half-defiantly and again tried to read the landlord's face.

"Tom," Landlord Dayton began abruptly, "you an' Dick has bin a-hevin' on't nip an' tuck for my Dorothy, goin' on a year. Yest'd'y you as't me for her, and to-day Dick has. You're tol'able good boys, both on ye, an' one is about as well off as t' other, an' I hain't a ha'penny's ch'ice betwixt ye. I don't believe Dorothy hes, nuther, anyways. I hain't seen her show no favor, an' mebby she won't hev nary one. She's a chip o' the ol' block, an' some sot, but mebby my say so 'd move her a leetle."

The young men blushed hotly, glaring on each other, while the landlord studied their faces with a twinkle of amusement in his eyes, and then continued:

"It's nip an' tuck wi' ye tew on your shootin', both on ye pooty good at it, but nary one nothin' tu brag on over t' other. Haint that so?"

Each assented hesitatingly, wondering what possible bearing the statement would have on the decision of his fate.

"Wal, then, I'll tell ye what I'm a-goin' tu du, an' give ye a equal chance. You both on ye start aout wi' your rifles at 10 er-clock, percizely, an' the one 'at comes in at dark wi' the biggest string o' pa'tridges he'll hev my consent an' what help I can put in tu git Dorothy. Naow, what d' ye say?"

"What I say is," Tom broke out hotly, "what I say is, I won't du no sech a thing! You're just a-jokin', Mr. Dayton, a-gamblin' off your darter on a feller's luck a-huntin'!"

"Wal, if you're afeard tu try it, I haint," Dick sneered.

"You'd ought tu know it haint that, Dick Barrett," said Tom, calmly, but with a suppressed danger signal in his voice. "It's the idee 'at goes ag'in' my grain. But you haint in airnest, Mr. Dayton, I know you haint!"

"A-meanin' every word I'm sayin'," the landlord said, shutting his mouth like a steel trap. "You can try or let it alone, but the one 'at fetches the most pa'tridges gits the gal, so far as I can help him tu her."

Tom studied the determined face a moment before he answered, "I'll be in ag'in afore 10, an' let ye know whether I will or no," and with that went out.

"An' if you'll jest set my shootin' iron inside your bar, so 't the' won't be nobody foolin' with it, I'll go over tu the store an' git me some paowder, an' I'll be on hand an' tu rights," said Dick, handing his rifle to the landlord and hurrying out.

The landlord placed it inside the bar, which had a wooden grating from counter to ceiling, and then carefully locking the door, but forgetting to take the key from it, went away with a ponderous but brisk step, that set bottles and glasses to clinking merrily behind him.

No one of the three occupants of the bar room had noticed that when Tom Hale became one of them the door of the dining room was drawn the least bit ajar, and one black eye of the landlord's niece and hired girl, Susan Crane, took a position in it to feast on what it and its mate loved best—the handsome, devil-may-care face of Dick Barrett. Then the conversation grew interesting, and she put the best of her little pink ears to gathering every word of it, and when it was ended and the bar room empty, she entered it on tip toe, hovering about the now accessible bar more eagerly than a thirsty toper, with the strong temptation to steal the gun, and quite ready to make it useless if she only knew how. Then she was given a great start by the sudden entrance of some one, who proved to be Billy Cole, the lame ostler, who hopelessly adored her, and would lay down his life for one of her smiles.

"Oh, Billy!" she said, rapidly, in a stage whisper, "what d' you du tu a gun so it won't shoot good? Quick, tell me!"

"Du tu a gun?" he repeated, staring at her open-mouthed. "Why, you can bu'st 'em, er smash the lock, er wet the primin', or if it's a flint lock, loose the flint."

"No! no! not to spile it for good an' all, nor so you could tell right off what ailded it, but somethin' kinder blind. Oh, tell me, Billy!"

"Wal, it depends so'thin' on what kind of a gun it is,"

he explained, with exasperating deliberation.

"Oh, such a gun as Tom Hale's or—a—why, such a gun as this"; she opened the door of the bar and pointed at Dick's rifle.

"Why, that 'ere is a rifle; it's Tom's or is 't Dick's—haint it or haint it?"

"Yes, yes, but haow du you fix it?" she said hurriedly.

"Oh, I'd just start the sight a leetle grain," he answered, with longing eyes on the row of bottles.

"Oh, you du it, Billy, an' I'll du anything for you—quick! I want tu come a joke on him!"

Her eagerness overcame her womanly fear of the gun and she placed it in his hands; then laying her own upon the bottle of Old Jamaica, added, "An' you can have a pull at this 'ere."

Though Billy did not need this further incitement to do her bidding, it had its effects in hastening his movements, and taking his jack-knife from his pocket he knocked the back sight almost imperceptably to one side. Then he replaced the rifle and took a generous draught from the bottle without waiting for the medium of a glass. Susan recorked it, and was returning it to its shelf when he arrested her with an outstretched hand.

"An', naow, jest another swaller, Suky! A little haint much, and twicte haint often. The ol' man is pooty savin' o' the grog he gives away."

She gave him the bottle again with some misgivings, not lessened as the upturned bottle arose to a sharper slant and he still held his breath in the improvement of a rare opportunity. It was cut short by the sound of the landlord's footsteps pounding an adjacent floor, and the two conspirators retreated, Susan to the kitchen, Billy to the hearth, where he was ostentatiously mending the fire, when Phineas Dayton entered the room.

The ordinary balance of Billy's body on its one sound leg was somewhat disturbed by the unusual weight of his potations, and he came near pitching headlong on to the blazing back log. Then in the violent struggle to recover himself he overdid the point, and sat down heavily on the hearth.

"What the devil be you up to naow, Billy Cole?" the landlord demanded, coming to a sudden halt behind him.

"Up to nothin', Phineas," Billy answered huskily, staring owlishly at the fire, "settin' daown I be, a-tryin' for tu warm my feet."

"Jes naow it was your head you was tryin' tu warm, an' come mighty nigh it! Why, man alive, you're drunk! An' where in time d' ye git your liquor? Ah, I see!" as his eyes slowly ranged the room and discovered the forgotten key in the lock. "Haow dumb careless I be! Key in the bar, hostler in the fire, an' the devil to pay gen'rally! Say, Billy Cole, the's somebody a-comin' an' I haint goin' tu hev 'em see you floppin' 'round drunk this time o' the mornin'. You git int' your bunk."

With that he threw open the seat of the settle, which enclosed the ostler's nightly couch, and lifting him from the floor, dropped him therein and shut down the seat in spite of the poor fellow's feeble resistance and more vigorous protests. This was but just done when Tom and Dick returned, and the latter was given his rifle.

"Goin' tu try your luck, haint you, Tom?" Phineas asked, cheerily.

"Wal, it's mighty mean business, Mr. Dayton, but I be a-goin' tu," Tom answered, desperately, at the same time making a mental reservation that he would not abide by the terms of the match unless it resulted in his favor, which was hardly fair, save as all things are so in love and war.

"Wal, then, it's 10 o'clock, an' time you tew was off. May the best man win, but haowever it turns aout, we'll hev pa'tridges for aour Chris'mas dinner, for I cal'late you'll both on you du your pootiest."

With this Phineas opened the door and the pair went forth, each betaking himself to his favorite hunting ground, and inwardly wishing the other the worst kind of luck. As he watched their departure, the landlord chuckled till his fat sides shook, and he said to himself: "I'll git a mess o' pa'tridges anyway, an' it won't make no odds." Then he took Billy from the box and with a sharp admonition bundled him off on unequal, devious legs to the stable.

Susan ran straight to her cousin with the fruits of her eaves-dropping, but prudently withheld her share in the plot, for she was not sure which suitor was most in favor with Dorothy, who was something of a flirt.

"Did you ever hear of anybody so mean as father?" Dorothy cried, shedding tears of shame and vexation. "A-setin' up his own flesh and blood to be shot for, like a hen-turkey! If he don't care no more 'n that who gits me I won't hev nobody he wants me tu—not nary one of 'em—Dick Barrett was fast enough for it, was he? Well, he won't git me if he gits a back load o' pa'tridges. I can tell him that! An' wa'n't Tom noble, talkin' to father the way he did! It ought to shamed him. Don't you b'lieve Tom will try? Oh, I wish he would beat—only I wouldn't hev him—not for that."

"Oh, I guess he will, an' if he don't, I guess it'll be all right," said Susan, delighted to find how favorably the wind blew. Yet she must put in a word for her heart's choice, "But I tell you he'll hafter be smart if he beats Dick. They say the' haint his equal nowhere for shootin'. And oh, if he haint han'some! Be you goin' tu tell your mother, Dorothy?"

"The idee! She'd jest hev a conniption."

The girls interspersed the busy preparations for Christmas with frequent whispered colloquies, while one openly wished for the triumph of her lover, the other, secretly, for the defeat of her beloved.

The swinging stride of Tom's long legs and the quicker movement's of Dick's shorter ones carried the young men at a lively pace over the light snow that covered the earth and still lay undisturbed on every twig and branch, where it had found lodgment. They reached their hunting grounds at about the same time. Under the riverside hemlocks, to which Dick went, the white carpet of the woods was thickly embroidered with the footprints of a pack of ruffed grouse, and stealthy stalking soon brought him to a fair shot of one member, making itself as motionless as one of the knots of the log whereon it stood, and as like them as one to another, but for the coping of snow they bore. The immobility and the likeness were still preserved after the sharp report rang through the woods, and the harmless bullet cast up a shower of snow two rods beyond the head, which was its mark. But at the motions of reloading the bird took alarm and went off like a rocket, as did the others, after being successively missed, and then the remainder of the pack followed far into the depths of the woods. Thoroughly disgusted with his marksmanship, but still hoping to retrieve it, Dick went in pursuit of them, and after long and careful search discovered one perched within easy range on a branch of hemlock.

He rested his rifle against a convenient tree, and aimed with most deliberate care, but the shot was as unsuccessful as the previous ones. The next chance he determined to run no risk of losing by a shot at so small a mark as the head or neck, and therefore aimed at the middle of the breast, which squarely fronted him. The bird came down with a gyrating flutter, and when Dick picked it up he found that the ball had struck the butt of one wing, a hit so wide of his careful aim that he at once suspected the cause, and an examination of the sight verified the suspicion. He did not mistrust that any one had tampered with his gun, and only blamed himself for not sooner discovering what was wrong with it. Yet, now that it was set right, fortune did not favor him, for though he soon got another shot and neatly decapitated the bird, the sharpest hunting till the woods grew dark with coming nightfall failed to bring him another chance.

So he took the homeward way with little disposition to show his meager spoils, except for a faint hope that fortune might have been as unfriendly to his rival as to himself.

Tom began hunting on the southward slope of a hill dotted with a second growth of white birches and low-branched young pines, sheltered from the breath of north-

CONSPIRATORS.

ern air that was sharp though barely astir, and warmed by all the slanted sunbeams of the winter day. Here the snow was printed with numerous dainty tracks of grouse that had come from the denser woods to bask in the sunshine in the lee of the pines. In three such sunny nooks Tom found as many birds and neatly cut off their heads.

Then at least a dozen took alarm, and with successive bursts of mimic thunder and accompanying showers of snow from every intervening bough went hurtling into the cover of the woods. Tom skulked after them, stealthy and silent as a lynx, and finding some aperch, motionless as the branches which held them, his bullets gave good accounts of all so found save one through carelessness begot by continual success.

In other covers he found a few more scattered birds, and when the shadows thickened in the woods till the notch of the rear sight was blotted out he set his face toward home, with a bunch of nine grouse slung over his shoulder. Yet this comforting burden did not give him assurance of victory, for he knew that he had a doughty competitor pitted against him, and had heard the report of Dick's rifle during the day as often as his own.

Night had fallen when he reached the tavern, which was aglow with firelight and lamplight, a hospitable beacon to neighbors and wayfarers. Some of these, gossips and strangers, were gathered in the bar room when he entered it, after hanging his game in a safe, secret place. The landlord leaned against the bar, awaiting the orders of thirsty guests, and Billy Cole sat on the bunk, sadly sober now, with his lantern beside him in sullen readiness to answer a call to the stable.

"Hello, Tom!" Phineas hailed the newcomer, noting with a shade of disappointment that he carried only his gun. "Did you git more 'n you could lug hum. An' Dick, he haint come in yet. I hope ye haint shot him."

Nevertheless Dick was in the kitchen at that moment, to which he had covertly come, hoping to have a word with Dorothy, but fate so ordered that Susan was first to meet him at the door.

"Why, Dick Barrett! is them all you got?" she exclaimed in a pitiful voice that her delighted face belied when she saw his paltry trophies. "Naow haint it tew bad! An' you've be'n a-huntin' all day an' haint hed a single maou'ful to eat. Naow you set your gun in the corner—ugh! I wouldn't da'st tu tech it for all the world—an' you come right int' the butt'ry an' git you a bite. Aunt Mahaly's up stars a-helpin' Dor'thy prink—goin' tu the duin's tu the meetin' haouse long wi' Tom Hale, I guess—it'll take her 'n' her mother a good haour tu fix her up. There, take right a holt an' help yourself. The' haint much, but it'll keep you from starvin'."

He was hungry and grateful, and withal Susan had never looked so pretty. Out of gratitude and admiration a new flame sprang up in his heart, so fervent that before his supper was finished he was telling his love to a new sweetheart. When he presented himself before Phineas Dayton, half an hour later, the landlord was a good deal surprised that he should accept defeat with such equanimity, but far more so when told that he had won the neice and no longer desired the daughter.

"Wal, wal, if this 'ere haint a devil of a haow-d'-ye-du," forcing a chop-fallen smile, while the two young fellows shook hands and exchanged hearty congratulations. "It 'pears as if I'd sold my birthright o' gals for a mess o' pa'tridges! I wonder what in time Mahaly'll say? Wal, to-morrer we'll feast an' be merry, an' nex' day you'll hitch the gray mare out' the shay, Billy Cole, an' I'll go a-huntin' hired gals. Cuss the luck! Come, gentlemen, all hands walk up tu the bar an' take a holt. It's my treat."

ROWLAND E. ROBINSON.

The Christmas of Ar-kee-kee-tah.

GRIM and gray, the sage plains swept away to the down hanging dome of the sky, so blue, so deeply blue overhead and fading to a haze where it met the butte-lined horizon where the snow lay.

Peace. Peace brooding over a hell of desert and storm-wrecked desolation. The land where time leaves off and eternity begins. Here are gathered together surely all the leavings of a creation, the fag ends and trimmings that came from a finished world. It is 1,000 miles across it from sunrise to sunset. It is another 1,000 miles across it from the lodge of the springtime to the lodge of the frost—aye, and 1,000 more miles beyond to the edge of the winter country, and beyond that? No man knows.

"To-night a great star will hang over this desolation. It will shine blue and red and white, and it will be a signal fire in the sky. A-a-a-nah! It will be a signal fire, Snugwillimie. Listen, Ar-kee-kee-tah, the one of wise thoughts, listen and I will speak the tale.

"To-day we are to kill that to-morrow we may feast, for to-morrow is Christmas with my people, and hot guns to-day speak of much meat for feast day. And the feast is because of this, Wise Thoughts, and so I speak the tale.

"When all the world was small, there was a tribe of many people in a land many days' travel across the great water, and they lived for many summers in a great country like this one, but where there was no sage like grows here.

"Time went on and these people worked much bad medicine and cast many spells so that no man was safe, and evil looked from each man's eye. There was much said only with the tongue and not with the thoughts from the heart. No man was safe because of the wickedness of all the people.

"Then the medicine men made medicine and worked many spells to help them, and they said a great chief would come who would tell the people of their evil ways and that he would make strong medicine to show that he knew. A light would be set in the sky as a signal fire and all men were to bow down to the great one who would be chief under the star, and his medicine would be strong and good against all evil spirits.

"Now, when the medicine men said these things, there were young men who said they talked double and did not know. No chief would come and no light should be set in the sky as a sign, they said.

"Some thought the words of the medicine men were true, and they watched for the sign and waited.

"Then one night a great light was set in the sky, because the chief had come in the form of a new-born child, for he was a medicine chief, and wanted to grow up with his people, so he would know how to work spells against evil.

"That, Wise Thoughts, was so long ago that no man lives who saw it, but the story is told yet in the white man's lodge, and we know it was so. The time was the first snow moon when as many days as five times the fingers of one hand had gone by—and to-day is lacking one day of the time, Wise Thoughts.

"Time went on. The chief grew, and by and by he was a man. He had strong medicine—so strong that he could lay his hand on a man whose leg was dry and useless like the leg of a deer that has been shot high, and goes on three legs afterward, and say to such a man, "Walk," and the man walked. So strong was the great medicine that the chief walked on water like we walk on the land. A-a-a-nah!

"Many things were done to show by this sign that the star chief was good, but there was much evil in the land, and a time came when the wicked men came in a body, and after a time they nailed the chief to the torture post with big spikes and tortured him with a head band of thorns like these on the no-water plant here.

"And so, Wise Thoughts, the great chief died, but that was to be, and His spirit rose and went up to the star where He still lives, and now the star hangs in the sky that men may know it is a true tale. By His magic the great chief can drive away evil spells, and if you make strong medicine, talk to Him when you are in trouble, or when your feet take you on a wrong trail, then if you believe in the Star Chief and His medicine, He will help you and evil spells cannot be cast against you.

"That, Wise Thoughts, is why we who are of the white skin call this day Christmas, and make it feast day and make presents to the little ones that they may remember it always. Is it not a good tale?"

"A-a-a-nah! It is a good tale, Snugwillimie T'solo, the white wanderer, it is a good tale, and for the feast of the Star Chief we will kill meat to-day on the gray desert. It is a good feast day, a good medicine feast, and I will eat meat at your feet, and it will be my feast too, for I know the tale.

"You did not speak the name of the Star Chief, Snugwillimie. Say the name that I may know it and remember the tale."

"The name, Wise Thoughts, is Christ."

"A-a-a-nah. It is a good name and easy to speak, and I will say the tale in the story lodge of the people with the black hair."

"And now, T'solo, the sun shines with good heat, the snow is soft, and Washiki, the deer, moves because of water in his bedding ground. The snow will show his sign and we will kill feast meat for the feast of the Star Chief."

Then we walked among the breaks of the hillside there in the sage desert, and saw the sign of Washiki in the snow and followed it, we two, until Washiki bounded across the white of the snow.

Then the rifles spoke, and the snow was red where Washiki fell because of the feast medicine in the guns that sent the bullet true and gave meat for the feast of the Star Chief.

When night came Wise Thoughts stood by my side and we saw the sign star burn blue and red and white.

"I have seen the sign star of the Star Chief, Christ, and I will remember," said Ar-kee-kee-tah.

EL COMANCHO.

The Waste of the Warp and Woof.

THE laws of the chase are clearly defined. The "rule of conduct" is nowhere better understood. In the elaborate fox chasing of England, carried on with so much fuss and feathers, the rule of conduct is fully prescribed, and a first-class Magna Charta Briton may be a first class outlaw on the hunting field. You remember the famous case in "Handley Cross" of "Par shoots the fox!"

But in a much more intense degree, if not so elaborate, is the rule of conduct prescribed when a party of men go into the woods to hunt deer. The *lex non scripta* is well understood, and the association of a party of men in camp presents a study for the sociologist. The veneer of society is rubbed off. The men recover the faculty they possessed as boys to know a good fellow from a chump. Like Mark Tapley, the men come out strong, and the largeness of their nature can be well gauged. The most damning incident of a man's record is that, having gone out with a party of men once, he never received the second invitation. He had been exiled from the democracy of the camp.

This should make a man feel very humble, and the man who is not bidden to come when the gang goes back should become ashamed about himself and hold an investigation at once. It is time for him to do the sackcloth and ashes act.

I am sure the importance of this question must be recognized by everyone who goes camping. The uninformed think that with no one else to depend upon for society, the camper must feel drawn to his camp-mates. He will if they are the right sort, but one "crank" (not to use a harsher expression) will destroy half the pleasure of the trip.

To illustrate this, take a historical incident. The first settlement made west of the Alleghanies, in Virginia, was on the site of this county-seat town. Two hunters, Marlin and Sewell, decided to winter here. They built a cabin, but could not occupy it in peace. Marlin drew off and camped in the huge, hollow hole of a sycamore tree. It would be interesting to know what transcendent acts of hoggishness his brother hunter was guilty of to compel him to leave the cabin. I take it Marlin was the better man, and that in justice to him the town bears his name.

It is a standing wonder how the two men alone in the wilderness could have parted company, to all who have not tried to live in the woods with a crank. Those who have tried it can understand. But if the select democracy of the woods by their *lex non scripta* can prescribe what is right, they can also prohibit what is wrong and provide penalties, and it is such a custom that we wish to discuss.

In this section there has been a custom, since the memory of man runs not to the contrary, that the hunter who misses a deer which in all reason he should have killed is subjected to the mortification of having his shirt cut off under the arms, and torn into ribbons, to be worn by the rest of the hunt, in the manner that college colors are worn at a football game.

I have recently learned that this is good law all over the country.

Of course it is confined to the chase, and is one of the many sporting features that marks the community of interest of men and hounds in the chase, over the solitary delights of the still hunter. It might be a relief to the feelings of a still hunter who has missed, when he ought to have kept cool and killed, to do penance for his error, but for him to do it would identify himself with that wonderful character of whom we have all heard, but never seen, who took himself to one side and gave himself a good kicking. I know a man who says he did kick himself for not shooting at a flock of turkeys he had figured out as tame, when they all sailed away, and he a-turkey hunting too.

Everyone who hunts deer knows that the best shots will miss on good opportunities to kill, at times. But there is very little mercy shown to victims of the dreaded buck-fever. They are disciplined to the fullest extent. It takes a cool man to kill a bounding deer fleeing from the hounds. How often has the stander wished for the opportunity given to the still hunter to shoot a deer in its bed or standing unconscious of danger. He is called upon to kill the deer as it whips out of the dense forest into the narrow bed of the stream and out of sight again in five seconds.

How often we observe the compensation plan in nature. The size of big game, which makes such a huge mark, brings on such excitement in the nervous system of the hunter that it makes it quite safe with the average man, and his failure sends him into camp exceedingly sorrowful.

Many hunters have never seen this law of the shortened shirt executed, though it is in full force and effect. In the same way one may never have seen a man hanged, though affected by the laws providing this punishment for certain offenses. Some of the proceedings are very summary:

A hunter was standing at the Island Stand and a big buck was driven into the river at that point, and crossed within about twenty steps of where the hunter was standing. The buck had a track as big as a mule, and evidently its size brought on a fit of nervousness, for he fired a few times and scored a miss. When he confronted the camp his pleas were too complicated for frontier life, however well they might have answered in a court of justice. His defense was that the deer had never come into the stand, and that a little Skye terrier, which was with him, had barked at the deer and scared it away. Having "done told two tales about it," his shirt was promptly taken off below the arms and he was "bucked" for "bringing such a dog as that" on a hunting trip. The above is the only incident of that day narrated by the party, except that a moonshiner had just marketed a two-gallon jug of white whisky with them.

A man was standing on the Greenbrier, with a mountain rifle as his weapon. A deer came dashing down the shingle and he pointed his gun in that direction and fired. The deer stopped to see what was up, and the hunter was in such a state of excitement that he poured all his powder out of his horn on the ground without succeeding in getting a charge in the gun barrel. The deer ran on and was killed about four miles down the river. He had no defense to make, and "walked up to rack" to suffer the penalty.

One of the best hunters in a hunt had spent the morning on a deer stand, and instead of going into camp, had gone to the post-office for the mail. The post-office was kept in a country store, a low, weather-beaten shanty, and off in a lumber-room were several barrels of whisky with spigots in them, from which the liquor was drawn off to be distributed to such customers as had a taste for the vile stuff. He met some friends there, and several rounds of drinks followed. Realizing that it was time to get back to camp, he started down the road. When he had gone about a mile, a buck with a big head of horns jumped the fence and stood before him in the road. Then he was a victim of a most remarkable phenomena. He could see the deer standing motionless before him, but when he leveled his gun at it and looked along the barrel, a mist seemed to surround the weapon, causing a blur and obscuring the deer. He could not get rid of the aggravation, and he had to shoot more or less by guess. The buck ran away unharmed. In a few moments he met the hunt, who destroyed a garment which had "cost two dollars at the Warm Springs the week before!" They divided it among them and each wore a part of it, according to the custom of the country.

The justness of the custom is realized, as may be seen in the following incident: A party of nine went out for a week's hunt. They were farmers with hunting instincts strongly developed, and when they got their corn cribbed they went out to enjoy the pleasures of the chase. Their custom was to impose the fines the last day in camp. This particular trip there was an unusual number of deer missed. What with the deer running straight across the stream or turning up when they should have turned down and vice versa, there were but two in the party who had not missed a deer. One of these was a young man, out for the first time, who had emptied a Winchester into the body of a big buck. When the settling time came, the rest of the party gravely did execution on themselves and handed the trophies over to the two who had not been guilty of missing a deer.

The foregoing are typical instances of their kind. The average case is a rough, informal method of meting out justice, in sport, which unhappily savors of another sort of summary vengeance that is anything but sport. But in Virginia there was once a hunting club where all the dignity and safeguards of the law were thrown around the accused. There was a regular *nisi prius* judge to sit on the case, who knew what it was to say to a shrinking, palpitating, terrified prisoner, that on a certain day he should be led to scaffold; there were able lawyers to conduct the case, expert witnesses to testify, and jurors who felt properly—that is, that any day any one of them might be before that solemn tribunal on a similar charge.

The club was domiciled in a long two-story log house in the woods. The lower story was used for the kitchen and dining rooms, and the upper story for the living and sleeping rooms. A big fireplace afforded a cheery blaze. The bunks were ranged along the walls. The hunt generally numbered from twenty to thirty.

The rule of procedure was to arrest any hunter who had missed a deer immediately after the morning hunt, and admit him to bail to appear for trial after supper in the sum of $10. If he forfeited his bail, the sum was charged against him and it went to pay expenses.

There was a particularly plain case against a young man named Newman. He had been on the stand on the bank of a stream and a big buck had passed down the stream in front of him, not 20yds. away. Newman had been so paralyzed that he did not fire, though he was armed with a double-barreled shotgun. There seemed to be no defense to such a case, but they worked a noted trial out of it. The prisoner secured a lawyer who had a large practice in criminal courts. Their defense was "uncontrollable nervousness." The prosecutor wished the court to compel them to plead "buck fever," but after a very learned argument the court decided that there might be a shade of difference in the two terms, and the plea was accordingly entered.

The case being proved as stated, Newman went on the stand and stated that he had from his childhood been the victim of uncontrollable nervousness, which had a paralyzing effect upon his faculties. Instances were given as follows: As a child he had gone into an orchard to steal apples; owner appeared, other boys ran, he was too badly scared, was unable to run, and the farmer "took it out of his hide." When a schoolboy had tried to say a piece in school one day and could not open his mouth; had on one occasion tried to respond to a toast and made a total failure. Had tried to propose to a young lady and nearly choked to death. Found himself unable very often to ask a waiter for what he wanted at a strange hotel. When excited was often unable to write his name. On cross-examination he admitted that it excited him to be asked to indorse a note. As to not shooting at the deer, he remembered the occurrence as a frightful nightmare, in which he was powerless to move hand or foot.

A doctor, called to pass his opinion upon the effect the sudden appearance of a large deer would have upon a man of the excitable nature described above, said that he thought he would "explode." He said further that it might or might not be possible for the prisoner to overcome that nervousness in time, and unless he knew his previous hunting record could not say whether it was inexperience or mental disability. He expressed a somewhat learned opinion that this nervousness was due to the patient holding his breath. When asked if he meant by "patient" a man on a deer stand, witness became very violent and used strong language. Witness said further that this unconscious holding the breath could be probably overcome by holding a hunting knife or other article between the teeth to keep the mouth open.

On the whole, the trial was very warm and very long, but must be imagined, as the details are not to be had. But it was clearly shown that the prisoner had not taken the precaution to have a hunting knife between his teeth, and was consequently liable to be punished.

The jury brought in a verdict of "Guilty" and the sentence, as pronounced by the judge, was duly carried out: That the prisoner at the bar be deprived of the lower part of his hunting shirt, the same to be nailed to the gable end of the house, there to remain until he do kill a deer.

ANDREW PRICE.

MARLINTON, W. Va.

Sport in Santiago Hills.

SEVERAL years ago an old Cuban gentleman told me of the fine hunting that he used to enjoy in the hills around about Santiago, but I little thought then that I should ever visit that interesting country.

As a member of the Sir Thomas Lipton War Relief Committee, it was my fortune to pass about a fortnight in Santiago Harbor, and I employed a portion of my time in looking up the game and fish. On either side of the Yellow Fever Island there come in two small rivers, navigable in canoes for about five miles, when we reach the lofty mountains. The water is cool and clear, and quantities of fine fish could be seen. None were taken by our party, on account of the lack of tackle. The bushy shores contained snipe, quail and guinea fowl in abundance. No hawks were visible, but the air was dark with buzzards around about the city. The hunters all said that the buzzards did no harm to the game birds or their eggs, but were merely scavengers. The waters of the harbor are pretty sluggish, and the bottom is covered deep with greasy mud, but the sailors managed to catch some fish one day, including a big red snapper, which were served in the captain's cabin and pronounced excellent. In the harbors of San Juan, Ponce and Santiago the gars seemed fairly to swarm. These fish ran from 1 to 3ft. in length. At night there were many large fish about, judging from the splashing.

One day a party of us, including Captain Alexander, of the Rough Riders, went to San Juan Hill on horseback, as there are no roads in that part of the country. While the Captain was trying to find the body of Captain "Buck" O'Neil, of Prescott, Arizona, one of his comrades who had fallen there, the rest of us wandered around in the mule trails, now nearly obliterated and grown up to bushes and tall weeds. From time to time the sound of something familiar would come to the ear, creating the impression that a farmyard was near. "Buckwheat! buckwheat!" was the cry, and as we drew near up went a score of guinea fowl, the regular dark gray variety, with white spots on each feather. The birds didn't go far, so we employed our time chasing them from place to place. In doing so, we saw a lot of quail, somewhat larger than our Bob White. These too were very tame, and would let you approach very near. The boys got out their revolvers and blazed away, but as no one had any shot cartridges, nothing came to bag.

The utter absence of any venomous snakes or insects made us all the more anxious to hunt for these birds next day, and we tried all that evening in Santiago to get a decent shotgun. More than ever did I mourn for my new Baker hammer gun lying in its case in New York city. How I should have enjoyed a glance along that "cylinder" Damascus right loaded with "E. C." smokeless and No. 8 shot. No one cared to try Mausers on the game, and as no amount of persuasion could induce Gen. Wood to loan his valuable double-barrel, we had to give up all thoughts of hunting. Captain Brickley and the "Port Victor's" doctor, McClintic, both vowed that their guns would be on board next trip, and I expect to hear from them soon.

The dogs in Santiago were mostly short-legged hounds with long ears. This I wondered at until I learned that the mountains are full of deer. There is a railway running back to some iron mines at Firmeza, thirty miles distant, where there is excellent deer hunting. The animals are similar in form and color to our deer, but are smaller. The flesh is excellent. They are killed by still-hunting.

One day we chanced upon some Cubans living in a hut near the battlefield. They had shot several quail and one young guinea cock, which we ordered them to cook for us. Dinner was soon ready and we made a hearty meal. The meat of the wild guinea fowl, unlike that of the domestic variety, is mostly white and very tender. This may arise from the fact that the guinea is often crossed with the ordinary game fowl here for fighting stock. The cross-bird is said to have greater courage and endurance.

PETER FLINT.

Abe: "Ole Sile Harrower may be a hayseed, but he's jest cute 'nough to skin them city sportsmen who was shootin' round his place yesterday." Ike: "How'd he do it?" "He seed them fellers pullin' fer the train in the evenin' with three or four ducks apiece, an' he up an' made 'em pony up $10 for shootin' of 'em, claimin' they was his'n. An' the fellers left the ducks behind, too." "Shoo, Sile never raised no ducks." "'Course not." "Whose was they, then?" "Nobody's. They was wild ones all right, but Sile calk'lated them fellers wouldn't know the difference."—Life.

A number of sportsmen have been discussing the question of how far a quail can fly. There are a good many contingencies to be considered in arriving at a definite conclusion of the question. If there is a stiff wind blowing and the bird's course is with the wind, a full-grown quail could certainly go more than a mile with ease, and doubtless a much greater distance. Those who have noticed quail trying to fly across the Missouri River, where the distance is about a mile, recall that not all the birds make the trip safely. They usually pick a spot where they can make a halt on a sandbar in midstream, and thus cross the river in two flights. But sometimes they make the distance at a single flight, and this seems to be their full limit under normal conditions, for when they alight they are completely exhausted. It is generally believed that on an average a mile is about the limit of the flight of a quail where it is neither favored or retarded by the wind. It happens very often that in crossing the Missouri River at a single flight quail drop exhausted into the water. Probably these are young birds.—St. Louis Republic.

In Caribou Land.

The friend who gave me letters and supplied me with information that greatly helped me on my recent trip made the condition that I should not tell about the place in the newspapers. But, firstly, there are so many prospectors already in that region that a little more invasion can make no practical difference, and in the second place, Forest and Stream is not so much a newspaper in this bad sense as a compendium of knowledge and a guide in life. I will therefore state frankly that I have been hunting in British Columbia.

My party consisted of a prospector and hunter named Fred, well versed in game haunts, and an invaluable Indian called Sam for short, and we passed through much bad weather and some good luck with mutual content.

The first problem that confronts the traveler here, as elsewhere, is the question of conveyance.

In some hunting regions you can travel by canoe. In others you can make extensive journeys with pack animals. Here you must walk and carry a load if you wish to penetrate to the heart of the country. The only compromise that can be made with this stern necessity is to have your stuff packed up one of the hand-made and corduroyed Government trails a certain distance, and then climb some exceedingly high mountain every time you go shooting.

The reason for this state of things lies in what we may call, in a double sense, the "precipitancy" of the country.

Many ranges of mountains are rockier and in places far more difficult and dangerous to ascend, and some provinces may be wetter. But in the hunting region here you are always on steep wooded or burnt over sidehills.

It takes a day's travel to find a place flat enough to pitch a tent. Much of the ground is marshy. All of it is overlaid with down timber, piled in a deep tangle, and the underbrush is discouraging. Therefore, horses can travel only on the artificial trails, and man power must do the rest.

For a person interested in the preservation of forests and streams, a trip through these woods is highly instructive. For ten miles from the little port whence we started the trail lay over "old burn." Blackened skeletons of former trees dotted the hillside or covered the ground. Underbrush flourished, to be sure, but the soft carpet of mould had been all burned or washed away, and along this stretch there was hardly a mudhole left. The going was excellent. The rest of the route lay through green timber. The damp, mossy ground was elastic to the tread, the more frequent streams flowed fuller, and morasses, impassable except for the corduroy, occurred every few hundred yards, extending in some instances a long way. Many worthy people think that the advance of civilization implies the clearing of forests from the ground, and that to reject this is but an idle sentiment. Doubtless it is true that, where land is good for farming, the greater part of the trees must fall. But there are territories, either mountainous or sandy, quite unfit for cultivation, which have heretofore been reduced to mere deserts of stumps by railroads and sawmills (those twin devils of desolation in a timbered country, unless they be controlled by the hand of science), while the fires of the hunter and prospector often work a havoc more sorrowful because more useless.

It would repay British Columbia, as well as our own country, to jealously guard and regulate their remaining forests, cutting ripe trees and ripening those still young, repressing fires by active supervision and the enforcement of careful rules, and saving for the nation these priceless woodlands that they may be a treasure house of perpetual supply, and a source of perennial waters. Of course, this would be costly. It would demand a large forestry service and a formidable body of regulations, but it would pay the people better than a thousand Pacific islands with the wealth "of Ormuzd and of Ind" thrown in.

Our first hunting camp was made under an old lean-to of hemlock bark that stood between the trail and a good sized stream. The wreck of a former cabin lay a little way off, and kept watch over an abandoned tunnel. These tokens of disaster had no depressing effect. We unloaded our horses cheerfully, and as we could neither use them off the main trail nor get feed for them, we turned their heads homeward and started them back, feeling sure that their appetites and their knowledge of the country would bring them safely to their own barn. Then Sam made supper, and we went soberly to bed.

The next morning Fred and I attacked the mountain at its nearest point. We started at 7:30 o'clock, and the labor of the first half-hour was exhausting. Soon we got into rather better country. The ground wasn't quite so steep; the fallen trees were not piled so thickly, and when we got well up into the snow we saw occasional caribou tracks, which we would follow for a time until they led us into bad places, and then we would look for more sign.

Gradually, however, as we worked west, we seemed to pass off the feeding ground, and we had spent an hour without sight of a footprint when Fred found that his inward monitor called for lunch. So he built a fire and made some tea out of melted snow water. This, with bread and bacon, refreshed him considerably, and we decided that, as there was little chance of finding game further on, we would make the best of our way back to camp.

Hardly had we taken 100 steps from our lunching place when there was a glint in the brush ahead of us, which proved to be the white side of a caribou tail. Several of these animals were scattered around in the undergrowth on the edge of a more distant patch of big timber. I could make out a blackish face looking toward me through the leaves some 80yds. away, and I promptly fired at it. The shot startled the band into momentary activity. I fired at another beast rather over 100yds. away, and was grieved to hear Fred say that I had missed. Still, a third caribou, however, came quartering past us, and this one fell to the shot. I cannot myself, as a usual thing, tell the immediate effect of a shot. If the animal stand in the cover the smoke of the rifle is enough to prevent an instant view of the result, but here Fred stood at my side and kept tally. I had one more chance at quite a distant bull. I could see the horns, but I couldn't make out the rest of him, and the chance was lost in a few seconds to Fred's great disgust. I myself was not displeased; for, on going forward, we found that the first animal I fired at had dropped, shot through the head; the second lay with a ball through the shoulders, in spite of Fred's thinking the shot a miss, while the third answered our expectations by staying where he fell. While we were dressing the last victim, No. 2 got on his legs, and struggled off slowly into the forest a couple of hundred yards before I could catch up with him, and despatch him, which shows two things, first, that it is wise as well as merciful to kill your game thoroughly, even when it costs an extra ball, and second, that the shattering effect of a .30-30 smokeless Winchester, model of 1894, has been exaggerated, or at least that it sometimes falls below the standard of the catalogue.

Of these three victims, the first alone had a head worth keeping, but by way of compensation these horns were wonderfully good, not exceptionally large, but so palmated and so fringed with curving points that all the hunters and taxidermists who saw them said that I might hunt 100 years without finding their mates. I have therefore decided to abandon so long a search. This bull had a musky smell, similar to that of other *cervidæ* and antelope in the rutting season, and yet different in some way from any such odor I had ever met with. The aroma seemed to permeate the whole carcass. I spent half an hour or more in taking measurements and descriptions of the specimen, and in snapping my camera at the body in various positions, and people interested in statistics may know that this animal measured 58in. from the ground to the withers or the croup, and 88in. from the nose to the end of the tail bone. As the meat of the old fellow was uneatable, we merely took off the head and the hide, and left the rest for the martens and the wolverines. Then the other caribou were put in order, and Fred shouldering some 75lbs. of hindquarters, while I loaded myself with the big head, we started down.

The weight of an antlered head increases with years, especially the hunter's years, and while the fresh trophy might have marked but 30 or 40lbs. on a grocer's balance, it soon was counted on a different scale. The scramble down was wearying in the extreme. In default of grasshoppers, the mosquitoes became a burden, and when I at last reached the trail my leg muscles were little better than limp fiddle strings, and I lay down on the moss and waited for Sam to come and take my load to camp, while Fred was sturdily marching along with the heavy hindquarters as if it were an every-day task.

While Fred and I were on the mountain, Sam, after fixing the camp like an artist in woodcraft, had gone fishing and had caught quite a lot of fish about 8 or 9in. long. Altogether we captured nearly 100 little fellows during our stay, I myself taking some 5 per cent. of that total.

These fish were like the mountain trout of the Rockies, except that their spots were yellow instead of black. Those that I caught bit very sluggishly, something like suckers. I was told that true mountain trout lived in the creek in summer, but ran down to the lake in the autumn, while these yellow spotted cousins of theirs stayed in the stream all the year round.

Locally these fish are known as char. Now we have learned from Mr. Mather that all our native American trout, so called, are in fact char. The difference between the two fish being that one has teeth on the vomer and the other hasn't. I have never been able to identify the vomer to my satisfaction, and I have recently forgotten whether the trout or the char have teeth there, but the item about the yellow spots rests on my responsibility.

In discussing the results of the day's shooting, Fred maintained that his .40-65 Winchester would do fully as good work as my smokeless rifle. For penetration, three of my shots had gone through the animals. One ball was found under the skin of the opposite side and one, in the large bull, lodged in the body, and we did not trace it. For shattering effect, while the balls had good stopping power, there was no extensive mashing. The head shot struck under the eye and passed back without entering the brain cavity or even cracking its walls, and the fact that one bull got up and shambled off some distance with a shot through both shoulders shows clean penetration rather than extensive crushing. The results were certainly good, but not superior, seemingly, to the work of the .40-65.

One advantage of the smaller gun is its light weight, a consideration of much moment to aged persons, and another good point is the flat trajectory. Here too, however, we must beware of exaggerations.

When one begins to speak of trajectories in a familiar way there is always a suspicion that the speaker is merely pretending to have a knowledge of an "expert" mystery. Some facts, however, are clear to a plain man. Turning to the table of trajectories in the Winchester catalogue, we find that, like all other tables of this class which I have seen, the curve is indicated by the height of the ball over the line of sight at the middle distance. This gives a quantity of information of scientific value, but what a rifleman wants to know is (when his sights are accurately adjusted for say 100yds.) how far the ball will drop below that point-blank line at distances of 150 or 200yds. or greater ranges.

Few of us are well enough acquainted with the higher mathematics to work out that problem, but a careful practical test at targets leads me to believe that the .30-30 bullet will drop at 200yds. nearly 1ft. below the line of sight adjusted for the 100yd. range. There is a margin left for individual error in that statement, but it is probably close to the fact, and when we read of a gentleman who shot game at distances varying from 100 to 425yds. with a .30-30 rifle, without changing the elevation of his gun, we may safely ascribe the result to the idiosyncrasy of the gentleman.

A few more words about penetration will end my homily on rifles. Amateurs are often deceived on this point. A .30-30 rifle ball at a range of 15 or 20ft. will make a deep hollow in a plate of ¼in. share steel, and sometimes may even pass through the plate. The same piece of steel, however, at a range of 50yds. will hardly be dented by the ball, so great is the loss of penetration in this short flight.

Practical tests show wide variations from the standard

THE ANTLERED BULL.

in this matter. I have fired a steel-pointed ball from a .30-40 rifle into an oak tree 11in. in diameter at the distance of 5ft., and the ball failed to go through, though its penetration is given as over 5oin. of pine boards.

To sum up, the .30-30 rifles are effective weapons; their best points being their light weight and comparatively flat trajectory, but they do not in all respects bear out the statements of their more enthusiastic admirers.

After staying a few days in the old lean-to, we moved our camp a few miles and pitched the tents under a great group of cedars. Fifteen or twenty giant trees stood so close together that the foliage would shed a moderate rain, and the leaf mould that we cleared away to make a safe place for the camp-fire was 1ft. thick. In the intervals of mountain climbing and in the evenings under the flame-lit canopy of the cedars I had leisure to talk with Sam about the history and manners of the Ojibways, of which tribe he was a member, and I got him to tell me some of the hero stories which he had learned in his youth. All these stories told of the doings of a wonderful man called Winneboujou, who appears under various aliases in the legends of other races of Indians, and the cycle of loosely connected tales was handed down by reciters, who often followed this profession for generations, the son taking up the task when the father died.

One of these reciters was named Wab-e-zish Kim-e-see, or old man Marten. He was so old that his hair had turned gray, and all his kindred had died except one grandson; so he traveled around with this little boy and stayed in any lodge he wished to, for he knew that he was always welcome. He often visited the grandfather of Nommace, or the Little Sturgeon (this was Sam's Indian name), and sat in the evening smoking with the men around the fire, unless he were invited in the Indian fashion to tell a story.

Once, while old man Marten was making one of these visits, Little Nommace, who was tired of sitting all the long winter evenings in the corner, decided to invite the old man to tell a story. Nommace had been working at the agency, and took half a plug of tobacco as part of his pay, for, though he was too young to use tobacco himself, he knew that he would have to get a big piece if he wanted a long story.

Then in the evening, when the men were squatting around the fire, Nommace sidled up and tied his tobacco to a lodge pole, so that it dangled right in front of old man Marten. After that the boy drew his blanket about him and went to his corner. For a polite interval old man Marten paid no attention to the tobacco, but after a time he reached up and took it. Then he cut up some of it and mixed it in a wooden trap with kinnikinnick, made from red willow bark, and when the pipes had been filled at his invitation and the men were smoking, he began the story of the flood.

"Monstrous serpents who dwelt in a cave under the river were oppressing the poor Indians, and had killed a great many of them. This made Winneboujou's heart sad and another incident made him angry. One day he saw some wolves chasing a deer. Winneboujou hurried toward them, but before he could reach them the wolves had pulled the deer down and eaten him. Then Winneboujou said to the old wolf: 'Give me one of your children that I may make him my adopted son,' and the old wolf did as he was asked, and Winneboujou warned his new son to keep away from the river where the monstrous snakes lived. But the adopted wolf was on one occasion chasing a deer that sprang into the river and swam across, and as the wolf followed after, the snakes came out and killed him, and when Winneboujou saw that the snakes had done this he was angered. So he went to the river at a place where the monsters used to crawl out of the water to sleep in the sun, and there he changed himslf into a charred and broken stump and waited for their appearance.

"When the monsters came out for their sun bath they saw the stump, and perceived that it was a new thing, for there had been no stump there before; and one of the snake chiefs, suspecting magic, said to a warrior snake, 'Go and find out whether that stump is what it appears to be or whether it is something bad.'

"The warrior snake came near and looked at the stump, but he could see nothing unnatural about it, so he decided to squeeze it hard, and if it were a living being it would have to cry out. Then he wrapped his folds around it and tightened them hard, so that Winneboujou was almost forced to groan aloud, but at last the trial finished and the snake glided away and reported that the stump was what it seemed. So the two chief serpents (for these people had twin rulers) and all the tribe stretched out and slept, and when Winneboujou saw that the last one had fallen asleep he took his bow and arrows, and creeping up he shot each of the two chiefs in the heart and fled away. But serpents have tough hearts, and these two chiefs were only wounded, and they went to their cave and sent for a wise old woman—a captive who lived in a lodge near by. The old woman came every day to see the serpents, and at each visit she put strong medicine on the wounds and worked the arrows out a little way, so that the serpents grew better daily.

"Winneboujou, however, who was lurking around to have another shot at the serpents, saw the old woman one day going along with a great bundle of banwood bark and he asked her what it was for.

"She did not know Winneboujou by sight, so she told him how she was tending the wounded serpents, and that all the snake nation were trying to kill Winneboujou, and as they could not find him they sent her to gather this bark to make cords with it; then they would stretch lines far away, and if Winneboujou stumbled on the lines or pulled them they would know where he was. The hero said nothing then, but he went daily to the old woman's lodge to ask about her patients, and when she told him they were nearly cured he became afraid, so he knocked the old woman on the head with his war club and killed her and took off her skin, and disguising himself with this he went, at the usual hour, to the cave of the snakes to see the wounded chiefs. Arriving there, he put some very strong, bad medicine on the wounds and instead of pulling the arrows out, he pushed them far in until the chiefs both died. Then Winneboujou fled a great way. Certain of the snakes went to the old woman's lodge and found her skinless body and knew that Winneboujou had killed their chiefs disguised as the old woman, but though they searched after him they could not find him. So the nation of the snakes sent messengers to stretch cords throughout the whole earth as the old woman had described, and it so happened that Winneboujou saw one of these cords and pulled it very hard, and the serpents felt the pull and were able to tell that he was a great way off; so far off they could never hope to catch him. Therefore they decided that the only way to kill Winneboujou was to make a flood big enough to cover the most distant parts of the earth and drown him. So they went to their cave and loosed the waters, and the waters rose and spread far and wide, and Winneboujou, when he saw the flood coming, went up a mountain, and as the water followed close, he climbed a tree on top of the mountain, and when the water reached him here he called to the

CARIBOU LAND.

tree to grow higher, and the tree shot up, but the water still followed; and the tree towered up a second and a third time at his bidding, but at last it became tired and could grow no more.

"Then Winneboujou said to the beaver, 'Dive and bring me up earth,' and the beaver dived, but it was so far to the bottom that he got drowned before he reached the earth and floated up dead. The loon, too, dived at the command of Winneboujou, but he also failed to reach the bottom, and floated dead, and finally the muskrat dived on the same errand. In a little while the muskrat's body came up to the surface near Winneboujou, and he reached out and caught it, and found some dirt on its paws, and from this dirt he made an island upon the water, and little by little he remade the whole earth."

Thus with tales of Indian wonders, and with hunting that after the first day gave us only a few grouse, the time sped fast, resting among the fragrant cedars or climbing through the yellow tamaracks until my pleasant outing came to its appointed end. H. G. Dulog.

Chat.

Charlestown, N. H., Dec. 15.—*Editor Forest and Stream:* Twenty degrees below zero at sunrise in southwestern New Hampshire does not look much like any evolution in the weather, from the good old New England winters, which some people are in the habit of bemoaning as a thing of the past! However, we had just such a "cold snap" three years ago, Dec. 14, 1895, and shall probably have many more in years to come, while almost seventy years ago I can remember a mild Christmas, without snow.

But that is not what I propose to write about, which was that I was very glad to see, about a month ago, Mr. Cheney's letter expressing his belief that the ordinary salmon of commerce and sport, the *Salmo salar*, was only a descendant of the fresh-water salmon, or *wannanish*, who in some primeval age was either crowded out of fresh water by the ice of the glacial period, or got in the habit of going to the sea on a visit, as our fashionable people go to Florida in the winter, and finding more ample food and a more equable climate, took up his residence there, until the necessities of his nature brought him back to his native fresh waters for the reproduction of his kind.

I believe I expressed my opinions on this question in Forest and Stream some years since, and I am glad to see that Mr. Cheney agrees with me.

I think we might as well discard the misnomer of "land-locked" altogether, as it was given under a misapprehension of the situation by Prof. Baird. I think this may be considered as a clear case of evolution, and is but one of those which we might see going on around us every day, if we only kept our eyes open.

Human life is too short to note any of the radical changes which are still constantly in progress, but yet those of us who can look back sixty years can note the changes in the breeds of horses and cattle, sheep and dogs, from those with which we were familiar in our boyhood. The fact is, the whole world is in a constant state of progress or evolution, and has been ever since the days of the first creation, and those days are not to be numbered by ordinary arithmetic. We have all been brought up to place too much reliance on the entire verbal accuracy and authenticity of the old Hebrew traditions, which Ezra collected from memory, after the Babylonish captivity, and to believe that the world and all its inhabitants were created, just as they now are, in some short and definite period of time. Geology has opened the volume for us within the present century, and we may read the history of untold ages in the story-book on which the Creator wrote it, and the "Testimony of the Rocks" will show the gradual progress, through untold ages, from the simple "monad" of the primitive formations to the complicated structure of the apparently perfect animal of to-day.

There is no appearance of chance in all this either; it all goes on, with an apparently steady plan of improvement, and I use the word apparent advisedly, because the time involved is too long—and our own lives too short—for us to foretell what does not appear to us. I will let Fred Mather and Col. Alexander fight out the question of the evolution of "lame ducks" and "bobtailed dogs," to which Col. Alexander now seems inclined to confine it, and assure the latter that the believer in evolution leaves nothing to chance.

That was a delightful letter of William H. Avis, a fortnight since, on squirrel shooting. It took me back many years to my young days, when I have had just such good times in the search for and pursuit of the wary and nimble game, for game he is, despite Frank Forester, and it is a good lesson in still-hunting to spend a day in the woods for gray squirrels.

If I could now recall the details, I could tell many such a story, though perhaps not quite so well as Mr. A. has done; but it is only an incident here and there that I can remember. How, after firing both barrels at the same squirrel, as I supposed, as he ran up a tree, I was astonished when I went to pick him up by a blow between my shoulders, which came from another dead squirrel which fell from the tree. How one warm autumn afternoon, after a long tramp, I had sat down under a big oak to rest, and gone to sleep, to be wakened by a scratching in the leaves near me, and saw the biggest squirrel I ever shot. It was looking for nuts, and how slowly and quietly. I raised my gun, which was lying across my knees, and happened to be pointed the right way, and by a side shot dropped him in his tracks, unconscious of what had hit him! Many more such items can I recall, but I could not now describe a day's experience.

I am glad Mr. Belknap got his gun flints, and hope he may find them useful yet. I began my shooting experience with them. Von W.

Natural History.

Foxes and their Colors.

Editor Forest and Stream:

There is very little doubt that the singular fox which your correspondent, C. M. Stark, so accurately describes is what the trade calls a cross fox. If the red patches he describes as being on the sides of the neck are the only spots of red upon it, it is a very high grade of cross. If, as is usually the case, it also has a red patch behind each shoulder, or as is often the case, has also a red patch just forward of each hip, it is a poorer grade of cross.

Cross foxes are so called not because their temper is more irascible than other foxes, but because the red patches in front of and behind each shoulder cause the black space across the shoulders and the lengthwise one along the back to assume the form of a cross.

One who handles thousands of our Maine foxes sees that there is a regular gradation from pure red to coal black. First there are red foxes having a tinge of gray on the hips or lower back. These shade up into what are called mongrels, which have quite a dark stripe along the neck and upper back, and sometimes showing quite a plain cross at the shoulders. These again almost imperceptably merge into the poorer crosses, which in turn grade up into the silver, and through many variations into pure black, with only a white tuft on the end of the tail. Two dark foxes are seldom found which are exactly alike. Some black foxes have a gray forehead, some have only a few scattering gray hairs sprinkled over the back, others have these white hairs only on the back of the neck, or hips, while some have them all over the back. Some are coal black to the middle, and then all gray on the hinder parts.

Foxes which are all black sometimes have a dull slaty or leaden color, and the fur seems lifeless; others are a shiny black, and the fur looks lively when shaken up. Those of this class are by far the most valuable.

Besides all the variations mentioned, one often sees what might be called freaks. Any large dealer usually gets a few every year of what are called Sampson foxes. These look like a red fox which has had half the length of the fur sheared or scorched off. The tail is not half the usual size, and seems more like a soldier's pompon than a fox's tail. Such skins are of no real value, and usually sell for about 25 cents, if prime. I do not know of any reason for foxes being so, as there is no such breed. One often sees only one such in a litter of six or eight. I have also seen Sampson cross foxes, and one which appeared as if it would have been a good silver if it had not been a Sampson.

I once bought a fox taken in Maine, which was pure white except the legs and backs of the ears, which were Maltese colored. I also had three one year which were more of a yellow than a red, and had patches of pure white on them, covering about one-third of the back, the coloration of a Jersey calf. In buying many thousands I have seen but these three. I have seen several of a chocolate color, and one which was a splendid red fox with about 1in. of the ends of the hair black, making the skin look black at a short distance.

In Maine the size and color seems to depend considerably on the surroundings where they live. Foxes are far more local than most people imagine, and the greater part live and die near where they are born; and though they may be driven many miles by hounds, they will return again to their old haunts. I have noticed that those taken in the open country where there are hardwood hills were bright red, while those taken on low swampy land covered with spruce and fir and gray birch were usually more dingy and apt to be grayish on the hips.

The foxes all along the eastern coast, where they go down on the beaches to feed, are much larger and more heavily furred than those taken inland. As one goes further east this is more noticeable. Those taken in some parts of Nova Scotia, and along the north shore of the Bay de Chaleur, near Gaspè, are larger and heavier furred than any we ever get in Maine. As one goes north the proportion of dark foxes increases till they merge into the blue foxes, and they in turn in the extreme north are replaced by the pure white arctic fox.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

There is no more lastingly appreciated holiday gift than a good book. For one who is interested in outdoor sports the volume may well be one of those included in the "Forest and Stream's" list. And do not forget to order in good season.

Game Wardens' Uniform Law Convention.

CHICAGO, Ill., Dec. 12.—Pursuant to the call of the chairman, Sen. J. Herbert Green, of Milwaukee, Wis., there assembled to-day at the Great Northern Hotel, in this city, the committee chosen last February to act in the matter of a uniform game law for the States of North Dakota, Minnesota, Wisconsin, Michigan and Illinois, as proposed at the game wardens' convention, held at this city last February, in which the above States had representation. This original convention was fully reported at the time in FOREST AND STREAM, and attracted much attention all over the country as being the most intelligent and advanced movement for the improvement of Western game laws which has ever yet been made. The convention of last winter was distinguished above all things for its common sense. There was a marked absence of all sweeping proposals and of all freak measures. The men who met here at that time represented the most advanced thought on protective matters in their respective States, but none the less stood for conservatism and care. The best features of the laws of the different States were brought forward and discussed, and a series of resolutions were adopted recommending the drafting of a bill uniform for all the several States, and containing those features which seemed to be generally applicable and generally desirable. The resolutions adopted were referred to the present committee for consideration. The present meeting is the result of the organization of such committee. There were present to-day Sen. J. Herbert Green, of Milwaukee, Wis.; Mr. C. E. Whelan, mayor of Madison, Wis., and Assistant State's Attorney; Mr. A. L. Lakey, of Kalamazoo, Mich.; Mr. F. C. Chamberlin, of Ironwood, Mich., chairman of the original legislative committee; Mr. S. F. Fullerton, executive agent of the Minnesota State Fish and Game Commission; Mr. George E. Bowers, State game warden of North Dakota. Col. C. E. Felton, of the Illinois committee, was not present, having a misunderstanding as to the time of the meeting, but Chicago was represented by Mr. Exline, attorney for Warden Loveday, of Illinois, and by Mr. Alex. White, of Chicago. Warden Loveday was out of the city and unable to return in time. Mr. Fullerton was called to the secretary's chair.

It will not be necessary to take up the original draft of the resolutions, but there is given the full text of the measures advocated by these interstate representatives, the corrected text alone shown. It is the understanding that, acting on these recommendations, as shown below, Attorney Whelan, of Wisconsin, will draft a bill in proper legal form, which will be presented later to the Legislatures of the States represented. It is thought that the draft below will prove of interest to the readers of FOREST AND STREAM, as showing what is thought to be the best and most practical game law possible at the present date for the five States above mentioned.

Discussion was taken up section by section, but the action was rapid. The first five sections were adopted with little discussion. The section on labeling packages of game in such way as to disclose the nature of their contents brought out hearty confirmation. Minnesota once had such a clause, but repealed it two years ago, and has missed it since. The section on common carriers was also very important, and brought out much of a positive nature bearing on the question of the sale of game. Mr. Fullerton said: "If we have the common carriers with us we can save a great quantity of game, and if we have them under control we can control the market." Mr. Fullerton's idea is that anything looking toward the abolishment of the sale of game, or its free handling, is a step in the right direction. The next following section, giving officers the right of search, was another one which was much approved. Section 9, on the violation of non-export laws, was adopted without discussion of consequence. Section 10, taking up the right to follow contraband game, received full discussion. This measure was called of doubtful constitutionality. Mr. Whelan thought that under the theory that the game was the property of the State such a law would hold all right. "Yes," said Mr. Exline, "it is the same as when I follow a stolen horse into another State and invoke the local laws bearing on property rights." This was carried with the full understanding of its consequences in regard to game shipping. Still more thorough and more in accord with the idea of stopping the sale of game was the clause bearing on cold storage possession of game. If this law is placed on the statute books of these five States it will be a merry time for the dealers.

The question of spring shooting was passed without opposition, and it probably will be adopted in all of these States except Illinois, where it is an impossibility at present. The question of deer seasons and deer shipping brought out long discussion among the wardens. It was admitted that the non-export laws are violated. Mr. Exline said that he knew of one house in Chicago that got $7,000 worth of Minnesota venison at one shipment. Mr. Fullerton said, "If I could appoint your warden as my agent, as our law proposes, you see you could seize that venison for me without any trouble." It was recommended as a rider to this clause, that the sale of venison should be prohibited in the first five days of the open season.

The matter of the State's ownership in its own game was taken up at length, and the action on this matter is unquestionably of the greatest importance. If this becomes a law it will bring into force the right to follow and seize this game wherever it may be detected. This principle, backed by a good law governing the common carriers, and the right of search given to deputies, would cripple the illegal game business to a very great extent. Sections 16 and 17 take up the allied matters of contraband game and interstate shipments. This is really the most important part of the work done, and if even half of it ever gets into the laws of these five States, the work of this convention will have been wonderfully successful and efficacious.

The question of State licenses arose on the matter of deer licenses only, but under Mr. Lakey's motion took a shoot which may place it without the realm of absolute conservatism, although it is along the line of the present tendency of Western game laws. I believe the license law idea has come to stay. It will come before the Illinois Legislature this winter. As recommended by the committee to-day, the law would be made to require a $1 license for any kind of shooting by a resident, and a $25 license for any kind of shooting by a non-resident of the State where the shooting is done. I question whether so sweeping a measure can be passed. Should it be passed, it would undoubtedly create a large fund for protective work, just as it has in North Dakota, according to Mr. Bowers' statement; but while it would be good for protectors, I am inclined to think it would be very bad for the game, as it would almost certainly make both local and non-resident shooters more eager to get their money's worth of game.

Propagation of fish and State stocking came up for brief consideration. There then came up the difficult question of open seasons on feathered game. It was found pretty hard to get sweeping dates arranged which should cover prairie chickens, grouse and quail. Mr. Bowers thought Sept. 1 would be right for chickens in North Dakota. Of course, this would be too early for ruffed grouse or quail. Mr. Lakey wished to make the fall dates Oct. 15—Dec. 15. This might do for Michigan, which has a term of years close season on chickens. It would not do in any of the States where there are numbers of chickens left, and could not be passed as a law. Mr. Lakey's motion was lost. There was considerable pondering over these matters, and finally at the suggestion of Mr. Whelan, of Wisconsin, it was decided to refer back these more or less local matters to the Legislatures of the different States, with the understanding that it would be better not to jeopardize the larger and more mutual features of the bill by standing on some date which would not be accentable in some particular State. This practically closed the meeting of the committee.

Space at this time does not offer for further discussion of the measures recommended by this committee. The tendency is unquestionably good. The sense of the meeting shows that year by year popular sentiment is attesting the soundness of the FOREST AND STREAM Platform. Stop the Sale of Game. The following of contraband game, the ownership of game by the State, the regulations of the common carriers, the right of search without warrant, are all things which we may well call nails in the FOREST AND STREAM Platform Plank. Drive those nails and the plank will stay. So far, therefore, it may be said that the action of this committee is above reproach, as indeed it is in every particular. The question of State licenses for shooters is a thing which will have to be worked out in actual experience. Whatever may be the result of this, it is certain that the men who have gone on record as shown below are entitled to the thanks of all sportsmen for the intelligent care which they have given to these questions. Now comes the matter of the drafted bill and its handling by the separate Legislatures. We have all a right to hope, at least, that these Legislatures will go far toward accepting the advice of these men, who constitute the most expert talent we have in protective matters in the West. The following is the text as finally adopted:

A BILL

For the Protection of Fish and Game and providing Uniform Laws relative thereto.

Section 1. It shall be unlawful and prohibited to take, catch or kill, or attempt to take, catch or kill in any manner or by any means whatsoever, in the waters of Lake Michigan or Lake Superior, or any waters tributary thereto, any whitefish or lake trout from and after the fourteenth day of October in each year and up to and including the succeeding thirtieth day of November. Any person violating the provisions of this section shall, upon conviction thereof, be punished by a fine of not less than ten nor more than one hundred dollars, or by imprisonment in the county jail not less than thirty nor more than ninety days, or by both such fine and imprisonment.

Section 2. It shall be unlawful and is prohibited to fish for, take, catch or kill by any means or device whatsoever any fish of any variety within four hundred feet of any dam or similar obstruction. Any person violating the provisions of this section shall be punished by a fine of not less than ten nor more than fifty dollars, or by imprisonment in the county jail not less than ten nor more than thirty days, or by both such fine and imprisonment.

Section 3. It shall be unlawful and is prohibited to take, catch or kill or have in possession or offer for sale, any fish of the following varieties of the length herein specified: Black bass, eleven inches; white, striped or rock bass, six inches; black, river or white crappie, eight inches; wall-eyed pike, fifteen inches; pike or pickerel, eighteen inches; brook trout, or any other variety of trout except lake trout, six inches. Any person violating the provisions of this section shall, upon conviction thereof, be punished by fine of not less than ten dollars, nor more than fifty dollars, or by imprisonment in the county jail not less than ten nor more than sixty days, or by both such fine and imprisonment.

Section 4. It shall be unlawful to take, catch or kill, or have in possession, any whitefish or lake trout of the weight of less than one and one-half pounds dressed, or two pounds round. Any person violating the provisions of this section shall be punished by a fine of not less than ten dollars, nor more than fifty dollars, or by imprisonment in the county jail not less than ten days, nor more than sixty days.

Section 5. It is hereby required that any and all packages containing fish or game shall be labeled in plain letters on the address side of the package, so as to disclose the fact that said package contains fish or game, and the nature of the said fish or game so contained in said package. Any person who shall deliver to a common carrier for transportation any package or parcel containing fish or game, which said package or parcel shall not be so labelled as herein required, or who shall place upon said package or parcel a false statement as to the contents thereof, shall be punished by a fine of not less than twenty-five nor more than one hundred dollars, or by imprisonment in the county jail not less than thirty days, nor more than ninety days, or by both such fine and imprisonment.

Section 6. Every person delivering to a common carrier a package or parcel containing fish or game shall place upon said package the name and address of the owner or consignor of said package or parcel. Any person violating the provisions of this section shall, upon conviction thereof, be punished by fine of not less than ten dollars, nor more than fifty dollars.

Section 7. It shall be unlawful and is hereby prohibited for any common carrier or any agent, servant or employee of a common carrier, to receive for transportation and transport any package or parcel containing fish or game unless the same shall be labelled as provided in sections 6 and 7 of this act. Any person, firm or corporatnon violating the provisions of this section shall be required to forfeit to the State of —— a sum not less than twenty-five dollars nor more than one hundred dollars, in the discretion of the court.

Section 8. It is hereby made the duty of every common carrier, agent, servant or employee thereof, to permit any officer charged with the enforcement of laws for the protection of fish and game to examine and open any package or parcel in the possession of said common carrier, or agent, servant or employee thereof, which the said officer so charged with the enforcement of said laws shall suspect or has reasons to believe contains fish or game protected by the laws of the State, and not entitled under such law to be transported, or when the said officer shall suspect or have reason to believe that the said package or parcel is falsely labelled. Any person, firm or corporation refusing to an officer charged with the enforcement of the fish and game laws permission to examine or open any such package or parcel, or shall in any manner impede such action by the said officer, shall forfeit to the State of —— a sum not less than fifty dollars, nor more than one hundred and fifty dollars, in the discretion of the court.

Section 9. It shall be unlawful and is hereby prohibited for any person, firm or corporation acting as common carrier to bring into this State any fish or game from any State during the time that such other State prohibits the transportation of such fish or game from said State to a point without the same. Any person, firm or corporation violating the provisions of this section shall be required to forfeit to the State the sum of not less than twenty-five dollars nor more than one hundred dollars, in the discretion of the court.

Section 10. Any officer of any other State who is by the laws of said State authorized or directed to enforce the fish and game laws of said State is hereby designated and declared an agent of said State within this State. And it shall be lawful for said officer to follow any fish or game unlawfully shipped or taken from his State into this State, and seize the same, and convey the same back to his own State, and so far as concerns said fish or game so shipped or brought from said State into this State, the laws of the State from which the same was brought into this State shall be declared to be and are hereby constituted the laws of this State concerning such fish or game. And transportation companies are hereby authorized to deliver to such officer of another State, upon submission of proper proof of his official capacity, any fish or game so demanded or seized by him, and he, the said officer, is hereby authorized to take with him such fish or game within this State, in accordance with the laws of the State from which the same was shipped, such disposition to be made under the supervision of an officer of this State authorized and directed to enforce fish and game laws, and the expenses of such officer for his assistance shall be made a lien upon such fish or game, or the proceeds thereof.

Section 11. It shall be unlawful and is prohibited to have in possession during the close season therefor, any fish or game, whether the same shall have been lawfully or unlawfully taken, and it is hereby made the duty of any owner or occupant of any cold storage warehouse or building to permit the entry and examination of the premises by any officer authorized to enforce fish and game laws. And the said owner, occupant, or agent or servant, or employee thereof, shall deliver to said officer or agent any fish or game in his possession during the close season therefor, whether the same shall have been taken lawfully or unlawfully. Any person who shall have in his possession or under his control any fish or game protected by the laws of this State, or who shall refuse to permit any officer charged with the enforcement of fish and game laws entry into any cold storage warehouse, and possession of any fish or game therein contained, during the close season for such fish or game, shall be punished by a fine of not less than fifty dollars, nor more than one hundred and fifty dollars, or imprisonment in the county jail not less than sixty days nor more than four months, or by both such fine and imprisonment.

Section 12. It shall be unlawful and is prohibited to hunt for, take, catch or kill, in any manner, any aquatic fowl, including snipe, from January in each year up to first day of September in each year. Any person violating the provisions of this section shall be punished by a fine not less than ten dollars nor more than fifty dollars, or by imprisonment in the county jail not less than ten days nor more than sixty days.

Section 13. It shall be unlawful and is prohibited to hunt for, take, catch or kill any deer, buck, doe or fawn, between the twentieth day of November and the first day of November of the year following. Any person violating the provisions of this section shall be punished by a fine of not less than twenty-five dollars nor more than one hundred dollars, or by imprisonment in the county jail not less than two months nor more than six months, or by both such fine and imprisonment, in the discretion of the court; provided that for five days succeeding the close season for the hunting of deer, buck, doe and fawn, as herein specified, said deer may be had in possession for the purpose of disposing of the same. [Recommended to stop sale also in first five days of season.]

Section 14. The ownership and title to all fish and game in the State of —— is hereby declared to be in the State, and no fish or game shall be caught, taken or killed in any manner, or at any time, or had in possession, except the person so catching, taking, killing or having in possession shall consent that the title to said fish and game shall be and remain in the State of —— for the purpose of regulating and controlling the use and disposition of the same after such catching, taking or killing. The catching, taking, killing, or having in possession of fish and game at any time, or in any manner, or by any person, shall be deemed a consent of said person that the title of the State shall be and remain in the State for said purpose of regulating the use and dispostion of the same, and said possession shall be a consent to such title in the State, whether said fish or game were taken within or without this State.

Section 15. It shall be unlawful, and is hereby prohibited, to hunt for, take, catch or kill any deer, buck, doe, at any time, or in any manner, except the person so hunting for, taking, catching or killing such deer, buck, doe, shall at the time of such hunting for taking, catching or killing have in his possession, duly issued to him, a license, as herein provided. All persons not resident of this State, who shall hunt for, take, catch or kill any deer, buck or doe, shall first procure from the Secretary of State a license duly authorizing such hunting, taking, catching or killing of deer, for the year only in which such license is issued and for and during only the open season for the hunting, taking, catching or killing of deer, buck or doe as by law provided. The fee to be paid to the Secretary of State upon application for such license shall be the sum of twenty-five dollars. All persons residents of this State, who shall hunt for, take, catch or kill any deer, buck or doe, shall first procure from the county clerk of the county in which they desire to hunt for, take, catch or kill deer, a license duly authorizing such hunting, taking, catching or killing of deer, for the year only in which such license is issued, and for and during only the open season for the hunting, taking, catching or killing of deer, buck or doe, as by law provided. The fee to be paid to said county clerk upon application for such license shall be the sum of one dollar. Such license shall entitle the holder thereof to hunt for, take, catch or kill deer, buck or doe in any part of this State, at the time provided by law for such hunting for, taking, catching or killing. [This section was ordered amended to cover "all game hunted" beside deer, on a basis of $1 for resident license and $25 non-resident. The measure will be drafted.]

Section 16. The State game warden, or his deputy of every other State, is hereby designated the agent of this State for the taking possession of, seizing, holding and disposing of any fish or game protected by the laws of this State.

Section 17. It shall be unlawful and is prohibited for any person, firm or corporation, or common carrier, to ship into or through this State, from any other State, any fish or game prohibited by the laws of said State, to be shipped or transported, and it shall be the duty of the State fish and game warden of this State, or his deputy, to seize, hold and dispose of, according to the laws of this State, any fish or game brought into or shipped into this State, or carried through, or attempting to be carried through this State, prohibited to be so shipped or transported by the laws of any other State, and further to dispose of the same according to the laws of this State.

Section 18. The Commissioners of Fisheries shall have power and are authorized to take fish at all seasons of the year from the outlying waters of the State for stocking other waters or for the purpose of securing eggs for artificial propagation; and shall dispose of said fish in such manner as they deem to be the best interest of the State; provided, however, that no such fish shall be taken except in the presence of the superintendent of fisheries or his agent, authorized in writing.

Detailed Action.

Moved by Mr. Lakey that the license law include all game hunted, $25 for non-resident and $1 for resident. Carried.

Moved by Mr. Lakey that the open season on quail and partridge be Oct. 15 to Dec. 15. Lost.

Moved by Mr. Whelan that the seasons on feathered game be referred to the Legislatures of the respective States represented. Carried.

Moved by Mr. Chamberlin that an amendment be recommended to Section 13, prohibiting sale of deer during first five days of open season. Carried.

Moved that Mr. Whelan have power to amend Section 16 in his draft of bill, it to include deputies as well as State wardens as agents. Carried.

The following resolutions of respect were by rising vote passed upon the death of Mr. E. H. Shorb, late of Van Wert, Ohio, delegate to the first meeting of the committee, and a man prominent in acclimatization work in Ohio.

Resolved, That this committee learns with regret of the death of E. H. Shorb, of the State of Ohio, whose interest in the preservation of fish and game, and whose work in the Ohio State pheasantry had brought to him a national reputation. We take this means of paying a tribute to his memory, and commend those dear to him to the blessing of Almighty God.

Vote of thanks to hotel.

Adjourned, subject to call of president.

E. Hough.

1200 Boyce Building, Chicago, Ill.

CHICAGO AND THE WEST.

A Christmas Idyll.

On the afternoon of Dec. 24, 898—something like a thousand years ago, though I have not the exact date about me—there rode forth from the castle of Weisnitvo, upon the banks of the Umtara River, two noble knights. It was in the daytime, but they were knights, and this goes. One of them was Right Sir Ronald Buckstone, of Buckstonehurst, the other the Duke of Goodenough. Their proud and haughty glances shot from the visors of their helmets like long hair through a broken hat, but as they rode along—for they were on horseback—they conversed in the low, well modulated tones of good society. pair of steel pajamas, warranted not to bag at the knee, surmounted by a coat of triple plate, guaranteed for twenty years. At the saddle bow of each hung the trusted can opener, which at that time was indispensable in war. Once within his steel pajamas the bold knight might bid defiance to the world. Across each saddle hung the weapon of the chase, the goodly crossbow, chokebored for extra range. Need the writer say that these pieces were exquisite specimens of the engravers' art? Nay, for these were knights, and none warmer ever let portcullis fall or drew sigh for Mariana of the meated grange. By this it should not be supposed that they were grangers, for such was not the case.

Nor must we forget the dogs which trotted at their horses' heels. Sir Ronald was commonly reputed to have exchanged a hundred fair acres of suburban property for the proud treasure known as Vite-Courri, the descendant of the most exalted and kingly blood of dog. Sir Ronald's wife had spent many years in embroidering the pedigree of this noble animal upon a square of tapestry. An almost equal value was attached by the Duke of Goodenough to his own dog, Sloppy Weather.

Vite-Courri was slight and graceful as a fawn, though Sloppy Weather was coarse and hard of mien. As the noble knights rode on together, Vite-Courri ever and anon skipped and ducked as the horses stepped near to him. Upon the other hand, Sloppy Weather, when betimes trodden under the iron heel of the great charger, made no outcry, but calmly bit the other leg of the horse until he was fain step off again.

The two knights rode on, as has been said, and for a time there fell a silence upon the scene, over which, it has been neglected to state, there hung the crisp October air. It was nearly Christmas, but October goes, because this was an ideal day of sport.

So intent were the two noble knights on the keen pleasures that lay before them that they became for a moment silent, nothing being heard but the champing of the bits of the two chargers, and the deep, heavy sound of Sloppy Weather's feet withdrawing from the wayside mud. It was now nigh on Christmas Eve, and these two had sallied forth to see what might be done, for many guests were bidden for the morrow, and the castle was out of meat. The reader would not know, as he cast his eye upon the lines—he would not know unless I told him—that there was upon the morrow to be a wedding of degree within the walls of the castle of Weisnitvo. The Duke of Goodenough was plighted by the honor of his knightly word on the morrow to wed Esmeralda, the beautiful daughter of Sir Ronald, and owner of the fief of Weisnitvo. He was to be the happy bridegroom at that coming event, and Sir Ronald had his eye upon him, lest he should slip away to some Crusade. This was in the time of the Crusades, and the eight-hour-a-day movement had not yet begun, so that often noble knights worked overtime going to Crusades, and forgot to come back home, they were so anxious about Jerusalem. Jerusalem has always shown itself able to take care of itself, but they didn't seem to realize it then.

"By our lady," said Sir Ronald, "'tis slovely weather."

"Marry, thou sayest well, Sir Ronald," replied the Duke, as he reached around to the western portion of his steel trousers and hauled forth a noble plug of choice chewing, such as only the nobility could purchase for a nickel. "Truly, thou sayest well. If fortune and the good saints fail us not, we shall slay abundance for the coming home at eventide."

"Gadzooks, there shall be plenty for the wedding feast, good sir, methinks," said the former speaker. "It will be a corker—what?"

"Even so," remarked the noble Duke. "If my good crossbow fail me not, meseems meself shall kill thirty straight to-day, even though they put me in the A class for it."

"Prithee, say not so," said Sir Ronald. "Never didst thou kill so many by half without missing. Saw I not—"

"No—I mean nay," said the Duke hastily. "By my halidome, thou liest!"

"Sirrah," said Sir Ronald, in low, refined tones, "wert thou not to be my son-in-law, and if I did not owe thee for two months rent, these words had else been thy last. Yet forsooth, to my mind thou wert ever a most indifferent shot."

"By cock and pie, thou vagrom!" cried the stout Goodenough, "I an indifferent shot! Marry, beshrew me, bethinkest thou not, how but yestreen, as we passed the narrow wood, the skein of wildswan rose and passed an hundred paces to our left? Sawest thou not me bolt pierce the heart of the foremost bird—yea, even though me aim was on the hindermost? I an indifferent shot! Why, sirrah, I call that skill such as thou mayest never compass."

"It was not ever thus," muttered Sir Ronald in his beard, with a deep, hollow laugh, whose iciness caused frost to form upon his visor. Yet, as he bethought him of the unpaid rent he paused and softened his tones.

"Nay, me good Duke," said he, "it ill beseems us to have a difference, who are so soon to become kin. As token of me friendship, I may give to thee some proof; though, perhaps, 'twere well not to violate secrets of the tenderer sex."

"And what may that be, Sir Ronald?"

"None less than this: The fair Esmeralda hath embroidered thee a pedigree, which she herself, with her fair hands, will present to thee upon the wedding morn as token of her love!"

"Perhaps, Sir Ronald, the lineage of thine own race? I thought as much."

"Nay, not so, me noble Duke, but that which shall count to near as much. The pedigree of a dog such—"

"Oh, joy, joy!" exclaimed the Duke of Goodenough. "The fair Esmeralda hath worked a sampler recording the pedigree of Sloppy Weather, me own good hound! Now may the saints be praised! I had oft wished it framed to hang by me bedside, that first at morn me eyes might rest thereon."

The whiskers of Sir Ronald curled tightly under his helmet, and his voice shook with emotion as he replied:

"Sirrah, the fair Esmeralda is too busy down town each day to monkey with the obscure birth of a mere cur of low degree. What dog could I mean else than Vite-Courri, the noblest of his kind!"

"Vite-Courri! Vite-Courri? That misfit, slabsided, lathy, splay-foot, weak-backed pigmy?" said the Duke in calm, measured accents. "Surely thou jestest with me. What should mortal man concern himself with the pedigree of that worthless wiffet, fit but to course the rabbit to his warren, or catch flies within me castle chamber?"

Sir Ronald's breath sounded as though drawn between barbed wire, and all he could articulate was, "Draw, sir, and lay on!" He forgot the rent.

So they lay on, their good swords making large dents in their Sunday clothes. Large sparks flew off their helmets, and set fire to the grass, so that they fought in the midst of a sea of flames, yet never did either falter. "Vite-Courri! St. George! A rescue!" was the war cry of Sir Ronald, and to this the stout Duke made answer: "Sloppy, Sloppy, Slop! Rah-rah-rah!" It was an awful fight. The good sword of Sir Ronald, glancing from the projecting eaves of the Duke's shoulder piece, shore sternly down his back, and so fell was the force with which the blow was sped that there was a crash as of splintered glass, and a cry of agony rushed to the stout Duke's lips as he felt a rich, warm fluid rush forth and stain his saddle skirt.

"Ha! ha," cried Sir Ronald through his set teeth. "Die, traitor!"

"Not on your life!" hissed the Duke between his crossbars. "Yet ever will I hold this grudge against thee, that thou didst spill the whisky, cruel knight!"

Now, whether it was this thought that unnerved the valor of the Duke, or whether it struck remorse to the heart of the hot Sir Ronald, from that time their blows grew fainter, as of those losing heart, and presently they called a truce and leaned panting on their swords. They were too tired to fight, but as all true lovers of the dog, they still could talk and exchange pleasantries.

"Liar!" hissed the Duke.

"Hound! Foul Saracen and son of seven foul Saracens!"

"Neither!" said the Duke, who was a bit off condition and short of breath.

"Ill moved the stars that saw thee born!" said Sir Ronald. "Vite-Courri, the grandest—well set up—stands over ground—ears set on—coat perfect—pedigree twelve generations back to Jupe-Phoebe! Ach Gott! thou ass, thou unspeakable idiot and ass! Vite-Courri hath won twice a score of prizes in the stricken ring. He hath won blue ribbons till the women folk have to make carpet rags of it! Vite-Courri—"

"Vite-Courri be blest, and all like him!" said the stout Duke. "The judge that would place him is an ass, and of a family of asses thrice refined. Sirrah, the dog is but a mongrel beside Sloppy Weather. See but the bone and barrel. Note the sweep of his hind leg, and see the firmness of his stride. Not with ease is he to be tripped up, I warrant thee! And when he retrieves—"

"Marry, thou sayest it," said Sir Ronald. "In our best circles we retrieve not, for 'tis held passing vulgar."

"Vulgar! Vulgar?" cried the Duke. "Now, by our lady of K. K. C., 'tis all off with the marriage! Thou mayst take thy daughter, and as for me, I shall collect the rent though it cost thee thy uttermost farthing, foul knight. Hearest it well? I say 'tis off! Ha, ha!"

A bitter paleness fell upon the face of the brave Sir Ronald, but he was game. "Sirrah," said he, "the knight who marries the fair Esmeralda takes the sampler of Vite-Courri, or he don't get the girl, and that settles it. There ain't no dog like him. I have been offered 9,000 broad pieces of eight for him."

"You wouldn't take $30 for him, though, would you?" sneered the Duke.

"What's that?" said the good Sir Ronald.

"I said I'd hate to offer you $25 for him."

"Dost thou thus offer?" said Sir Ronald, his voice trembling with concealed emotion.

"Well, yes," replied the Duke. "I have money to burn in my business. Here is your gold." And he drew forth from his pants a roll of bills and counted out the price last above named.

Sir Ronald took the gold with trembling hand. "I—what'll you have?" said he. "And why, may I awsk, didst thou thus sudden change? Why didst thou covet Vite-Courri?"

Stout Goodenough laughed loud and bitterly. "White me a bill of sale," said he, "and when the dog hath been wonted, so that he may follow his new mawster, methinks I know a sausage mill that mayhap will retire him from circulation."

A shuddering, gurgling sob burst from Sir Ronald's lips, as he fell forward upon the green sward. (I forgot to state that they had dismounted and were now on the green sward.) The stout Duke looked upon the prostrate form of his late antagonist. A low, deep laugh broke from his set face. "'Tis well," said he, "'tis well. Come hither, Sloppy Weather, pup, for we are the real thing!"

The sun cast a last reluctant glance at this scene, but being obliged to keep its schedule, sank behind the hill which had been placed there for that purpose. The deep twilight fell, since it could stand the suspense no longer. Darkness crept on apace, because it was no longer daytime. Night was coming. A solemn owl hooted in a neighboring broken tower. A few purling, creakling frogs began to pipe their lay, and the harsh strident notes of a katydid cut keenly on the moist, dank gloaming. But ever the stout Duke gazed down upon his foe and laughed a deep, hollow laugh. They who had once been friends had come to blows because of differences regarding dog. 'Twas ever thus, and is even so to-day, except that men do not come to blows, but war only with their tongues.

The scene, as above remarked, remained unchanged, the gloaming only growing a little more gloomy. The silence deepened, save only that near at hand Sloppy Weather pulled burrs from 'twixt his toes. And far away over the darkened landscape came the dull, muffled sound of the fair Esmeralda splitting kindling wood for the wedding feast that was ne'er to be.

There is no moral to this simple tale, for morals are not artistic.

Giant Moose.

There is now in process of mounting at the Chicago Academy of Sciences one of the giant Alaska moose of which we are beginning to hear so much, the specimen being the gift of George H. Laflin, who purchased it of C. F. Periolat, a furrier. The measurements of this specimen are as given below, though I have not been able to verify them. The antler spread borders on the phenomenal. Length from tip of nose to hind hoof, 16ft. 5in.; height, 7ft. 4in.; around neck, largest part, 6ft. 3in.; tip to tip of ear, 32½in.; around lip, with mouth open, 44in.; around muzzle, 28in.; antlers, inside measurement, 50¼in.; width of palms, 20in.; extreme spread of antlers, 74¼in.

Colorado Big Game.

Game Warden Swan, of Colorado, estimates that in his State there are 100,000 deer, 25,000 antelope and 7,000 elk. Warden Swan makes some very practical suggestions in regard to improvements in the Colorado game law.

The Zoological Gardens of Denver, Colo., now have but one buffalo. Arrangements are making for securing sixteen buffalo and eighteen elk and deer for these gardens.

Washington Birds.

Mr. Frank Alling, who has stocked Fox Island of the Puget Sound country with Chinese pheasants, has now undertaken the importation of black cock, junkle fowls and wild peacock. All these Asiatic birds are experiments, just as the Mongolian pheasant was an experiment, but should they prove so successful as the latter bird, the sportsmen of the northwest coast will have cause for congratulation.

Oregon Game.

Ex-Warden McGuire, of Oregon, in his report mentions with regret the diminution in numbers of the Mongolian pheasant. The history of this bird in Oregon is well known. Protected, it increased with wonderful rapidity, and gave abundance for all. Pursued in and out of season by market shooters and insatiate sportsmen, it has begun to share the fate of our native game birds, and the supply is rapidly being cut down. Mr. McGuire recommends a daily limit of twelve to twenty birds. This is enough.

Elk in Missouri.

From the Kansas City Star I take the very interesting and remarkable statement that early in this month Mr. Walter S. Halliwell, of Kansas City, killed an elk in the Ozark Mountains of southwestern Missouri, where he is a member of a club controlling a large preserve. The party killed six deer, one elk and a number of wild turkeys. It is said that this elk is the first killed in Missouri in many years; but that two others have been seen in that region. The animal was thought to be a seven-year-old, and weighed 1,150lbs. The antlers were 5ft. 6in. from tip to tip. I have often talked with men who have killed elk in the Indian Territory, but I had no idea that one of these animals was left alive in Missouri, even in the wild Ozarks.

The Small Bore.

One of the interesting facts in the big lion hunt at De Beque, Colo., is the fact that nearly all the hunters were armed with the small bore nitro rifles. The black powder rifle is pronounced to be very infrequent among the couple of hundred men who have been scouring the mountains in that part of Colorado.

A Careful Hunter.

A dispatch from Sault Ste. Marie, Mich., states that a Grand Rapids hunter this fall came upon a couple of fighting bucks whose antlers were locked. A prong of the antler of one of the bucks had pierced the eye of his antagonist, passed back through the bone of the head and come out in the mouth. The animal was nearly dead at the time the two were discovered. The hunter killed both bucks, and then spent considerable time in carefully prying apart the locked horns. I presume he could not put them together again for a thousand dollars.

Michigan Violators.

Warden Osborne, of Michigan, reports forty arrests made in November, twenty for violating fish laws and twenty for violation of the game laws. There were eighteen convictions, seventeen cases still pending.

Minnesota Indian Troubles.

They have been having a good deal of trouble with the red men out in Minnesota this fall, but a just look at the situation seems to warrant the belief that the Indian is not alone to blame for the state of affairs. This is well set forth in the communication which Warden Fullerton has addressed to Indian Commissioner Jones at Washington:

W. A. Jones, Commissioner Indian Affairs, Washington, D. C.—Complications have arisen again this year in regard to the Indians, of which fact I think you should be apprised. Every year, after the deer season closes, and it is unlawful to kill game in Minnesota, the traders, who I understand are licensed by the Government, hire Indians to go out and kill our deer, paying them so much per pound. The Indians realize little or nothing out of the transaction, as the traders always get the lion's share. The venison thus illegally procured is stored on the reservations and shipped out of the State when it can conveniently be done. Most of those traders are men of inferior social standing, but still they have Government licenses to trade with the Indians. They are a curse to the Indian, and I believe with the aid of the "squaw-men" they are responsible for a great deal of the trouble existing between the Indians and white men.

We therefore appeal to you as commissioner to issue instructions to your agents on the different reservations to restrain the Indians from leaving the reservations and not permit them to roam at large and slaughter our game. If some restraining power is not placed upon them there is likely to be trouble, for we are not going to allow the Indians to violate our game laws, even if some of them have to be killed to accomplish this result. If the game killed by them was for their own use the game and fish commission of Minnesota could overlook a great deal, but when in reality it is for the benefit of the class of men I have above referred to, we think it is time for you and your department to interfere. We have just had an encounter with fourteen Indians from Pine Point, and while there was no blood shed it might have been otherwise, and another Indian outbreak inaugurated. Now, Mr. Jones, we have laid this matter, with its possible serious results, plainly before you, and we hope we are not making this appeal to you in vain. We believe your department should take the matter of restraining the Indians from violating our game laws under serious advisement. If the Indians are amenable to our laws—game laws included—they should be compelled to respect them. If, on the other hand, they are not obliged to obey our laws, then we fail to appreciate the policy of the Government in thus affording them places of shelter to which they may retire in order to avoid possible punishment for their misdeeds.

Those are the facts in the case, which we consider of sufficient importance to call for immediate attention from your department. We are fully determined to protect our game at whatever cost from wanton destruction by poaching Indians who are aided and abetted in this illegal traffic by unscrupulous traders.

S. F. FULLERTON,
Executive Agent Minnesota State Game and Fish Commission.
St. Paul, Dec. 7.

Club Elections.

The annual business meeting of Mak-Saw-Ba Shooting Club was held Monday night. The following officers were elected: President, Joseph Leiter; Vice-President, C. F. Petrie; Secretary and Treasurer, W. R. Smith; Board of Dirctors, as above, with addition of W. F. Haskell and A. E. Dyer.

Hennepin Shooting Club last Saturday elected the following officers for the ensuing year: President, W. W. McFarland; Secretary and Treasurer, G. M. Sibley; Board of Directors, F. E. Willard, N. A. Partridge and J. B. Clark. Hennepin Club has secured 200 acres more of good shooting grounds, making about 4,000 acres which it owns.

Personal.

Mr. S. F. Fullerton, State Warden of Minnesota, and Mr. George E. Bowers, State Warden of North Dakota, made the FOREST AND STREAM office pleasant visits this week. Official life seems to agree with Mr. Bowers, who weighs 217lbs., though he is active enough when it comes to chasing a non-resident who is shy a license. Mr. Fullerton says that he expects to be retired from office the first of the year, but he will continue to take interest in protection of the game of his State. Mr. Fullerton will continue to reside at St. Paul, and he has the choice of two or three lines of employment, which will be as lucrative, and perhaps more peaceful, than his late office.

Mr. Harry E. Lee, whose name has been earlier mentioned in the FOREST AND STREAM as a successful Alaskan hunter, is in this city, attending the live-bird tournament this week. Mr. Lee does a great deal of traveling in his favorite occupation of big game hunting. Next year he will go to the far North after musk ox. He then goes to South Africa after the big game of that region, wanting more especially a lion. Then he is going to India after his tiger. He says that he will not kill a tiger from an elephant, but intends to meet both his lion and his tiger in the open, and while he is on foot, if possible. The interesting story of Mr. Lee's Alaska hunt will shortly appear in the FOREST AND STREAM. In person Mr. Lee is tall and wiry, slow of speech and quiet of manner. His personal story of his trip to the Alaskan interior is most interesting. Almost month by month we hear more and more of this new and wonderful great game country. It is curious to observe that almost the first year that we do begin to hear of this region, we hear also the warning cry that its game is being exterminated. Mr. Lee advocates the establishment of a national park in the back country near the Sheep River, and he says that if this is not done the hide and head hunters will soon clean out the game. This is rather singular and impressive news. Mr. Lee was very fortunate in his hunting trip, as his story will show.

E. HOUGH.
1200 BOYCE BUILDING, Chicago, Ill.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Lacey Game Bill.

Specially reported for Forest and Stream.

WASHINGTON, D. C., Dec. 19.—Nearly a year ago Mr. Lacey, a Congressman from Iowa, introduced in the House of Representatives a bill (H. R. 3589) to extend the powers and duties of the Fish Commission to include game birds and other useful wild birds. The matter was referred to the committee on the Merchant Marine and Fisheries, and on Feb. 23 last Mr. Perkins, also from Iowa, a member of that committee, reported the bill favorably. In his report he said:

"The Commission of Fish and Fisheries has been in existence for many years, and its operations have been in a high degree successful, and to the great advantage of the people. Many streams that formerly teemed with fish had become almost or quite barren. New stock has been introduced, and the various States, recognizing the mistakes of the past, have enacted suitable laws for the protection of fish, and a healthy public sentiment has been created for their preservation and propagation.

"The destruction among the game and other useful birds has been even more ruinous than that which has overtaken our fishes, and State laws for their further protection have been very generally enacted. The desire for restocking fields and forests is quite general, and with the machinery now in the control of the Fish Commission great good could be done with but a moderate expenditure of money. The bill has been submitted to the late Fish Commissioner, and he has expressed his warm approval of its provisions.

"It is believed that birds may be successfully transferred from one part of the country to another, and there propagated and extinction of valuable species retarded or prevented. The beautiful and valuable grouse, now so plentiful in Oregon, could no doubt be successfully introduced into North Carolina and Virginia. The prairie chicken, which is becoming very scarce in the Northwest, would be welcomed with friendly enthusiasm in Eastern States, where it is now wholly unknown.

"Birds introduced by the national Government, it is believed, would be protected by quite a different state of public opinion from that which has prevailed as to birds introduced by private individuals or shooting clubs. The wild pigeon, once so abundant, has been practically, if not totally, exterminated, and many of our most valued feathered friends are becoming so scarce as to lead to fears of their early extinction. Interest manifested by the Federal Government in the further preservation and propagation of birds will go very far toward a creation of that healthy public sentiment without which all protective laws are inoperative.

"The farmers generally have become earnestly interested in bird protection, and the interest in the subject is no longer confined to sporting clubs, but the general usefulness of bird life has become more fully understood by all people.

"The proposition of the bill does not involve the creation of new officials nor large expenditures, but only authorizes an existing commission to perform additional duties, and the question as to the amount of expenditures for such purpose will always be under the direct control of Congress.

"The future continuance of the efforts contemplated by the bill will depend upon the annual appropriations which may be larger or smaller as experience shall demonstrate to be wise.

"Your committee heartily concur in recommending the passage of the bill."

To-day Mr. Lacey called the bill up and moved to suspend the rules and pass it. After a brief debate, in which not a single objection was raised, the House unanimously passed the bill. The proceedings in detail, as they will appear in the Congressional Record, were as follows:

MR. LACEY: Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 3589), "to extend the powers and duties of the Commission of Fish and Fisheries to include game birds and other wild birds useful to man."

THE SPEAKER: The gentleman from Iowa moves to suspend the rules and pass a bill which the Clerk will report.

The bill was read as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States Commission of Fish and Fisheries shall hereafter be known and designated as the United States Commission of Fish, Fisheries and Birds. The duties and powers of said commission are hereby enlarged so as to include the propagation, distribution, transportation, introduction and restoration of game birds and other wild birds useful to man. For such purposes they may purchase, or cause to be captured, such game birds and other wild birds as they may require therefor, subject, however, to the laws of the various States and Territories in which they may conduct such operations.

"The object and purpose of this act is to aid in the restoration of such birds in those parts of the United States adapted thereto, where the same have become scarce or extinct, and also to aid in the introduction of new and valuable varieties or species of American or foreign birds in localities where they have not heretofore existed.

"Said commission shall from time to time collect and publish useful information as to the propagation, uses and preservation of such birds.

"And the said commission shall make and publish all needful rules and regulations for carrying out the purposes of this act, and shall expend for said purposes such sums as Congress may appropriate therefor."

THE SPEAKER: Is a second demanded?

MR. DINGLEY: I ask for a second.

MR. LACEY: I ask unanimous consent that a second may be considered as ordered.

There was no objection.

THE SPEAKER: The gentleman from Iowa has twenty minutes, and the gentleman from Maine twenty minutes.

MR. LACEY: Mr. Speaker, this bill was reported unanimously by the Committee on Merchant Marine and Fisheries last February. We have already in existence what is known as the Fish Commission, which for a great many years has been doing excellent work in the propagation and preservation of the food fishes of the United States. The machinery of the Commission is already in operation, and they have a complete system. They have employees, and after full consultation with the officers in charge of this Commission, I am assured that without additional appropriation, or with a very slight appropriation at least, they will be enabled to do a great deal of good in the line proposed by the bill. We have, for instance, in certain parts of the United States game birds, such as the prairie chickens that are found in Kansas and Nebraska. If a few of these birds were turned loose in the Shenandoah Valley or in the valleys of South Carolina or North Carolina, they would propagate there, and if turned loose by the Government, introduced by authority of the nation itself, they would receive ample protection. Interchanges of this kind can be made at a very moderate expense, and will aid in keeping alive the different varieties of birds that are now rapidly becoming extinct.

The matter was carefully considered by the committee. It has met the approval of the Audubon societies and various other societies throughout the United States which have taken the subject in hand. I believe it ought to pass unanimously. I reserve the balance of my time.

MR. DINGLEY: I asked for a second in order that I might understand what was proposed. I understand from the explanation of the gentleman from Iowa (Mr. Lacey) that it is proposed to enlarge the functions and field of the Fish Commission, so as to cover game birds.

MR. LACEY: I would suggest to my friend that the same officials in other countries, in Germany, for instance, have these enlarged powers, and the two powers run harmoniously together. They can be operated with very slight additional expense.

MR. DINGLEY: I would like to ask the gentleman if there has been any estimate made as to the possible increase of expense by thus enlarging the duties and powers of the Commission?

MR. LACEY: That will be entirely within the power of the committee on appropriations, to say whether any appropriation at all shall be granted. The theory was that the committee on appropriations would make a moderate appropriation for the purpose of trying the experiment. If it was found to be successful it might be enlarged, or if the results were unsatisfactory, it might be cut off entirely. That would be entirely within the control of Congress. This bill grants no appropriation, but merely gives the necessary power, so that the appropriations can be made without conflicting with existing laws. I think a very few thousand dollars will cover all the expense that may be necessary.

THE SPEAKER: The question is on suspending the rules and passing the bill.

The question was taken, and there being no vote in the negative, the bill was passed.

Notes from New Brunswick.

JOE MITCHELL, the veteran Indian guide, is now reposing in the county jail. Joe is one of the squarest of the Indians on the St. Mary's reservation, but like all the rest of the tribe, has lived his life in an atmosphere of sublime obliviousness as to game laws. About every fall Joe goes out to Magaguadavic Lake trapping otter. This is perhaps the best deer country in the Province, and of late moose have frequently been seen there. When Joe returned from the lake the other day he blandly informed his friends that he had shot a moose and eight deer, and wished to sell the hide of the former. Game Warden Hawthorne at once had him arraigned before Judge Marsh. The Indian pleaded guilty, evidently under the belief that his sentence would be allowed to stand, but the warden was inexorable, and the prisoner was sentenced to pay $50 for shooting a moose on the west side of the St. John River, or else go to jail for thirty days. Joe smiled pleasantly and remarked in open court: "Purty dam good wages, too—$50 for t'irty days!" and departed on a bee line for the jail. There was a big medicine talk over at the camps that night, and Jim Paul strongly advocated levying sufficient damages upon white offenders of the game laws to liberate Joe from imprisonment. But a more practical scheme than this suggested itself to the fertile brain of Gabe Bear. He would take around a big medicine paper and collect subscriptions from the pale faces generally in order to secure the release of Joe. This was carried into effect next day, and $64.30, or $14.30 more than was necessary for the purpose, was secured by the wily Gabe. Immense enthusiasm and a weird odor of the late John de Kuyper prevailed on the reservation that evening. Joe is still in jail.

Carcasses of moose from Nova Scotia came into St. John on the train the other day. They were eagerly snapped up by the hotels. Moose are still quite plentiful in Nova Scotia, but they will soon be a thing of the past if the market hunter is allowed to work his will.

William Griffin and A. C. Thomas, of Stanley, brought into town two unusually fine moose heads this week. One of them had a spread of 58in., with twenty points; the other, a measurement of 53in. Though this has been Mr. Griffin's first season as a professional guide, his success has made him envied by many of the older ones.

Sandford Bartlett, of Stanley, brought in a moose yesterday. The horns only measured 42in., but the moose was a very large and evidently very old specimen. The four quarters weighed 700lbs., and netted Mr. Bartlett $35, and he also got a good price for the head.

Dr. Heber Bishop, friend of the human race, is here, endeavoring to persuade the Government to take part in the New York show. It is said that the Government, having been compelled to pay duty upon every article shown at the Boston exhibition last year, is not enthusiastic. In order to give the honorable gentlemen time to think the whole thing over, the Doctor, with his friend, Mr. Ross, of New York, has gone into the Sisters Lakes region on a moose hunt. Their guides are Jim Paul and Herb Heal.

All these things have a tendency to remind me that good luck never deserts the chosen people. On Wednesday afternoon last Harry Atherton and your correspondent left Fredericton for a caribou hunt on the Sutherland Brook barrens. We reached camp on Thursday and were home Saturday noon with two bull caribou. These animals, by the way, seem to be more numerous in the Cains River, Little River and Gaspereaux River country than for many years. They are also very plentiful in the

Crooked Deadwater region, where Henry Braithwaite says he believes the parties guided by him could have shot a hundred caribou this fall. My own limited observation would lead me to suspect that the caribou of this Province, obeying some mysterious impulse, are now working generally to the south, just as the moose, after an absence of many years, are now commencing to recolonize the ground to the west of the St. John River.

A number of American sportsmen are now in the woods hunting moose and caribou on the snow. This is about the surest way to find game I know of. No one should try it, however, who is not reasonably proficient in traveling on snowshoes. FRANK H. RISTEEN.

FREDERICTON, Dec. 16.

The Maine Guide Law.

BOSTON, Dec. 19.—Sportsmen who have hunted in Maine are receiving a letter from the office of the Inland Commissioners of Fisheries and Game, which reads:

"AUGUSTA, Nov. —, 1898.—Dear sir: There is a likelihood of some changes in our game laws by the Legislature the coming season, and possibly along the lines of the inclosed inquiries, and believing that you, as a representative sportsman, are interested in any legislation affecting the game interests of our State, and the safety and comfort of the tourist, I beg leave to ask you to take a few moments and answer the enclosed questions, and add anything thereto that suggests itself to you, and if you can add a personal letter, we should appreciate it. Sincerely yours, L. T. Carlton, Chairman."

Then follows another page as follows:

"To the Commissioners of Inland Fisheries and Game of the State of Maine.—Gentlemen: Being attracted to the State of Maine by the unsurpassed opportunities for fishing and hunting, unequalled scenery, pleasant surroundings, invigorating air and pure water, and hoping to continue this for many years, we are naturally interested in whatever makes for the improvement of the surroundings and safety and comfort of the tourist. We had noticed the tendency of legislation in your State intended for the better protection of fish and game, as well as that of the visiting sportsmen.

"We unhesitatingly declare that it is our belief, founded upon experience and observation, that the guide law, so called, is a wise and judicious legislative act, and hope that a registered guide bearing the certificate of the Commissioners will be a safe guaranty to the stranger coming to Maine to fish and hunt, that he may safely employ such a guide. We believe that if such was the case now, it would add very materially to the peace of mind and comfort of many who come to your delightful State, and I am glad of the opportunity to answer the following questions: Would you favor a law allowing the taking of deer in the months of August and September, for food purposes only, under such rules and regulations as the Commissioners of Inland Fisheries and Game may establish, on payment of a reasonable fee to the State, for the benefit of the fish and game, for each deer so taken? Would such a law be respected by true sportsmen and true reports made? Do you think more deer would be taken then than now? Do you think that guides should be registered according to their fitness? Do you think that the Commissioners ought to have power to refuse to register men known to them to be unsafe, unreliable, not competent and whose habits are not good? Remarks."

The letter is intended to be filled out with answers to the questions and returned to Mr. Carleton.

SPECIAL.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

There is no more lastingly appreciated holiday gift than a good book. For one who is interested in outdoor sports the volume may well be one of those included in the "Forest and Stream's" list. And do not forget to order in good season.

The Salmon's Leap.

A FEW years ago, in a fishermen's nook in London, we were discussing the height to which a salmon could leap, and an Englishman stated that he had known salmon to make a clean leap of 20ft. perpendicularly. This was questioned by a Scotchman present, who said that he had been on many a salmon river, and had never yet seen the salmon that could clear 10ft. perpendicularly. Several different views were expressed upon the subject, and since that time I have taken occasion to measure falls in several rivers where salmon were leaping, for the purpose of determining how far a salmon can leap. The question allows of some elaboration, and several important factors must be taken into consideration. First, the character of the "take-off," or, in other words, the water from which the salmon starts below the falls. If he can start from a quiet, deep pool or eddy just below the falls, he can make a much higher leap than if he must start from broken water or shallow water. In some rivers salmon are much longer and slenderer than in others, and the slender salmon make much higher leaps than the more robust ones. A fresh run salmon may be so fat that he is clumsy, and not able to do his best at leaping, but after three or four weeks spent in the river he may perform some remarkable acrobatic feats. In the Washecootai River I have seen salmon thrown back time and again from a leap of about 6ft., and do not remember ever having seen a salmon make more than an 8ft. leap in that river. On the Olomana River I have seen salmon thrown back repeatedly from a leap of 10ft., but having been foiled several times in succession, these fish jumped approximately 14ft. on two occasions, and 16ft. in one instance, while I was watching them. On the Kegashka River I have seen salmon leap about 12ft., but in this river the leaping place was not where I could measure the height of the chosen spot. On the Coal River, in Newfoundland, salmon seem to have difficulty in clearing 8ft. of fall, and this is due probably to the character of the rocks beneath the fall, but as the water from which they leaped was white water, I could not see the character of the "take-off." On the north branch of the Humber River salmon were leaping very much higher with ease over falls similar in character to those of the Coal River.

The highest leaping that I have ever seen was on the first falls of the White Bear River in Labrador. The salmon in this river are not large, and the adult fish weigh quite uniformly from 8 to 10lbs.; but they are very slender, and have tremendously broad tails. A photograph of one of those salmon of 10lbs. weight placed by the side of a sea trout of 4½lbs. weight shows the breadth of tail and the more graceful outlines of the salmon of this river. I measured the height to which the salmon were leaping, approximately, by standing above the falls and letting my line run from the top of the falls into the pool below, and this line was marked with knots 3ft. apart, so that while the distances were not measured accurately, I was able to determine that most of the salmon leaping the falls at this point were making a leap of about 12ft. Salmon would occasionally leap far past this chosen spot into another chosen spot, which was approximately 18ft. from the pool below.

I photographed salmon in the air, making these two leaps, and all but two that are shown in the photographs were making the 12ft. leap. One that made the 18ft. leap is the salmon which shows largest in the photograph, as he passed in his flight very close to the projecting rock upon which I sat. The other one, making the 18ft. leap, is the one with the tail curved downward, and looking rather indistinct in the photograph. I believe that the salmon use the tail for propulsion while in the air, as most of them continue while in air the movements which they make in traveling through the water. When they are near the end of the flight the pectoral fins are spread, the tail becomes rigidly fixed and the salmon sails into the spot that he has selected for an alighting place. The photographs brought out this point.

Reducing the question to one of mechanics, we may estimate that a salmon of 10lbs. weight leaping from a still pool requires an initial velocity at the moment of leaving the water of eighteen miles an hour in order to have momentum sufficient to carry him 12ft. perpendicularly. A velocity of twenty-three miles an hour is required for carrying this same fish 18ft. perpendicularly.

ROBERT T. MORRIS.

Men I Have Fished With.

LXIV.—Spencer Fullerton Baird.

IF this brilliant scientist and most lovable man ever had an enemy it is hard to imagine what manner of man he might be. His fame was world-wide before I knew of his existence, but that was not his fault. Nor was it wholly mine, for in early life I had shaken the dust of the city from my boots and went West to trap and hunt and then to be a soldier, and so in those ten years the fame of scientific men came not my way, and yet they continued their work and the world went its usual round, as it may continue to do after we have all played our little parts, and strutted our brief hour upon the stage. Prof. Baird did not burst on me in a blaze of glory; he dawned on my benighted intellect and enlarged so gradually that the progress was not noticeable.

We had formed the American Fish Culturists' Association and had sent the late George Shepard Page to Washington to induce Congress to make fishculture a national industry. The game worked, and in 1871 the United States Fish Commission was created, and Prof. Baird was made its head, without salary. All this is a matter of history, but the following is not. The Professor sent for Seth Green to begin shad-hatching on the Potomac, as he had done on the Connecticut and Hudson in previous years for the Fish Commissions of those States. Seth worked the river with his men for two years, but his egotism was so intense that he appeared before a congressional committee several times and exploited himself and ignored Prof. Baird, his employer, in a way that threatened the appropriations.

During these two years I was hatching shad for Seth at "Camp Green" on the Hudson and at Holyoke, Mass., under Prof. Milner, of the United States Fish Commission. Prof. Milner sent me down to see Prof. Baird at Washington, and I met a large man with a face that at first I thought to be sad, but afterward knew that it wasn't. He was a new kind of man to me in those days, for a quarter of a century ago I was rough and tough, fresh from the woods and the army, and a man like Baird, who was not self-assertive, didn't count.

He asked me questions, as though he knew nothing of fishculture, and at first I wondered that such a man had been placed at the head of American fishculture, but before the interview was finished it was evident that his questions were those of a man who knows most that is known in his day and wishes to find out all that others know.

It was this trait which enabled him to overcome the prejudices of the coast fishermen against scientific investigators at once, and he had their help from the start. They were anxious to find rare specimens for him in the hope of getting him something not described in his books, and of receiving the partly printed acknowledgment and thanks from the Smithsonian Institution.

A Glimpse of the Man.

Although I had worked for Prof. Baird and corresponded with him, I first met him in 1874; he was then a man of 51, having been born at Reading, Pa., in 1823. I sent my card in, and while waiting to be ushered into the presence of a great scientist, a large man came out and grasped my hand, saying: "Come in and sit down and tell me all about shad-hatching. I wanted some work done on the Potomac and other rivers, and Prof. Milner named you as the proper man. Mr. Milner is off on the Great Lakes now, and you'll have to take hold without his help and get ready, for the fishermen have sent shad here to me that they say would have spawned in about a week."

And this large, unassuming man, low-voiced and slow of speech, was the great zoologist who had been made United States Fish Commissioner, under a law which he had drafted that provided that the Commissioner should serve without salary. He was at that time Assistant Secretary of the Smithsonian Institution, to which place he was appointed in 1850 and which he held until the death of the secretary, Prof. Henry, in May, 1878, when he was made secretary, a position which he held until he died, at Wood's Holl, Mass., Aug. 19, 1887.

A few minutes in his presence banished all diffidence, and we talked fishculture and its future for a long time, and while talking to him and studying him there was a question which somehow dodged me every time I tried to ask it. I had handled men, but up to that day had never spent a dollar which was not my own, except on trips with young fish, when it was merely railroad fares and meals. The question insisted on being asked, and the reply was: "You will employ such men as you may need, establish spawning stations where in your opinion the work may best be carried on, and send in vouchers for all expenditures."

I withdrew after promising to report progress daily, and had gone half-way across the park when a messenger summoned me back, and there was Prof. Milner, returned from the Lakes.

"What have you done?" Mr. Milner asked.

"Nothing. I was about to telegraph to my trout ponds at Honeoye Falls, N. Y., for Charlie Bell to come and help me take shad eggs. I don't know of a spawn-taker here, but with Bell the work could be started in two places."

Mr. Milner thought a moment and then said: "The shad work was placed in my hands by Prof. Baird, and it was arranged that you should come to the Potomac. Other arrangements have been made, and you are to go to Germany with young shad, and the Potomac work will have to be looked after by some other man. Go back to the work on the Hudson when the shad begin to spawn there and be ready for the trip to Germany about the time that the shad begin to spawn in the Connecticut."

Prof. Baird, having put the whole shad work into Mr. Milner's hands, did not venture a word of criticism on the decree of Prof. Milner which annulled his order that brought me to the Potomac. He had assigned Milner in charge of the shad work, but in his absence had either overlooked that fact or had thought that Milner had overlooked it while he was on the Great Lakes. Then, like the great general that he was, Prof. Baird said no word of disagreement with Milner's plans, and I went north.

Before I left Washington Prof. Baird asked me to dine at his house, and after dinner he spoke of an enlarged field for fishculture, such as seemed almost visionary at the time, but which has been realized to-day, when the people and our law-makers were educated to the benefits to be derived from fishculture and the need of replenishing not only our brooks and rivers with shad, salmon and trout, but to carry the work to the Great Lakes and even to the ocean, in order to provide food for the people.

At this time fishculture was confined to shad, salmon and trout, and the public was somewhat sceptical of the success of their propagation. I left the Professor with broadened views of my work and of him. He had a quiet way of stating a fact that was convincing and required no argument to sustain it, and as his work in fishculture could not be suspected to be of personal benefit, it is fortunate for the cause and for the country that Spencer F. Baird was the first Fish Commissioner of the United States. To his broad mind alone is due the strides which were made in the propagation of fishes by our national Government during the sixteen years of his commissionership.

As One of the Ichthyophagi.

He was not a member of the once famous Ichthyophagous Club of New York, which did not confine itself strictly to the eating of fish, as its name implies.

"What kind of a name is that which you are giving us?" asked my kind visitor, who was looking over my notes.

"If you knew the least bit of Greek, which you don't, you would know that *Ichthyos* means fish and *phagos* to eat, therefore the club were fish-eaters. Now, let me tell this story in peace without educating you at the same time. Help yourself to the tobacco and books and don't break that corkscrew. Let's see; where was I?"

The club ate other things than fish. It had several sorts of sea-weed salads, fresh-water mussels, razor-clams, salt-water sand worms, hell-benders from the Alleghany River, and tell it not in Gath nor in the streets of Askelon, filet of beef, chops, game of many kinds, but only a single course at each dinner as the finale. And then—the beverages were not whale-oil, menhaden oil nor the inky fluids ejected by the squids. Nor were the after-dinner speeches on scientific lines. Therefore Professor Baird did not attend the annual meetings of the Ichthyophagous Club. Possibly Mr. Blackford gave him a hint that science was spelled with a small "s" at the Club, and fun with a big "F." This is merely conjecture, for Messrs. Blackford and Baird were friends of the warmest kind, and Prof. Baird was not in any sense a convivial man. The Ichthyophagous Club was convivial, yet had a mission, which was to overcome prejudice and utilize for food many fishes now rejected through no fault of their own.

Prejudice, like politics and religion, is inherited, and few men have the courtage to break its bonds. "My grandfather did not eat this fish, and it is not good." That satisfies most men, it does not satisfy the progressive mind which wishes to know why its grandfather discarded this fish; was the flavor not to his taste, or the form not pleasing to his eye?

Therefore when the Professor wished to push his culinary investigations at Noank, Conn., after my return from Germany, in 1874, in the direction of sturgeon, he could not find a person who knew how to cook it, or had ever eaten it. In some way he had learned that my boyhood home had been Albany, N. Y., where the sturgeon were so common in market as to be called "Albany beef," and he asked: "Did your people in Albany eat sturgeon?"

"Yes, often, we were fond of it, but the fish is not common there now, and is nearly extinct in the river, and from being a cheap food it has become an expensive one."

PHOTOGRAPHS OF LEAPING SALMON.

By Dr. Robt. T. Morris.

"Have you any idea how it was cooked?"

"They cut it into steaks and parboiled them to get rid of the strong oil, and then they treated it as they would treat a veal cutlet, and it makes a better cutlet than ever came out of a calf. Professor, if old Mary Cooney, who cooked for mother before I can remember, and kept on cooking for thirty years, was here she would serve up those sturgeon steaks so that they would wrap around your heart like a yard of new flannel."

Then I turned to a fisherman and asked: "How do you cook sturgeon here?"

The man gave me a withering look, or one that was intended to wither, and replied in a tone of disgust: "I was never poor enough to eat a sturgeon."

The Professor had sturgeon cooked after my prescription, and he also had at the time a big 10ft. shark, and had cutlets of that served in the same way. Many ladies were at the table, and the verdict was: "The yellow sturgeon is good, but the white sturgeon is not fit to eat." And they were unanimous in this opinion. Our friend Piseco was there at the time, but I can't recall that he ever gave an opinion on the merits of Prof. Baird's two "sturgeons," and I doubt if the Professor ever told the ladies what sort of a fish a "white sturgeon" was. He was intent on knowing if shark was eatable, and found out in the only way open to a man who is not hide-bound by prejudice. Some time before or after this he received the carcass of a panther from the Adirondacks, and I read of a dinner where he had the great cat served in different ways to his guests. Dr. Theodore Gill was there, and I think Dr. Coues partook of more or less of the beast, but one trial seemed satisfactory, and there has been no demand for panther meat in Washington from that day to this. I have lost the account of that feast, and wish that some one who was there would give us the menu in FOREST AND STREAM, with his personal views on the panther as an edible proposition.

As an Ornithologist.

Here is a story that gives a view of the Professor in his true character of an unassuming man who knows more than he looks to know. He was very plain in dress and but—here's the yarn. A Boston taxidermist whose name is unfortunately forgotten, as well as the names of the birds, said to me: "One day an old farmer-looking chap with a Derby hat on the back of his head, resting on his ears, came into my shop and looked around. He stopped in front of a bird and said: 'That's a fine specimen of ——, and exceedingly well mounted.'"

"'You are mistaken about that bird,' said I, 'that's the ——. I doubt if you ever saw one of the ——, they are very rare.' 'I know what I am talking about, for I've studied birds all my life,' and the old farmer nodded and went on looking over the collection with his hands behind his back, and I began to wonder if he would know the difference between a hummingbird and a crow, when he said: 'I sent you some specimens from the Smithsonian Institution a few days ago, I hope they came in good order.'

"Well, sir, my heart was in my throat when I asked: 'Is this Prof. Baird?' and he said it was. And there I had been, like a chump, disputing one of our first ornithologists. You could have carried me out on a chip. Then I asked him if the specimen first referred to was the very rare bird, and he said it was. He did not take offense at my manner, for he sent me specimens afterward, but I never was so taken down. He did not dispute my decision about the bird, nor offer to argue the point; he named the specimen and let it go at that. He is the most wonderful man I ever met."

As an Angler.

But as it was as a fishing companion that started me to write of the great scientist, I must touch on our only fishing trip, but in all my sketches I aim to picture the man and not to tell fishing stories, so I have tried to place this man in the light as I saw him.

The early October days at Wood's Holl, Mass., were giving warning that winter was on its way down the coast, and Prof. Baird had sent for me to talk about the culture of lobsters, cod and other winter fishes, and there came a bright, still day, when I remarked: "Professor, this is an ideal day for fishing, and Martha's Vineyard is an ideal place for sea fishing, and I have arranged for a supply of bait, and will ask you to let me off for half a day in order to get a bit of fishing, which does not often come my way."

"Have you engaged your boat?"

"No, they are plenty, the tide will be right from 9 to 12, and as there was no pressing work I thought it best to go, especially as you devote the most of that time to your stenographer, and would not need me."

In his quiet way he asked: "May I go along?" And then his steam launch was ordered, the stenographer took a rest, and with all the bait and tackle necessary we went out into "Quick's Hole"; for, by a curious sort of nomenclature, in Martha's Vineyard each bit of water between the islands is called a "hole." In these tideways there is a fierce current, as the Atlantic ebbs and flows, so that the angler must change his sinker to suit the flow, unless he is willing to use a heavy one at slack water and so lose the "fight" of his fish.

His line had scarcely reached bottom before the Professor had a bite and pulled up a tautog, the "blackfish" of New York and south, a fair-sized fish of about 2lbs., and he remarked: "It reminds me of boyhood days, when I used to fish in the Schuylkill River, and of the same feeling of the fish, giving jerks which are almost electrical. I can easily see how men like to fish, but since I became a student I have never found time to waste in that way."

"Fishing has never been a waste of time with me, it is a change of occupation, which is rest, and to business men a week or two spent in fishing braces them up and they return to work brighter and stronger. However, I make no such excuse in my own case, for my outdoor life is sufficient, and I fish because I like the sport."

"These toadfish," said the Professor as he dropped one in the boat, "seem to be most all mouth and digestive apparatus; they have powerful jaws and are very tenacious of life; do you know of any fishes which eat them?"

"Yes, I saw one taken from the stomach of a cod, and have been told by fishermen that dogfish eat the smaller ones."

"Ever eat one yourself?"

"Yes, tried them once for curiosity. They are better than your white sturgeon at Noank, but not as good as skate or sculpin, sea robin and some other fishes not usually eaten. I remember the toadfish as soft and mushy as we fried it, yet when skinned the flesh seemed firm."

"What do you think the mission of the toadfish may be?"

"Like that of sharks and scavengers; to keep down other forms; to absorb food, but to yield little in return."

"Doubtless," said he, "that is the mission of our birds of prey also, and of the dogs and cats." Here he evidently fell into a train of thought which lasted while I took in half a dozen fish, when he pulled in his line and said, half aloud: "They've taken off my bait." As I was aware that his bait had been off for half an hour, and that he had lost interest in the fishing, I said: "Now we've had fishing enough. I think we had best go back and be in time for dinner."

While there is nothing of particular interest in the foregoing conversation, it illustrates the trend of thought and the habit of asking questions which were characteristic of Prof. Baird. He was no doubt better informed on the questions which he asked me while we were fishing than I was, but he realized the fact that every man has had opportunities for observation, which came to him by some accidental capture or the opening of a fish, which might never occur to the student who set out to investigate along that line. He had a quiet way of finding out all a man knew on any zoological subject without making him feel that he was on the witness stand, and he was ever absorbing knowledge in this way.

Senator Edmunds, of Vermont, drew the bill creating the office of Fish Commissioner, and with Prof. Baird in view he provided that no salary was to go with the office in order to place it beyond the reach of party politics. The commissioner was not subordinate to any of the executive departments of the Government, its reports were to be made directly to Congress, and his work was not even nominally under the direction of the President or of any cabinet officer. This was great power to give a commissioner, but Senator Edmunds was wise in doing it, for he realized that in that day fishculture was an established fact, and should be undertaken by the Government, but that any hampering of the commissioner by men who had to be educated to the needs of the work would be fatal to it, and so this bill went through.

While fishculture was contemplated, and has since become the main object of the commission, it was not mentioned in the original bill which passed Congress under joint resolution on Feb. 9, 1871, authorizing the appointment of a Commissioner of Fish and Fisheries, whose duties were: "To prosecute investigations on the subject of the diminution of valuable fishes with the view of ascertaining whether any and what diminution in the coast

and lakes of the United States has taken place; and if so, to what causes the same is due," etc. But while the commissioner was to report "What protection, prohibitory or precautionary measures should be adopted, * * * the bill did not name fishculture, and the first two reports of the commissioner only touch on the subject lightly at their close, yet the good work which some of the Eastern States had begun a few years before was uppermost in the mind of the new commissioner, and after the exhaustive investigations in the salt and fresh-water fisheries which fill the first bulky reports, he entered upon the work of fishculture in a small way, and showed its benefits to Congress year by year, until he put national fishculture on a solid footing.

In his early life he formed a friendship with Audubon and later worked with the elder Agassiz, and throughout his life was both a student and a teacher. His sense of humor was not keen, but he seldom showed that he had the sense, but I have told him stories intended to be funny, at which he would quietly laugh, forget, and months afterward ask: "What was that thing you told me when you were here last?" Of course, I had forgotten, but I would tell him another, and he never knew the difference.

I was in charge of a hatchery when the news came that Prof. Baird had died at Wood's Holl, and the flag was at half-mast until after the interment, for if I ever looked up to a man as a true and loving friend, that man was Spencer Fullerton Baird. FRED MATHER.

Fishing on the North Platte.

I LEFT Medicine Bow Aug. 15, 1898, with my wife and two children, to try the rainbow trout in the southern part of Wyoming. The first day's drive brought us to Rattlesnake Creek, at the foot of Elk Mountain, where we made camp at 6 o'clock. My wife inquired if there were really any snakes there, and I told her there were not, that they had departed with the Indians. Just then I went to picket the horses, and had got only a few steps from camp when zi-zi-z-i-i-i-p, there was a rattlesnake 4ft. long and very lively. A club soon settled him. After supper my wife and daughter were easily persuaded to sleep in the wagon, while my son and I made a good couch on some willow brush.

At noon next day we arrived at the town of Saratoga, a pretty little village on the banks of the Platte. It was twenty-two years since I had been in this valley, and the change that has taken place is wonderful. One little hunter's cabin then represented what is now a thriving town, surrounded by beautiful farms and stock ranches. The hot mineral springs are very efficacious in rheumatic and many other complaints; there are two good brick hotels and a sanitarium. The hotels did not trouble me, and my camp was soon made beneath a large cottonwood tree, and then I sat me down to ruminate.

This used to be one of my favorite hunting grounds. Often I have met the noble red man here on the hunt, and many a peaceful chat have we had together on the banks of this beautiful river. The last time I was here, in 1876, some beaver were trying to build a dam across the river, and I am sorry to say I caught some of them, but now they are gone, and so are the Indian, the antelope, the deer and the elk. Where I used to ride so free twenty-two years ago, there are now wire and pole fences, and wheat, oat, barley and alfalfa fields. A few of my old friends and companions of bygone days have settled here, but many of them have gone over the range to that undiscovered country from whose bourne no traveler returns.

Another great change has taken place. In 1876 no trout had ever been known to exist in the North Platte and its tributaries, but now, thanks to our fish commission, these waters are said to be alive both with Eastern brook and rainbow trout, and stories have come to my ears of 12lb. rainbows and 5lb. brook trout, and now I shall set up my rod and learn if these are fish stories; we will hope not. I walked down the bank about a quarter of a mile to a place where there is a nice riffle and a deep pool below, and here I make my first cast, and had a rise the first cast, but did not hook my fish. I make another cast, and the next moment had hooked him, but in a moment the water just boiled about my fish, and I had glimpses of two big ones, and was glad there were only two flies on that leader. I was powerless to handle them; all I could do was keep the line taut and let them fight it out. This they soon did, and I was short a leader and two flies. There were plenty more in my tackle pocket, and in a few minutes I was ready again; this time with only one fly, a royal coachman on a No. 4 hook. Wading down the stream to the next riffle, and I hooked a brook trout weighing about 1lb., and then in the still water I got a rainbow of 3½lbs., and then a rainbow of 1½lbs. This was plenty for this evening, so I went back to camp, and to the sanitarium for a bath.

The next day we moved up the river to the mouth of Brush Creek, and remained there three days. Here commenced the best fishing I have ever seen. The fish are nearly all rainbows, and of twenty-nine caught here the smallest weighed 2½lbs. and the heaviest 6½. They averaged 4½lbs. And here I want to say a word in favor of the rainbow trout. Of all the fish I have ever caught they are the chief for fighting and eating qualities, and I am not an amateur with the rod. I have fished from the Great Lakes to the Pacific in all the States and Territories. I have caught 30lb. maskalonge and 40lb. lake trout. I saw in FOREST AND STREAM last spring an article that was far from complimentary to the rainbow trout, and my blood boiled in a moment. But after studying the matter, I conclude it must be the fault of the streams in which they were found. Here we have an elevation of 7,000ft., and the streams are fed from the snow all summer, and the water is clear and cold all the year round.

After our curiosity and appetites were satisfied here, we moved up to French Creek, ten miles. Here we had some grand scenery. This is the lower end of a deep cañon, eighteen miles long, where the river tears along between walls from 50 to 1,000ft. high, and here beautiful French Creek empties its pure waters into the Platte. Just imagine a stream 20ft. wide, averaging 18in. deep, flowing over pure white quartzite boulders, and literally swarming with brook trout. Here I gave my son, fifteen years old, his first lesson in fly-fishing. He had never taken much interest in it before, but now he is counting the days to see how soon we shall return to this happy land. I don't know but he dreams about it. I know his father does. I was disappointed at first in my effort to learn if there were any big trout in the river. In vain the coachman touched the water, there were no signs of trout here, and I began to think that the big fish are all below; but when I crossed to the west side, where there was a ledge I could climb, and looked down in a pool, and, great ghost of Izaak Walton, I saw plenty of fish. In the words of my old friend, P. G. Murphy, "there were two tons of trouts in this pool, and they are whales." I climbed down again to consider. I put on a grizzly king on No. 4 hook and tried it, but they would not rise. Then I let it settle and drift down, when suddenly, "bump," and oh, how the reel began to sing. Nearly all of my 100yds. of No. 3 line ran out before I could turn my fish, but at last it was done, and he broke the water with a jump of at least 4ft. clear, and he a yard long. In twenty minutes he was in the net, and I went ashore to weigh him, and 8¾lbs. was the mark he touched. My wife said: "You have got enough for one day," but I was not quite satisfied and tried again, but I could get no more of that size, and finally stopped with five more that weighed from 4 to 6lbs. each. I would have liked to camp here for the next six weeks, but had agreed to meet some friends at the upper end of the cañon on the 23d of the month, and so had to pull camp next day. Of all the camps in my thirty years in the Rocky Mountains, this is the best.

During this day's drive we saw some very fine scenery. Our road lay through a beautiful valley between the Medicine Bow and Independence mountains. The river cuts through the mountains six miles east of this valley. At the crossing of Big Creek we saw one of the great stock ranches of the Hunter Bros., and a meadow six miles long and four miles wide, and twenty-three mowing machines were cutting hay. Twenty years ago this was a sage plain, and the home of hundreds of antelope and jack rabbits, but the great ditches and the sage grubber have made the usual change—where will it stop? At 4 in the afternoon we reach our camp, but the friends we expected were not there, so we went fishing, but with poor luck. There are signs of many camps here, and it looks as though it had been pretty well fished out, and from the dead suckers and little trout there is every evidence that dynamite has been used.

In the morning my friends, Jackson and Kelley, arrive, and two larger hearted or more enthusiastic fly-casters never lived. We spent two days fishing up and down and just got enough to eat; then we hitched up and drove down the river six miles, and made camp 1,500ft. above the river at a little spring. The trout were here, and we filled our bags in the afternoon, and climbed up that steep hill to camp. We earned all we got this day. We spent the next day here too, and made good catches, but got no fish over 4lbs.

I had told the boys of the big trout and fine fishing below, and have shown them some of the fish, and they were anxious to go down, but the time was too short, so we pulled back to the camp ground, six miles above there, and the next day started on the home trail.

On our way we passed through the lower end of the great North Park in Colorado, and we stopped for noon at the soda springs and drank soda water till we felt that we should want no more for a year. We camped at night on the Laramie River, and tried night fishing with white millers, and it is pretty good sport. At 10 o'clock we went to camp satisfied and turned in. Next morning we found ice a quarter of an inch thick on our water buckets, but the sun soon put the frost to flight, and about 9 we went fishing. Here I should like to stop, but must tell the truth, as all fishermen do. My son beat me; he caught more and larger trout than I, and only a week before I had given him his first lesson in this art. I was ready to go home, in fact I wanted to go, but doubted if I could get the boy away from the stream till the last moment. I did not want to fish, and would not fish, so I remained in camp and wrote up the journal. This brings me to the end of one of the pleasant experiences of my life: 250 miles by wagon through grand scenery, with sport enough to last a year. RAINBOW.

The Kennel.

Fixtures.

BENCH SHOWS.

Jan. 16.—Bakersfield, Cal.—Field trials of the Pacific Coast Field Trials Club. J. Kilgarif, Sec'y.
Jan. 18.—Logansport, Ind.—North Central Indiana Poultry Association's bench show. Sol. D. Brandt, Sec'y.
Jan. 19-21.—New Orleans, La.—New Orleans Fox Terrier Club's show. Wm. Le Monnier, Sec'y.
Jan. 23.—West Point, Miss.—Champion Field Trials Association's fourth annual trials.
Feb. 21-24.—New York.—Westminster Kennel Club's twenty-third annual show. Jas. Mortimer, Sec'y and Supt.
March 7-10.—Grand Rapids, Mich.—Butterfly Association's bench show. Miss Grace H. Griswold, Sec'y.

FIELD TRIALS.

1899.

Jan. 16.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y.
Feb. 6.—Madison, Ala.—Alabama Field Trial Club's third annual trials. T. H. Spencer, Sec'y.

A. K. C. Meeting.

THE regular quarterly meeting of the American Kennel Club was held at the club's offices, 55 Liberty street, on Dec. 8, Vice-President Edw. Brooks presiding. The following clubs were represented: American Dachshund Club, American Pet Dog Club, American Scottish Terrier Club, American Spaniel Club, Brunswick Fur Club, Collie Club of America, Gordon Setter Club of America, Irish Terrier Club of America, Mascoutah Kennel Club, Metropolitan Kennel Club, Milwaukee Kennel and Pet Stock Association, National Beagle Club, New England Kennel Club, Pointer Club of America, San Francisco Kennel Club, and associate members A. Clinton Wilmerding, H. K. Bloodgood and G. W. H. Ritchie.

The applications of the New Orleans Fox Terrier Club and the Joliet Kennel Club for membership were approved. The committee on membership also approved of the credentials of Mr. A. P. Bagley, filed by the St. Bernard Club of California, and Mr. E. M. Oldham, filed by the St. Bernard Club of America. Mr. Oldham declined to act, saying that he had neither the time nor inclination to serve. Mr. Bagley was elected. The following gentlemen were appointed to constitute a special committee to represent the A. K. C. on the Pacific Coast: John E. de Ruyter, chairman; N. H. Carlton, W. R. Cluness, Jr., J. P. Norman, C. M. Grey, M. C. Allan and C. A. Haight.

The treasurer's report showed a balance on hand of $4,527.93.

The stud book committee reported ten applications received for kennel names, and recommended that they be allowed.

Reports were also made of minor business, such as claims of fictitious pedigrees, etc. The Pacific committee's report was then read by the secretary. The meeting was held at the Occidental Hotel, San Francisco, on Nov. 10. It requested authority to grant dates for holding shows and to receive and hold, temporarily (subject to the order of the A. K. C.), all funds that may come into the possession of said committee, in the discharge of its official functions; to decide protests from rulings of bench show committees, etc.; to initiate proceedings or to entertain complaints against any person or club in the matter of fraud, and to inflict such penalty as would be within the province of the A. K. C.

The resignations of the Poodle Club of America and of the New England Field Trial Club were accepted. The question of calling on the clubs joining the Pacific Kennel League to show cause why they should not be dropped from A. K. C. membership was referred to the Pacific special committee.

The matter of the New England Kennel Club's show was then taken up. The show was held at Braintree, Mass., on Oct. 14. On Sept. 8 the New England Kennel Club issued its premium list. The classification was correct in every respect. On Sept. 22, the A. K. C. amended its rules, after having given a month's notice in the Gazette, that winners' classes, after having been published in the premium list, could not be changed. Twenty-two days later the show of the N. E. K. C. was held, and in ten classes they changed the winners' classes from those advertised in the premium list, and divided them by sex, which was clearly a violation of the then existing rules of the A. K. C. After some discussion, the secretary was instructed to cancel all illegal classes and wins. It was decided to continue the publication of the Gazette under its present arrangement for another year.

A New Hampshire Fox Hunt.

Owgh-oo-oo! owgh-oo-oo! owgh-oo-oo! rung out the voice of old Sport. Owgh-oo-oo! owgh-oo-oo! owgh-oo-oo!

The fox had been hunting for his supper, or early breakfast, through the pastures during the night, and now Sport was trying to unsnarl the tangle of his tracks.

I had left New York in its snowdrifts, after the great November storm, and gone up through the beautiful Connecticut Valley into the heart of the western New Hampshire hills. John and I had had breakfast and a four-mile sleigh ride before sunrise. The horse had been cared for at a farm high up on the hill, and now we were making our way up through the pastures toward the top of the mountain, but scarcely 100yds. had been crossed when the hillside rung with the owgh-oo-oo! owgh-oo-oo! owgh-oo-oo! of the hound, and a few minutes later a short, snappy owgh! owgh! owgh! owgh! owgh! owgh! told us the fox was up and away toward the top of the ridge.

"I'd give five dollars to be on the mountain now," said John, but neither five nor fifty would have purchased that privilege. More than a mile of snowdrifts lay between us and that goal, and much of the time we were in them to the hips, as we went wallowing and plunging along.

Off came overcoats, then shooting jackets, then gloves, although the temperature was below freezing, and the wind blowing half a gale, and at last with sweat running down our faces and the writer nearly "winded," we reached the gap between the old mountain and the ridges to the west.

From away beyond the ridges came the voice of Sport: Owgh! owgh! owgh! owgh! owgh! owgh! owgh! roaring down the wind, now louder, now almost lost behind the southwestern hills, then again increasing to a roar as he came over a hilltop, and dying down as he went into the woods or down into a valley.

"Sh! sh! drop down behind the wall," whispered John. "There is a 'stray,'" and he pointed up the ridge. Coming down toward us on the great fence poles above the cross-wall was a big, red, white-whiskered fox. What a great fellow he was, and how big his head looked as he came, directly facing us, down the hill, stepping lightly and carefully along the pole, leaving the least possible scent for a pursuing hound. Old Sport was not on his track, and he knew it, but he was taking all possible precautions. Now he jumps from the wall to a rock, touching lightly on his toes, thence to a ledge, never touching the telltale snow. Now he steps or springs lightly and slowly from ledge to ledge. Now he stops and turns. He knows the hound is more than a mile away, and he is no hurry. "He is going to lie down," whispered John. No, the place does not quite suit him, and he goes lightly and carefully up to the top of the ridge and down the side of a spur, making to the south to a small spruce, behind which an almost perpendicular ledge rises 30yds. or more, and there he curls himself up under the evergreen branches, lifting his head from time to time and listening to the hound.

If you think fox shooting unsportsmanlike, go and try it among the mountains of New Hampshire in December, when they are in their prime, and the young foxes have got their "eye teeth cut," and the old ones are "fat and sassy." Match your craft against their cunning and you will be very likely to change your opinion.

"There comes another one, John."

Down the ledge on the first one's track comes a very handsome and very red fox. He stops on a nearby rock. The old red raises his head. They look at each other and apparently the newcomer's impressions are not favorable for closer acquaintance, for he jumps off the rock and trots leisurely down across the pasture.

John creeps up, under cover of the wall and spruces, to cut him off, but he slips by behind the rocks and trees, not showing himself within gunshot, and goes on to the

mountain. John comes back, and is telling how neatly he escaped, when—"There is another one, John, and he is almost black."

"A silver-gray," excitedly whispers John.

"No, just a little red shows on his back."

"He is the blackest fox I ever saw running wild," says John.

Down the ledge comes the black. He looks at the old red under the spruce. Then he jumps on him, and they roll and tumble over and over each other in the snow like puppies playing. Then the black gets up and goes off down the hill, and the old red goes back to his spruce.

Owgh! owgh! owgh! The hound is coming nearer The fox gets up and jumps up on a big boulder near the point of the hill and listens, then goes back and lies down.

Owgh! owgh! owgh! Louder and louder comes the sound. Again the old red jumps on the boulder and listens. This time he finds the hound is coming sure, and he climbs quickly up the ledges and disappears over the ridge.

Sport is coming, but his voice does not have the certain sound that it did. His fox has been playing over the bare ledges in the sharp wind and sifting snow, and the old dog is bothered to find the cold scent, so John calls him and puts him on the fresh track going on to the mountain. Then there is a furious run to the eastward. We climb quickly to the mountain top and stand in the biting wind on the highest summit for miles around. A magnificent panorama is spread out around us. The Minks, Kearsarge, Sunapee, Lovell, Monadnock and a hundred other peaks shining in their winter white, with the steel-blue ice of Lake Massassecum in sharp contrast almost beneath our feet. Another "stray" is watched coming across the pastures. Then Sport is heard bringing his fox back from the east. The sharp crack of John's gun rings over the mountain. The handsome red skin is soon off, and we make our way down the mountain after such a day's sport as is rare indeed even in the memory of old fox hunters, and of which the mere killing is but a very small part.

D. R. MARSHALL.

New York Bench Show.

THE judges for the twenty-third annual show of the Westminster Kennel Club, to be held in Madison Square Garden, Feb. 21-24, are as follows:

Miss A. H. Whitney, Lancaster, Mass., St. Bernards and Newfoundlands.

John Davidson, Monroe, Mich., bloodhounds, deerhounds, greyhounds, foxhounds, pointers and all setters.

R. F. Mayhew, New York, mastiffs, collies, old English sheepdogs, bull terriers, Airedale terriers and fox terriers.

J. Blackburn Miller, Newburgh, N. Y., Great Danes.

Edward L. Kraus, Slatington, Pa., Russian wolfhounds.

H. K. Bloodgood, New Marlboro, Mass., all spaniels (except toys).

John H. Matthews, New York, bull dogs.

John R. Buchan, New York, French bull dogs.

Frederick G. Davis, Boston, Mass., Boston terriers.

George B. Post, Jr., New York, beagles.

G. Muss-Arnolt, Tuckahoe, N. Y., Dachshunde and Basset hounds.

O. W. Donner, Milton, Mass., Irish terriers.

Dr. M. H. Cryer, Philadelphia, Pa., Dalmatians, poodles, all terriers (except bull terriers, Airedale terriers, fox terriers and Irish terriers), pugs, toy spaniels, Schipperkes, Pomeranians, Italian greyhounds, whippets and miscellaneous.

Points and Flushes.

The calendar of Spratts Patent Limited, 239 East Fifty-sixth street, New York, issued for 1899, is elaborately illustrated with portraits of typical dogs of different breeds, with descriptions of their race characteristics, elaborate sage advice on breeding, feeding, doctoring, training, etc. Poultry and cats also receive attention. The edition of this calendar being limited, extra copies will be sent only on receipt of 7 cents per copy. The San Francisco Branch is at 1320 Valentia street, San Francisco.

Canoeing.

Canvas Canoes on Florida Waters.

VISITORS to Florida who are fond of an outing, if they intend to winter near water, should provide themselves with Parker B. Field's small book, "Canvas Canoes; How to Build Them," published by FOREST AND STREAM, and with it to assist them construct for themselves craft to explore the rivers and numerous lakes. Our canvas fleet, built four years ago, with the aid of this book, on lines that differed slightly from the original plan to insure stability when fishing, is still in fair condition. We have used our boats during that time on the lakes around Auburndale, on the Gulf the St. John's, near the Atlantic Coast on the Halifax, and even went through the surf on the coast several times without accident. They were afloat nearly every day, and were hauled ashore after each trip. At some places, too, the beaches were rough with litter; at others with sharp shells. Such an experience was a fair test of canvas boats.

We had no end of pleasure in our canoes. Auburndale, in Polk county, Fla., lies in a nest of lakes, varying in size from large ponds to small seas, each of them as round as a watch, and the water in them is as clear as crystal, as sweet as drink from the "moss-covered bucket," a dream of plenty to thirsty fishermen. These lake chains are only grand systems of filters, some of them connected by small runs, others separated by sandhills. Their intricate arrangement is known to a few surveyors and to birds. They are so blue that they contrast sharply with the sandy shores and the brilliant pine forest around them. One resident told me that there were seventy lakes within a radius of five miles. He had not counted all of them either, for I found a number afterward that he did not know about. The one on the north side of town, two miles in diameter, was the gem of the collection.

This lake was our playground, our front yard almost, where we spent much of our time canoeing. Our small decked-over craft were 13ft. long, 3ft. wide, and low in the water. The new canvas when freshly oiled was yellow. The remarks of a native the first time he saw us out were, "Durn me ef they hain't a-rowing on a board, that 'ere are sure dangerous"; sentiments that were repeated afterward by one of his numerous children every time we passed their pier; and when we rigged our boats with small sails the young of this family were so sure they knew us that they stood off and addressed us in loud tones if we met on land, as though shrieks and yells were the only sounds likely to penetrate our brains.

The mother of this brood did washing ashore under a large oak, with moss-hung limbs, while children fought on the landing and fell overboard for amusement. There never was such a happy family. Calm days buster's yell and baby's shriek crossed the lake and came back unimpaired. And I had to go up there often to catch bait, as it was a famous place for minnows. To the extreme left of our landing there was a small outlet run that led under a bridge and through a jungle of scrub growth and moss to another lake. Further around the shore, built out from the pine woods, was a pier, where an acquaintance played a cornet at times to bring us luck while fishing. Directly opposite our pier there was a run from another lake, and to the right over the way a high pine hill, where girls came out afternoons to yodel and sing songs, asking whether we loved them as they loved us and such questions, while we cut bait, fished for fish, and said nothing.

Volition was almost sufficient to move our boats when the lake was smooth; the breeze smacked them through waves when whitecaps were running. Bass, brim and speckled perch were caught in numbers that raised a cry against fish. Ducks were hunted at the "flies" till all the leaves near such places were pierced by shot rain. There were sailing races on windy days, when spurned waves flung spray over us. Then there were other afternoons that I lay on my back in the bottom of my canoe, with feet scattered around deck, and allowed the breeze to drift me at random till I could not decide whether the butcher birds and mockingbirds singing on shore were port, starboard or overhead; whether the sun was setting off my left ear or painting a glow against my shoe soles—and I did not care. Once I awoke near shore after dark to learn geography by searching the bank; then marked time with paddles to find home and ascertain whether it was this evening or to-morrow morning.

Cruising parties were formed occasionally to explore the margin of our own lake, or go through runs to adjoining lakes. All Florida scenery near water is draped with moss yards long. Some of the large trees that stood in exposed places were noticeable on windy days; with scalps and whiskers lashing the air, with woolly garbs greatly agitated, they squirmed and capered till timid folks were disposed to shun them. Those miles of whirling, unkempt shores would have made a barber shout. And those evenings when the glow in the west made the lake seem enchanted were memorable. Sometimes a bright moon sparkled the way home; sometimes the sky was shot with myriads of brilliant stars. Black nights the lake sang a coronach like that of sorry multitudes. All of this was delightful. Our debt to the author of "Canvas Canoes" is a large one.

H. R. STEIGER.

A Novel Canoe Tent.

A CANOE tent of entirely new form has lately been invented by Thos. G. Winter, being a combination of canvas canoe and shore tent. The frame of the canoe is made of a system of light strips and ribs of simple construction; light in weight and easily transported. The canvas cover is so shaped as to make a perfect A tent when set up on shore, but it may be fitted over the frame, drawn tightly by means of straps, and converted into a watertight skin for the canoe. The combination is now being made by D. H. Heckman, the canoe and yacht builder of Kennebunkport, Me.

Atlantic Division Officers.

THE prolonged absence of Vice-Com. F. C. Moore and Purser J. C. Mowbray, of the Atlantic Division, made it necessary to elect new officers, and a special meeting was held on Dec. 3. The following officers were elected: Vice-Com., H. C. Allen, Park Island C. A., Trenton; Rear Com., N. S. Hyatt, Shattemuc C. C., Sing Sing; Purser, Arthur H. Wood, Park Island C. A. The Executive Committee members are Thos. Hale, Jr., and W. C. Lawrence.

CANOEING NEWS NOTES.

The annual meeting of the Rochester C. C. was held on Dec. 12, the following officers being elected: Capt., C. F. Wolters; Mate, L. P. Newton; Purser, Al. T. Brown; Chairman Regatta Committee, E. R. Buller; Chairman Commissary Committee, C. B. Wolters; Chairman House Committee, J. Clifton Baker; Chairman Entertainment Committee, J. R. Davy; Fleet Surgeon, Dr. Frederick R. Smith. The club has at present an active membership of fifty-three, with six non-resident members. The limit on the active membership is sixty.

Yachting.

THE Y. R. A. of Massachusetts is now engaged in a very thorough revision and extension of its rules, to embrace additional restrictions on cabin details, a limit to ballast and sail, and a table of scantling. We hope soon to publish the rules in complete form.

The Capabilities of Small Yachts.

CLINTON, Dec. 12.—*Editor Forest and Stream:* As the seagoing capabilities of small cruisers are being discussed, I send the following extract from a letter in the Yachtsman of Nov. 10, written by Mr. H. Warrington Smith, of the R. T. Y. C.:

"We hear square or transom sterns heartily abused—and not without reason—on all sides. Yet most of the hookers and crabbers round the Land's End and Lizard—mere open boats of 20ft. or so—are almost entirely square-sterned and straight stemed; these boats are accustomed to make their haven in every weather in every month throughout the year in one of the most riotous seas about our coasts, and are very rarely lost.

"By way of direct contrast, take the long-bowed, sharp-sterned Norwegian pilot-boats; and here you have another type of craft which, of all others, is renowned for seaworthiness.

"And then, while some swear by the Scotch lugger or the West Coast pilot boat, another who has been off the coast of Nova Scotia will tell you that the one ship for him is the bluff-bowed schooner of those seas, with her long masts and infinite main boom.

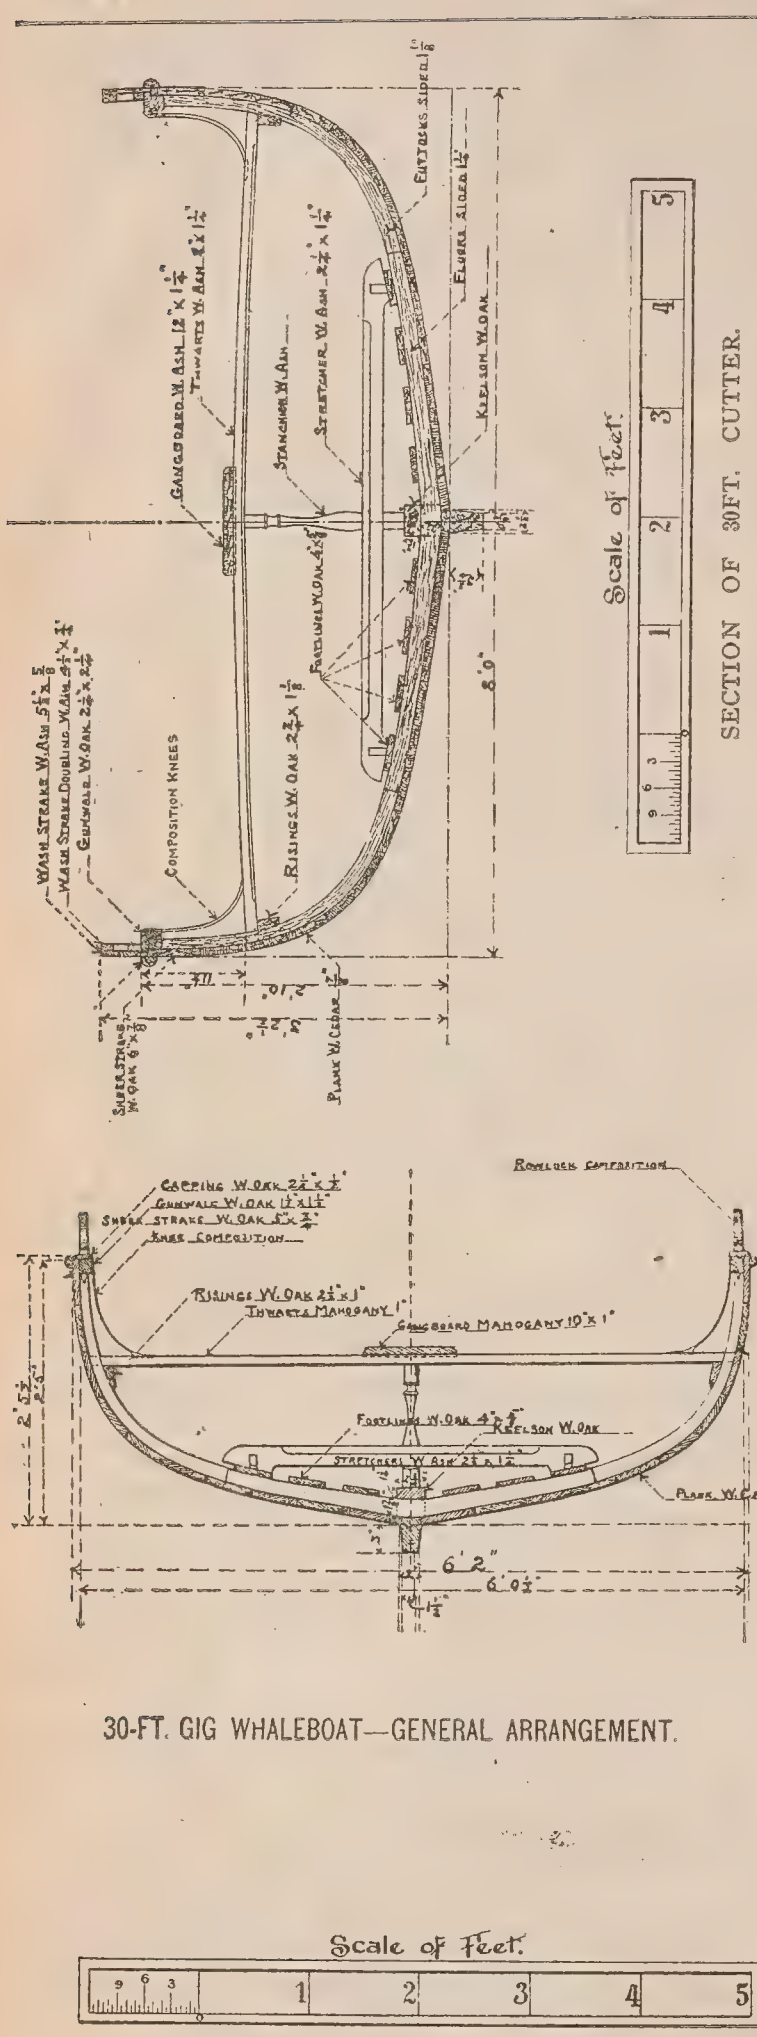
"The Bombay boat, the Malay proa, and the Chinese junk are again instances of distinct types of craft which, when handled by those who understand them, are able to face and live through the wildest weather; although, owing largely to the Eastern carelessness as regards gear and so forth, a far larger percentage of them is probably lost than with any European type.

"Do not these considerations suggest that, given a fairly sound structure in the shape of a boat, good material in gear, a certain amount of luck, and the man, or men, who understand the game, if really heavy weather has to be faced, the chances are the concern will come out all right at the end, and that those on board will thereafter diligently swear by that type against all others?

"But I must go on to add that I agree entirely with Mr. E. F. Knight, and many others, in the opinion that small vessels may easily (and especially in the neighborhood of the land) meet with weather too heavy for them—generally in the shape of one or two big seas—if that essential factor we call luck be absent. I think that many seas in the act of breaking may absolutely overwhelm anything in boat form, and that the Dogger-Bank in winter gales may be quoted in support of this notion."

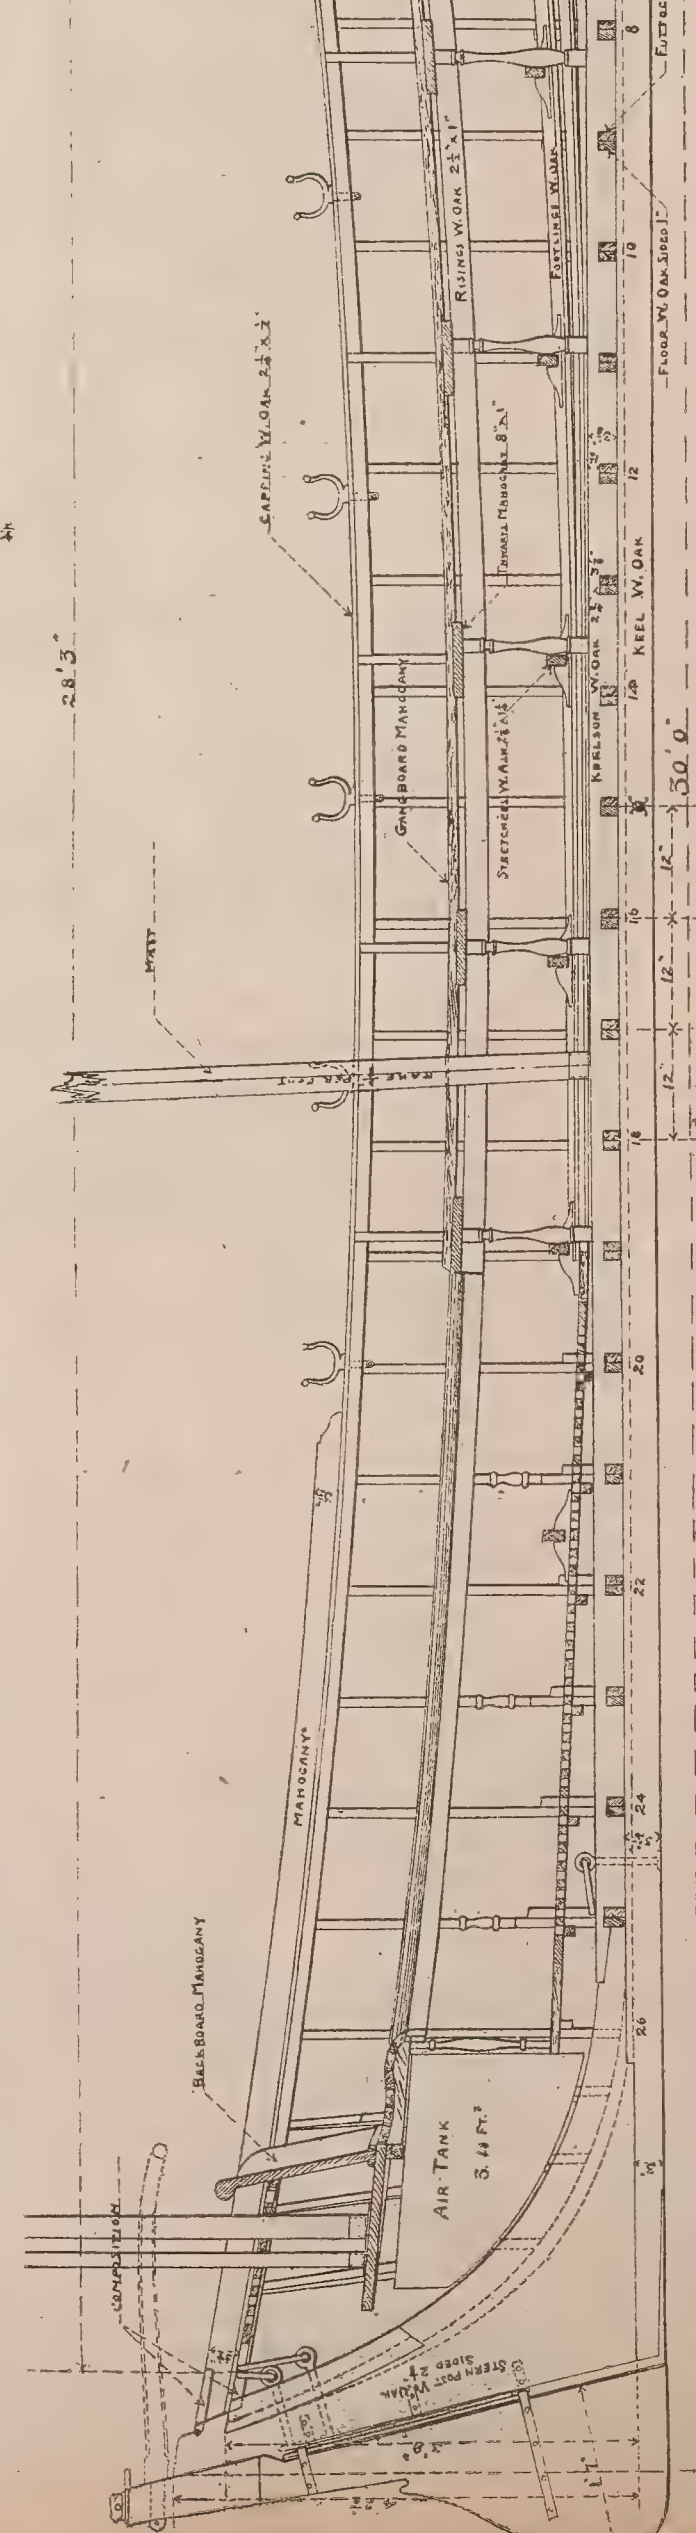
I altogether agree with the opinions offered by Mr. Smith, and would emphasize the point that seamanship is at least of equal importance with the question of design. This point has to my mind been overlooked in the correspondence, both in the Field and Yachtsman. Of course, in discussing the behavior of various craft under adverse conditions, seamanship must be taken as a fixed factor and a fair average assumed, disregarding alike the incompetent lubber and the skilled professional. Experienced cruising men understand this, but a novice might easily be led astray by the testimony of a well-salted veteran to the effect that a yacht of a certain size and type will take care of herself in any weather. All that the best ship can do is to give her crew a fair chance to take care of her.

A novice usually asks "Is such a boat safe?" or "Is she safe in any weather?" assuming that safety is a definite factor of the yacht's equipment, whereas safety is altogether a condition and a very variable one at that. It may be reasonably defined as the maintaining of a favorable balance of power among the various forces that constantly seek to compel the boat to sink or swim, capsize or stand up, work to windward or drift to leeward. Under fair conditions the chances may be so largely in favor of safety that danger is not supposed to be present. Under adverse conditions the ratio of chances may be reversed, and it is then the part of seamanship to utilize the few favorable elements to the best advantage in order to avert disaster.

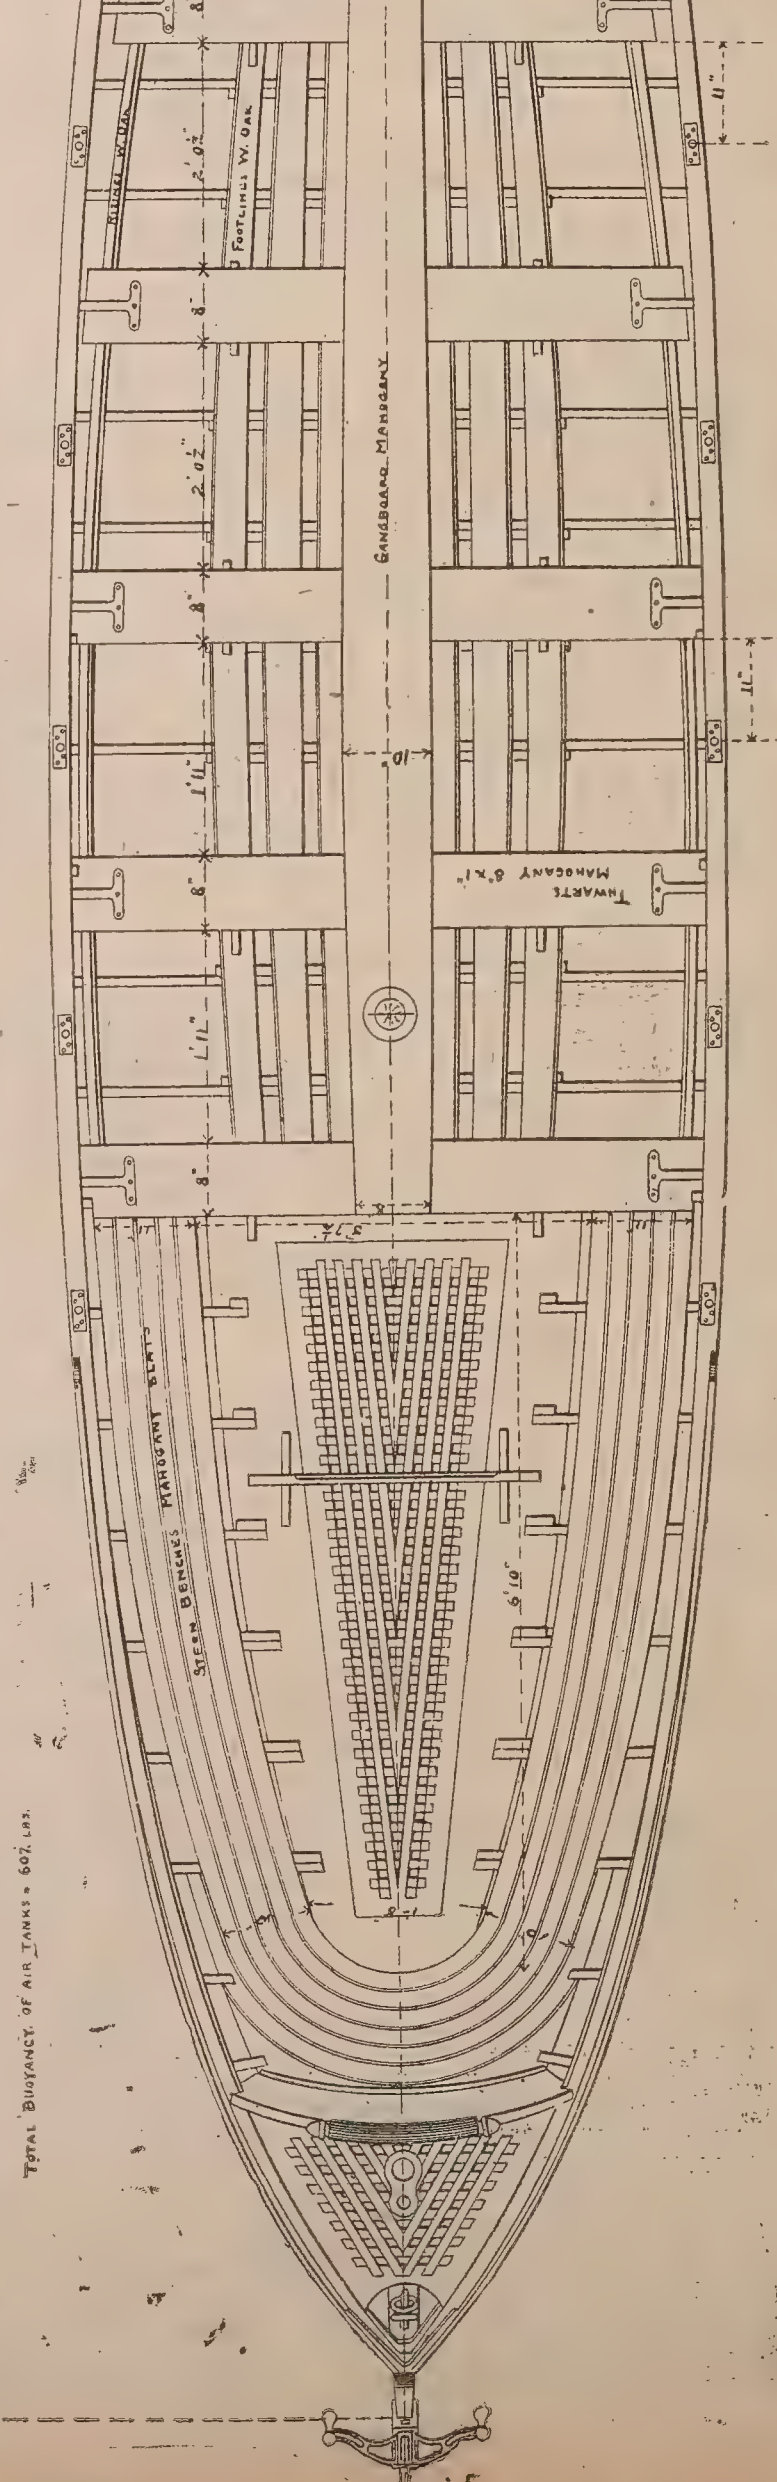


I do not wish to raise a fog of theory over a point that is essentially practical, but the cruising man who trusts altogether to a design for safety will miss the mark as certainly as the racing man who trusts altogether to a design for speed. All that either can obtain is a fair chance to realize the desired end by means of good seamanship. In cruising especially the limits are set by the man rather than by the boat. As an illustration, I would suggest Kunhardt's "Cruise of the Coot," published some years ago in the FOREST AND STREAM. I trust that some day this will be issued in book form. As an example of what can be accomplished under adverse circumstances even with an indifferent boat, it is worthy of the attention of every cruising man, while as a story it is far superior to the average "ham and eggs" cruise that gets into print in the various current yachting magazines.

In conclusion I want to compliment Mr. Wicksteed on the design of Zulu, published in this week's issue. For some time I have been hoping that a man conversant with local conditions would turn out a fast knockabout especially suited to the lower lakes, where in the summer light winds are varied with fierce squalls and choppy seas. In Zulu admirable provision has been made for these somewhat exacting conditions, and I should like to see a whole tribe of such yachts afloat.



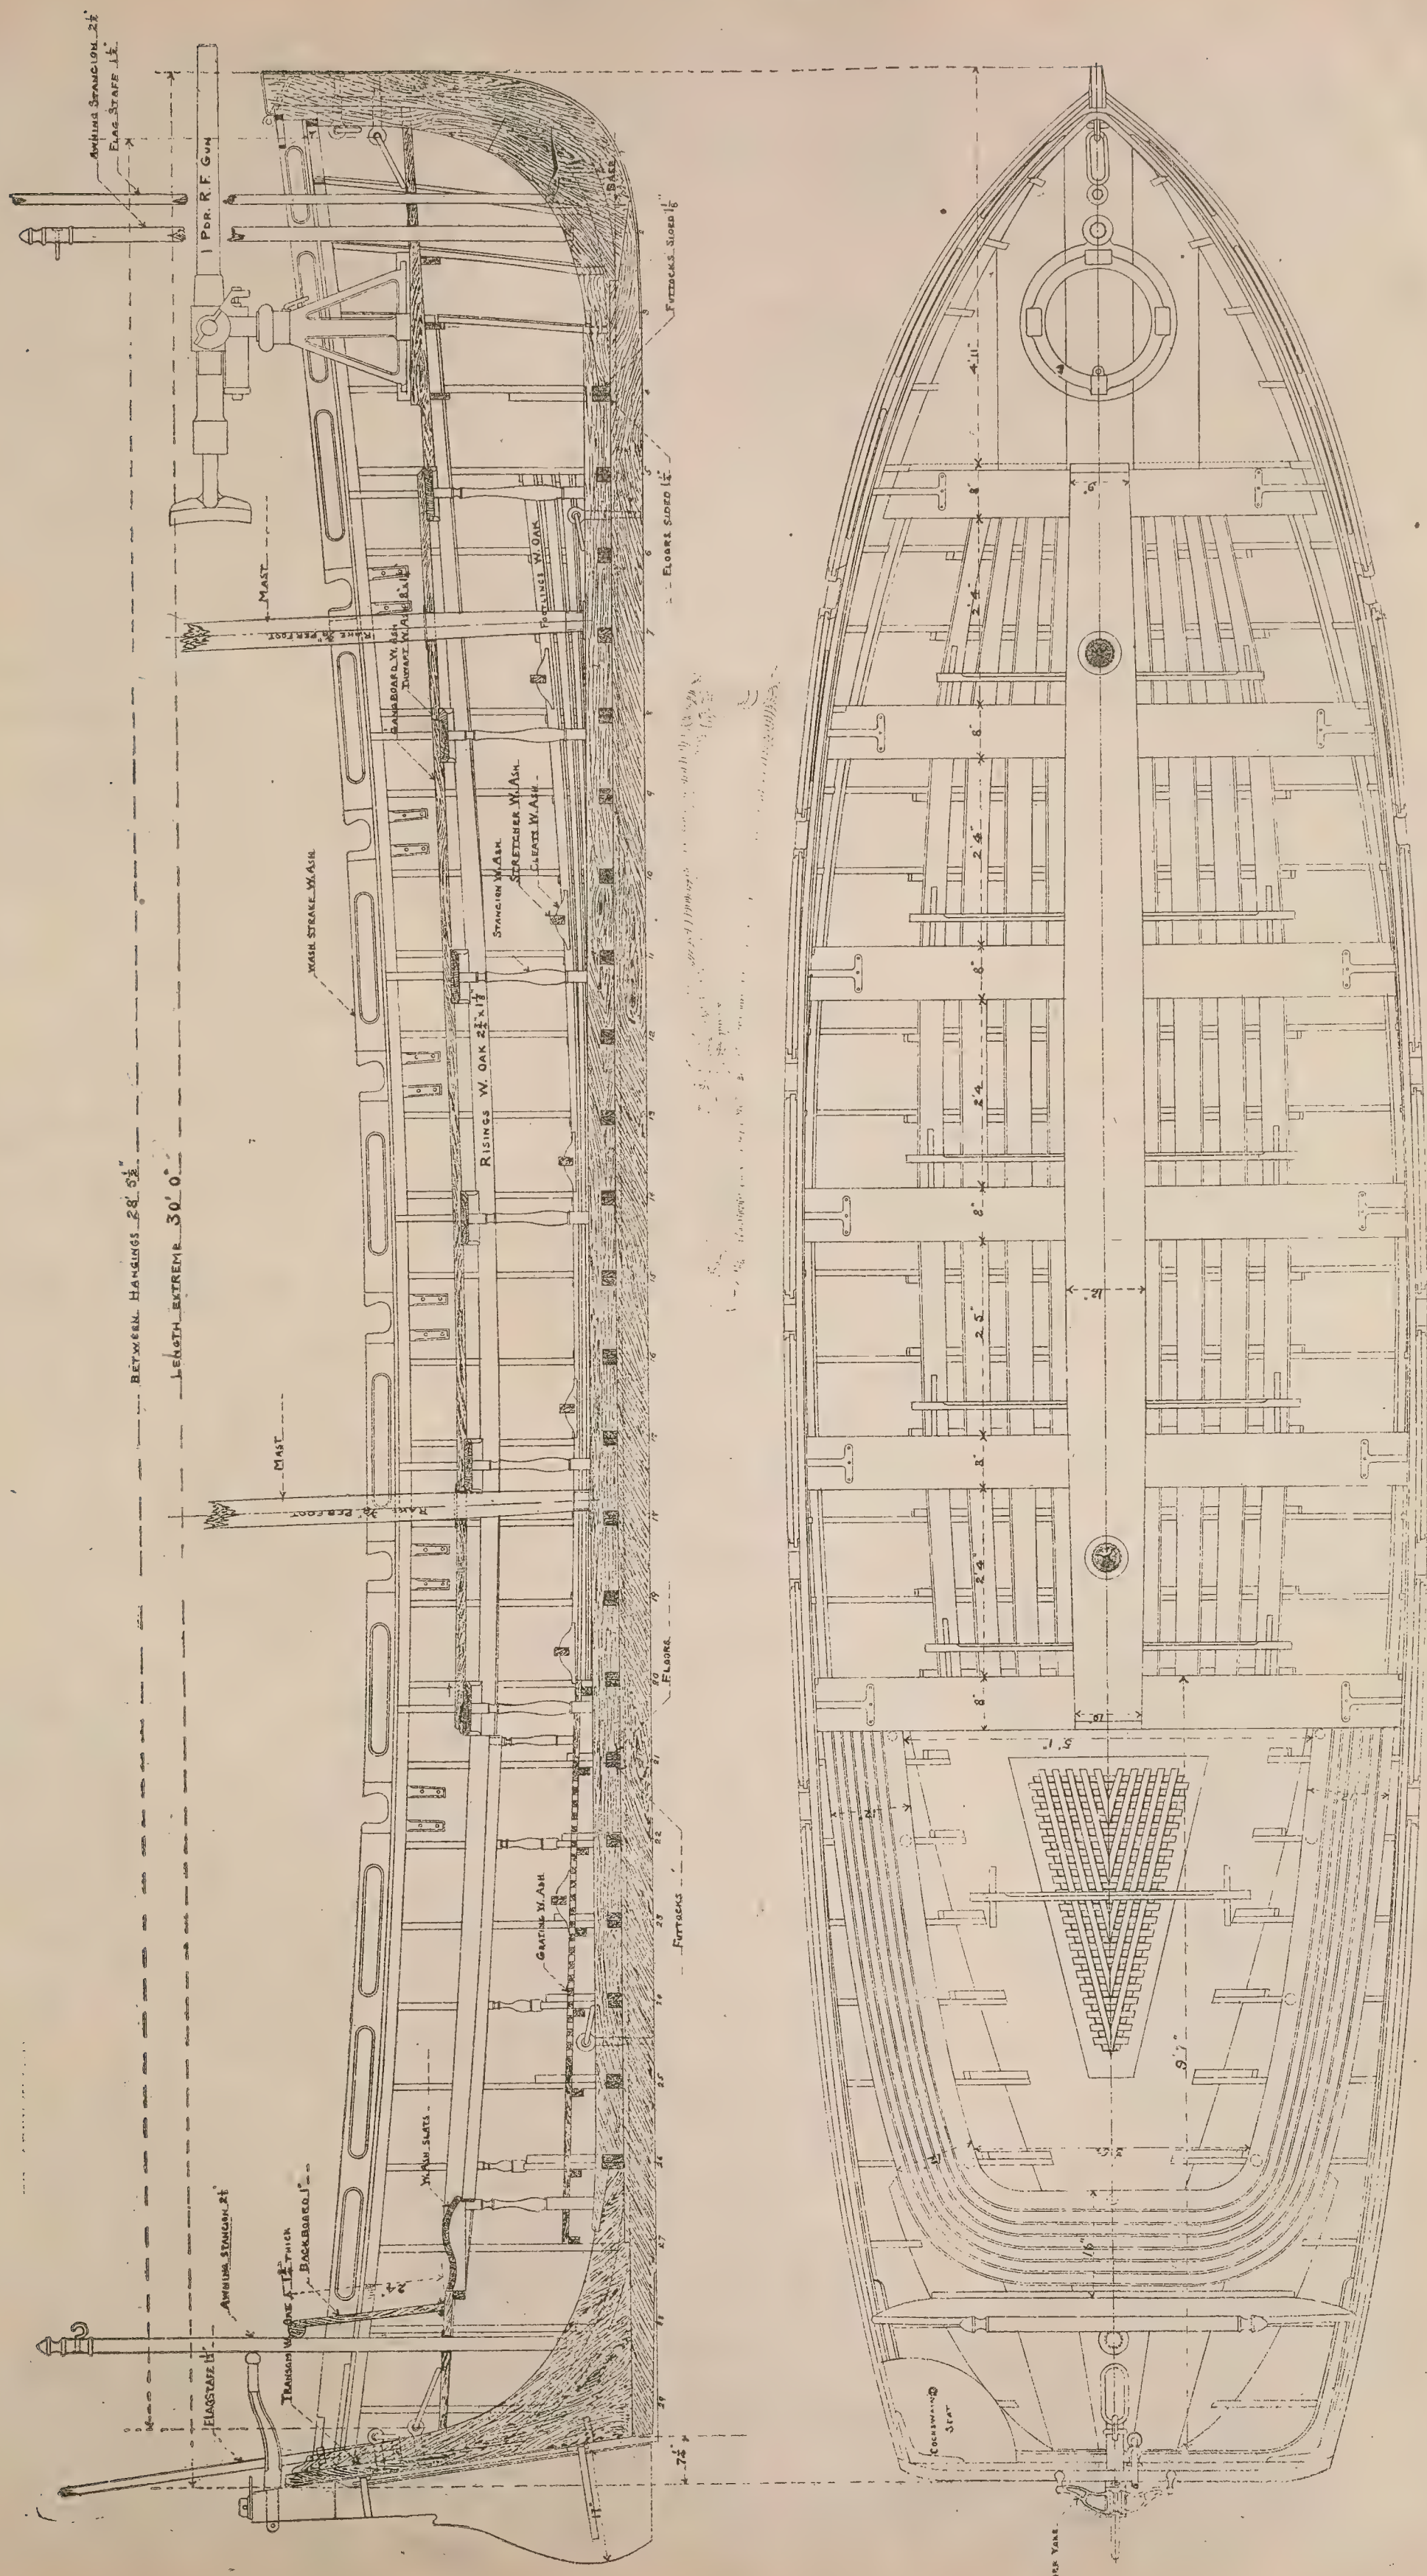
WILLIAM Q. PHILLIPS.



The new year will probably witness an important consolidation of two of the Sound clubs, the New Rochelle Y. C. and the Corinthian Fleet of New Rochelle. The two have existed side by side on Echo Bay for some years; in company with the Huguenot Y. C., a mile or so away on New Rochelle Harbor, drawing their members mainly from the city of New Rochelle. The N. R. Y. C. has had its club house on the main land, while the Corinthian Fleet has had the old mansion on Harrison's Island, about 200yds. distant. For some time past a movement has been on foot to consolidate the two into one strong club, utilizing the very favorable site of the fleet for the large club house of the yacht club. The arrangements are now nearly completed, and it is probable that the union will begin early in the new year. The change will be of advantage to all parties, the two clubs, the yachtsmen of New Rochelle, and the Sound yachting generally.

The Merrit-Chapman Wrecking Co. has raised the yachts Alsacienne, Rival and Halycon, sunk at Port Jefferson in the recent gale.

30-FT. GIG WHALEBOAT—GENERAL ARRANGEMENT.



The Standard Navy Boats.

THE accompanying illustrations show further details of the standard navy boats, the lines of which appeared last week. In all of these boats, as stated previously, the quality of speed has been given but a subordinate place, the consequence is that the boats in all classes represent a high degree of serviceability and real efficiency. Great attention has been paid to the construction, to insure strength and lightness and general adaptability to hard service. The designs cannot fail to prove useful to the many who require boats of various kinds for other purposes than racing.

The Sound Y. R. A.

THE special general meeting of the Sound Y. R. A. for final consideration of the proposed scantling restrictions and changes of rules takes place on Tuesday evening, as we go to press. We hope to publish next week the full text of all new and amended rules. On Tuesday of last week, early in the evening, a most unexpected disaster overtook many of the New York papers. Most of these, including the FOREST AND STREAM, are now set by machinery instead of by hand, by means of a machine termed the Linotype (line of type), in which each line as set is cast solid. The machines are provided with melting pots for the type metal, heated by common illuminating gas. A very large new gasometer, just erected, was wrecked in some unknown manner while being tested, killing and injuring a number of persons and wrecking several buildings, besides doing much damage through the flooding of the streets for blocks around with water to the depth of many feet. Though remote from the scene of wreck, the printing offices, including those of many of the great dailies, were robbed of their supply of gas without a moment's notice; the molten metal congealing in the pots and the offices being left in darkness. In the FOREST AND STREAM office the last piece of work, the report of the Executive Committee of the Y. R. A., was set up, except the two closing paragraphs, but was not yet revised, and the errors corrected in the type. Sufficient light to work by was obtained through a supply of candles, but it was impossible to use the machines, so the last few lines were set by hand with the old movable type, and some corrections were made in the same manner. It was impossible, however, to correct the entire page, and a great many minor errors consequently appeared.

Coronet, schr., F. S. Pearson, arrived at Nassau, N. P., on Dec. 16, after a ten-day passage from New York, with mainmast sprung at the head and mainsail carried away.

STANDARD 30FT. NAVY CUTTER CONSTRUCTION.

The Seawanhaka Cup.

THE Montreal correspondent of the Boston Globe writes as follows concerning the negotiations for the Seawanhaka cup match for 1899:

Only one clause stands in the way at present of the adoption of the agreement of rules to govern the coming races for the Seawanhaka international challenge cup. This clause was proposed by the Seawanhaka committee. Outside of this the two committees who have charge of the preliminary arrangements have settled everything amicably. To finish matters, however, it will be absolutely necessary for the Seawanhaka committee to back down on this, its last demand. It is to the effect that, for the purpose of making the boats very safe and almost non-capsizable, they be provided with 1,800lbs. of ballast. This plan, as far as the Royal St. Lawrence Y. C. is concerned, is utterly impracticable. On Long Island Sound boats with a draft necessitated by such an amount of ballast would go well, but on Lake St. Louis, which is extremely shallow, deep draft boats are entirely out of the question. The Royal St. Lawrence committee has marked its objections to New York, and there is little doubt but the gentlemen there will, by waiving the clause, expedite matters.

The sailing committee has no longer, as in former years, charge of the Seawanhaka cup matter. It has been decided that the sailing committee ought to give in future more time and energy to the development of the club's domestic racing matters, and for that purpose a small committee of three, with Mr. A. F. Riddell, the vice-commodore, at its head, has been selected.

As to the sailing committee, its personnel has been changed entirely, and the chairman, who has taken Mr. Duggan's place, is Mr. J. J. Riley, Jr. Mr. Duggan has declined all official positions offered him, and so has Mr. J. C. C. Almon, who has been such an efficient secretary during the previous international races. The reason for this is partly to gain all the time possible for designing boats, and partly to give some others a chance to try their hand at officiating. That Mr. Duggan will need all the time he can possibly obtain can be imagined from the fact that in addition to designing and building a few boats for the Seawanhaka races, he has just submitted plans to the sailing committee for a 22ft. knockabout one-design class, which has been adopted, and of which kind about a dozen boats will be built next season. These boats will be virtually 32ft. over all. Last year he started a 17ft. one-design knockabout class, of which about six boats were built. Besides this, he has just accepted a commission from a syndicate in Toronto to design a 35-footer to sail in the trial races which will select the defender of the Canada cup. The members of the syndicate had been at him for a long time, and although he was not anxious to try, on account of the many other orders for small boats he can count upon, and which will have to be attended to in his free time, he finally agreed yesterday, at the advice of his friends here, who always hope that some day he may be induced to design a Canadian boat for the America Cup.

This is not by any means the first time that Mr. Duggan has designed a boat of the large class, but the first time that he has designed one for international competition. The boat will be sailed by Mr. Morse, of the Standard Bank, and will cost about $3,500. It was the original intention of the Toronto people to have the boat built here under Mr. Duggan's personal supervision, but here again our shallow water played us false, for if she was built here it would be impossible to launch her.

The Canada Cup.

FROM all that we can learn, the coming contest for the Canada cup, between the holder, the Royal Canadian Y. C., and the challenger, the Chicago Y. C., promises to be one of the interesting events of the year to yachtsmen on salt as well as fresh water, and on both sides of the line. The defense of the cup promises to bring out the best talent of Canada, and a number of yachts are promised for the trial races. It is known that Mr. Duggan will design one, while several will be turned out in Hamilton, where of late years a fast type of fin-keel has been developed, at Kingston, and in other ports. Besides these, it is probable that Mr. Fife and some of the English designers will be called upon for designs.

On this side of the water active efforts will also be made to regain the cup. Chicago will be foremost in these, but other ports, Toledo, Detroit, Cleveland, Buffalo and Rochester are discussing the new class, and some of them will send representatives to the trial races.

The new 35ft. class offers special inducements to the lake yachtsmen. In the first place there is a certainty of the regular establishment of the class in 1899, with races for all who care to take part in them. In the second place, while it is impossible to predict with certainty just what special type, if any one, will be most successful, with the scantling limit to bar the production of flimsy craft, and with the possibilities which the rule offers of producing a fast and yet really good boat, no one need hesitate about building. If affairs are managed properly on both sides of the line, the yacht fleet of the Great Lakes ought to be richer next fall by a fleet of fine modern racing yachts of moderate and wholesome type.

The Royal Canadian Y. C. has already taken steps toward one defender of the Canada cup from which much may be expected. A syndicate of yachtsmen, including Geo. P. Reid, general manager of the Standard Bank; Frank M. Gray and others, has persuaded Mr. Duggan to design a 35-footer, the yacht to be built in Toronto. Mr. J. Wilton Morse, of Toronto, will be in command of the yacht. If the following alleged interview is true, the cup may be considered as already safe in Chicago; A. G. Cuthbert, the designer and builder, of Chicago, is credited with saying:

"I never was so confident of winning a race as I am this one. I have just returned from Canada, and have seen the preparations made for the race. My designs, of course, while perfected, will not be given out, and the house I erect to build the yacht in will be from 5 to 50ft. longer than the yacht, so that no one can judge even of its length. You can say for me that we will bring back the cup and incidentally win the largest purse ever offered for a race of the kind."

Mr. Cuthbert is one of those Americans who believe in the Payne exclusion bill, and the protection of American labor from the destructive competition of imported products. He is the son of the late Alexander Cuthbert, of Trenton, Ontario, so well known as the designer and builder of the Canadian yachts Countess of Dufferin and Atalanta, which raced for the America Cup in 1876 and 1881.

Corsair.

THE new steam yacht Corsair, third of the name, built to replace the second, sold to the Government last summer, and since famous under the name of Gloucester, was successfully launched on Dec. 12 at the yard of T. S. Marvel & Co., Newburgh. Like the second Corsair, she will be the flagship of the New York Y. C., her owner, J. Pierpont Morgan, being the commodore of the club. The yacht was designed by J. Beavor Webb, designer of Genesta, Galatea, Freda, Tara, Carman, Sultana, Utowana, Corsair II., Sovereign and other sailing and steam yachts. The W. & A. Fletcher Co., of Hoboken, have the contract for the yacht, and will build the machinery, the hull work being done by Marvel & Co. The yacht is similar to the second Corsair, but larger, and of course finer, in accordance with the greatly increased elegance of the modern steam yacht, and the various improvements of the past seven years. The hull is of steel, 302ft. over all, 252ft. 6in. l.w.l., 33ft. 3in. beam, 20ft. 6in. depth of hold, and 15ft. draft. She will be schooner rigged, with two pole masts. The motive power, designed for a speed of nineteen knots, will include two sets of quadruple expansion engines, with twin screws, and two large Scotch boilers.

Com. Morgan, with a large party of friends, arrived at Newburgh early Monday morning on a special train, and found everything ready for the launch, the ship being sent off a short time after their arrival. As she started down the ways she was christened by Miss Louise Morgan, daughter of the commodore. The hull has been towed to Hoboken, where the engines and boilers will be put in, and the other work completed. Capt. C. E. Bailey will be in command of the yacht.

YACHTING NEWS NOTES.

The Spaulding St. Lawrence Boat Company is now busy with a set of very fine yacht boats, including a 33ft. launch, 26ft. gig, 18ft. cutter, and 15ft. dinghy, all of mahogany, for the twin screw steam yacht building at Chester for A. E. Tower, of Poughkeepsie, N. Y., from Gardner and Cox's design.

Capt. Charles G. Lundborg, a naval architect, died Saturday, Dec. 3, from Bright's disease in the Hahnemann Hospital, at Sixty-seventh street and Park avenue, New York. He was born in Stockholm, Sweden, seventy-four years ago. After graduation from the Naval Academy he became a lieutenant in the Swedish navy. When only twenty-two years old he taught astronomy in the schools of New Orleans.

He returned to his seafaring life after a few years' experience in teaching and became a captain of a sailing vessel, and soon held large interests in extensive merchant marine service.

Naval architecture subsequently became the specialty of the Swedish captain. During the Crimean war he was sent by a wrecking company to Russia to raise the sunken ships of the Russian fleet off Sebastopol. Although unsuccessful, the mission won for him a name. Later he was a consulting engineer for the American Steamship Company. The twin screw, chiefly used by American liners, is largely his invention. He planned and draw the designs for several of the war ships now in the American navy.

Lundborg lost and won several fortunes in mines and mining interests. While employed by the United States Government he became personally acquainted with Lincoln. He married in 1870 and soon after became an American citizen. He was a member of the American Y. C.

While on board the Paris last November, bound for New York, Lundborg was taken ill. Arriving in New York he cabled for his family in Stockholm. He died ten days later among strangers. His widow and oldest son reached New York on the Germanic yesterday. He also leaves a son and daughter in Sweden.—New York Herald.

The Douglaston Y. C., at the meeting of Dec. 12, elected the following officers: Com., Clay M. Greene; Vice-Com., Hazen L. Hoyt; Rear Com., William G. Newman; Sec'y, Edward M. MacLellan; Treas., George A. Corry; Board of Governors, F. E. Barnes, Joseph R. Grismer, Harry M. Gillig, L. S. Harway, B. M. Wallace and George A. Corry. The club has for several years contemplated a new house, the old floating house being entirely inadequate to its needs. Owing to the difficulty of selecting a suitable location on Little Neck Bay, action has been deferred from time to time. The gale of last month nearly destroyed the old house, making it imperative to rebuild it, and the club has decided to make an entire change of base, moving to Manhanset or Great Neck Bay, the next bay to the eastward. The bay is larger and the water is much deeper than Little Neck Bay, and the mouth is opposite Hart's Island instead of Throgg's Neck, thus opening on a broader part of the Sound.

The New York Y. C., through its special committee, E. M. Brown, Com. Morgan, Vice-Com. Ledyard, Sec'y Oddie, Treas. Hurst, J. J. Astor and Arthur Ingraham, has selected the plans of Whitney Warren for its new club house, those of George A. Freeman being the second choice. Work is now under way in clearing the site.

On Dec. 9 the keel of the new yacht for P. A. B. Widener was laid at Neafie & Levy's yard, Philadelphia, Pa. The yacht will be 257ft. over all, 216ft. l.w.l., 30ft. 3in. beam.

Varuna, steam yacht, made but a short stay in port, sailing from New York on Dec. 14, with her owner, Eugene Higgins, on board for a long cruise. She will first visit Bermuda, then Havana, Santiago and other West Indian ports, and then proceed to the Mediterranean, calling at Madeira.

Isolde, the Herreshoff 20-rater, sister to Niagara, after being laid up ever since the fatal collision with Meteor two years ago at Cowes, in which her owner, Baron Zedwitz, lost his life, has just been sold to an English yachtsman.

The Yonkers Y. C. held its annual meeting on Dec. 13, electing the following officers: Com., William J. Bright; Vice-Com., Herbert James; Fleet Capt., Edward Montross; Fin. Sec'y, J. J. O'Leary; Rec. Sec'y, Jerome Ryer; Treas., James W. Shaughnessy; Meas., George B. Warren; Trustees, J. J. Wilner, A. M. Potter, W. J. Lord and Thomas J. Shaughnessy; Delegates to the New York Yacht Racing Association, Com. Bright, J. W. Shaughnessy and Herbert James; Regatta Committee, Frank Smith, William Brazier and W. J. Lord, and Float Committee, George B. Warren, Frank Smith, William Brazier, Edward Montross, Herbert James, J. J. O'Leary and W. J. Lord.

The annual meeting of the Pavonia Y. C. was held on Dec. 13, the following officers being elected: Com., David W. Kohn; Vice-Com., William B. Wilson; Fleet Capt., John Wright; Fleet Surgeon, Dr. Louis Bowman; Fin. Sec'y, William F. Tobin, Cor. Sec'y, William A. Miller; Treas., Louis Mittlesdorf; Meas., A. P. Curtis; Board of Trustees, Col. F. G. Agens, Enoch J. Smith, John F. McNulty, Garret Van Horn and James Woodruff; House Committee, Norman L. Rowe, James Morey, John A. Zimmerman, William Willis and John W. Target.

Trap-Shooting.

Fixtures.

Dec. 19-23.—Indianapolis, Ind.—Grand Central Handicap; targets first day; sparrows two days; pigeons two days. H. T. Hearsey, Sec'y.

Dec. 21 and every Wednesday thereafter till March 29, Feb. 22 excepted.—Wilmington, Mass.—Prize handicap series of the Boston Gun Club; address 23 Elm street, Boston.

Dec. 22.—Newark, N. J.—Regular shoot of the East Side Gun Club.

Dec. 26.—Newark, N. J.—Christmas shoot of the East Side Gun Club.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

Dec. 28-29.—Auburn, N. Y.—Auburn Gun Club; live birds and targets. C. W. Tuttle, Sec'y.

1899.

Jan. 2.—Newark, N. J.—Annual shoot of the South Side Gun Club. I. H. Terrill, Sec'y.

Jan. 2.—Newark, N. J.—New Year's shoot of the East Side Gun Club; live birds; begins at 10 A. M.; main event at 15 birds, $5, birds extra.

Jan. 5.—Newark, N. J.—Tournament of East Side Gun Club; main event, match between Morfey and Schortemeier for E. C. cup and State championship.

WESTERN TRAPS.

Looking East to Elkwood.

Dec. 16.—In the minds of a great many Western men the comment of the FOREST AND STREAM in last week's paper on the Grand American Handicap was timely and well considered, and its position a just one. The managers of the Grand American Handicap have no occasion to be seriously disturbed by any newspaper talk looking to the immediate abolishment of the event if certain conditions are not immediately complied with. There is only one way to run the big shoot, and that is to run it, or quit. The shooters of America are entitled to one finish event, and at that event only men should come who can afford to lose and who can take their medicine like sportsmen. The success of the shoot is not a question of size, as has well been stated in the editorial above referred to. You may leave out every sorehead in America and still have enough sportsmen left to make the Grand American Handicap the greatest shooting event of the year. The West will send plenty of thoroughbreds, and that may be set down as sure. For those who classify less under the latter title than the former, it would appear to be the natural and just position of the management that, if they wish to stay at home, there is a large and restful vacancy awaiting them in the vicinity of their own homes, which it may be well for them to occupy. The band can still play on.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Elliott vs. Smith.

ST. LOUIS, Mo., Dec. 7.—The race between the local crack, Dr. Smith, and J. A. R. Elliott, the well-known expert from Kansas City, was shot at Dupont Park on the above date. The showing of the Doctor was a great disappointment to his admirers, as it was only in the early part of the race that he displayed the form expected of him after the remarkable score he shot against Dr. Knowlton a week ago. In the first string of 25 he scored 24, and led Elliott 2 birds, as the latter scored 22. In the next string the score was reversed, so that at the end of 50 birds the match was a tie, each having 46 birds to his credit. After this, however, the shooting of the local man became very ragged, especially in the final string, for in this on two different occasions he lost 3 birds in succession. The final score was Elliott 91, Smith 84. It will be seen that the Kansas City man maintained the form displayed in the commencement of the race.

Dr. Smith's score of 84 is the poorest he has ever shot on the local grounds, and is anything but satisfactory to him. He therefore requested Elliott to shoot him another match. The latter stated that his time would be so much occupied until next June that he was unable to set any definite date.

The conditions of the race were 100 pigeons per man, $100 a side, A. S. A. rules, loser to pay for the birds. The scores ran:

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

	1	5	4	3	1	1	4	1	3	4	2	4	3	5	5	3	5	4	2	4	4	3	2	4	4

Elliott shot a Winchester repeater gun, Hazard powder in Leader shells. Dr. Smith shot an L. C. Smith gun, Du Pont powder in Trap shells.

The weather was clear and cold, and the birds should have been very good.

PAUL R. LITZEE.

DRIVERS AND TWISTERS.

The Remington Arms Co. has published a most attractive prize offer to the shooters competing in the Grand American Handicap, April 11-13 next. To the winner of first they will present one of their finest hammerless ejector trap guns, value $300. To the winner of second, a fine hammerless ejector trap gun, value $150. To the winner of third, a fine ejector hammerless trap gun, value $100. These prizes are conditional on each shooter winning with a Remington gun, and they will be made to order to suit the winners. They call attention to the fact that the last Grand American Handicap was won with a Remington hammerless and U. M. C. factory-loaded ammunition, and that history often repeats itself. Any information as to further particulars in respect to this generous offer can be obtained by addressing the Remington Arms Co., 315 Broadway, New York.

Mr. E. D. Fulford, of Utica, N. Y., famous as a mighty man with the gun at all times, and in particular famous as the winner of the last Grand American Handicap, has officially intimated to the Daddy of Them All, who is himself nimble with the gun, that he would like to debate the possession of the E. C. cup for the world's championship at inanimate targets, his check for $50, the needed amount to be posted, indicating that he considers the situation serious. The matter is related by Mr. Banks elsewhere in our Trap department.

The averages for 1898 of the O. K. Gun Club, of Kansas City, Mo., are as follows: C. S. Gottlieb .966, C. C. Herman .913, Ed A. Hickman .905, W. H. Herman .903, F. N. Cockrill .894, J. N. Curtice .883, James Sweet .854, C. B. Cockrill .826, C. L. McDonald .816, J. M. Bramhall and E. O. Hudson .800, F. A. Lamb .794, J. W. McCurdy .746, H. S. Fergerson .733, C. F. Holmes .666, F. M. Berkey .661, G. M. Walden .600. The officers are: President, Conway F. Holmes; Vice-President, H. S. Ferguson; Secretary-Treasurer, Ed A. Hickman.

While the Morfey-Doty match was in progress, two young men, who apparently were new to the sport, and who watched it with eager interest, notwithstanding that they were shivering with cold, evolved the following between them: Said one: "Why is it that they shoot both barrels at a bird when it is killed with the first barrel?" "They have to do that," replied the other, "to make it count a whole bird." Both were perfectly serious and watched the match with the critical eye which comes from a minute knowledge of detail.

Under date of Dec. 17 Mr. Ed O. Bower, secretary-treasurer of the West Virginia State Sportsmen's Association, Sistersville, W. Va., writes us as follows: "The West Virginia State Sportsmen's Association will hold their third annual tournament on June 20, 21 and 22, under the auspices of the Wheeling Gun Club, Wheeling, W. Va. There will be added money and merchandise prizes, which will be announced later. For further information, etc., address John B. Garden, secretary, Wheeling, W. Va."

Mr. Platt Adams, one of the most popular and best amateur shots of New York, goes to San Antonio, Texas, to spend the winter duck and quail shooting with his brother, Mr. A. W. Adams, of Chicago, who is also a famous trap-shooter. Mr. Adams may visit Los Angeles, Cal., before his return. The Messrs. Adams are skillful amateur photographers as well as skillful shooters, so that without doubt the outing will be a success in its shooting events and in the pictorial history of it.

Nothing funnier has ever appeared than Mr. Hough's good-natured satire on the craze for pedigree, regardless of the dog or his performance, the proclivity for interminable bickerings of trifles, and the status of the meat dog as against the dog which might be styled as being of the school of the impressionist. There is a merry laugh in every line of it. Those who read the department devoted to Game Bag and Gun in our columns will find it.

Mr. E. S. Rice, of Chicago, entertained a number of out-of-town shooters at his home, 5513 East End avenue, on Friday evening. In the early evening luncheon was served mid many cracking jokes and funny stories, after which they were entertained by musical selections on the piano, guitar, as well as vocal selections rendered by several members of an operatic company now in the city. The host made a pleasing talk. So Mr. A. C. Paterson writes us this week.

The experiences of Ex. C. F. (Ex-Champion Fudger), set forth in this issue of FOREST AND STREAM, are worthy of the earnest perusal of trap-shooters. The gentleman who over that nom de plume recounts his experiences is one of the best shooters about New York, being a good class man in every respect, his greatest obstacle to even scores being the fault which he so fully describes. His suggestions should be noted with care.

The bad weather was much against the best performance of Miss Annie Oakley, the famous expert with rifle and shotgun, and Mr. Frank Kleinz, of Philadelphia, in their match at 25 live birds, Charter Oak Park, Gloucester, Pa., last Saturday. As it was, the race was very close, Kleinz winning by a score of 17 to 16. Kleinz stood at 30yds., Miss Oakley at 28. Hurlingham rules, 50yds. boundary.

The Peters Cartridge Co., Cincinnati, O., has issued a most attractive illustrated calendar in colors for 1899. Scenes portraying success with the wild ducks, the game of the shotgun, and the pursuit of the boar and wild elephant, the game of the rifle, give abundant food for reflection in respect to what their products will accomplish.

Our Reading, Pa., correspondent sends us the gratifying information that a new club is to be formed in Reading, with the most substantial support in the numbers of the charter membership. Few sections of America have the shooting activity of Pennsylvania.

John Wright, manager of the Brooklyn Gun Club, announces an invitation live-bird shoot on Jan. 10. The programme is not yet arranged, but it will be made with a view to the largest amount of sport with a reasonable outlay.

The annual meeting of the New Utrecht Gun Club will be held Dec. 29, at Robert Supper's Avon Beach Hotel, Bath Beach. There will be a dinner afterward. The club shoots live birds Dec. 24.

The Interstate Association meeting on Monday of this week decided that high guns shall govern the divisions of the moneys at the next Grand American Handicap.

The contest for the Chicago challenge trophy, fixed for Dec. 20, has been postponed to the 24th inst., at 2 o'clock.

A merry Christmas to all.

BERNARD WATERS.

Confabulations of the Cadi.—XIV.

Christmas at the Cadi's.

It was late evening of a mid-December night, in a year prior to that in which the Egyptian Gun Club meetings were held, in the region of Egypt. The good Cadi sat alone by his fireside, in a homemade easy chair which his sweet wife, with a mind to his special comfort, had cushioned and padded with pieces and patches of worn-out garments of many different kinds and qualities. To be more precise, he lolled rather than sat in the chair, yet without any loss of the natural dignity which he bore at all times, whether as king of his own castle or as the leading spirit among his neighbors. It was indeed an ill-constructed chair in which the Cadi could not hump himself into some posture of ease and contentment; but in his own easy chair, made with a special view to his repose, he fairly revelled in the pleasure of inertia. However, sitting on any chair, log, rail fence, etc., seemed quite to the Cadi's compass and fancy at all times. He quite philosophically took his comfort on the lines of least resistance.

Hopie Jane, with her brood of white-haired prospective presidents, and white-haired prospective brides of future millionaires, had passed into dreamland some few hours before, in the adjoining room. The candle had long since burned out. All was quiet, but for the rag-time melody of the pack of robust snorers in full cry in the aforementioned room, and the weird buzzing of some large slivers and the irregular thumpings of some loose boards which were on the house outside, buzzing and thumping in merry responsiveness to the cold, gusty wind which whistled dolefully around the corners. To a more imaginative person there might come fears of wandering evil spirits importunately demanding entrance to smash the lares and penates of the family; to the Cadi, the grewsome noises simply brought to mind that Hopie Jane had not understood his suggestions, made earlier in the fall, that the weather boarding needed nailing before the winter weather set in. Nevertheless, it was reasonably quiet. The hogs under the house pressed fervidly to the base of the chimney for the warmth of it. Excepting a fierce protest betimes from a disturbed one, which thought that the warmth of the chimney should be a class affair rather than high prizes, even they were silent. In short, as measured by the household standards of silence in use since the time the happy Cadi had become so numerously a parent, absolute silence reigned.

A cheerful fire glowed in the old-fashioned fireplace, intermittingly flashing, ducking, spreading or roaring in sympathy with the draughts of wind, as they came in through the floor, the walls, the roof or down the chimney, thereby lighting up the room fitfully and throwing all degrees of flickering lights and shadows on the giant at rest. He was in profound meditation, as indicated by his posture, stillness and half-closed eyes.

There is a distinction between contemplation and reverie, as observed in practice by careful writers. Had the good Cadi been in other than humble circumstances, and had the wolf hovered further from his door, he might have indulged in reverie in due conventional form; that is to say, his eyes would have been opened to their widest limits, showing a large area of whites, with a set look into futurity at an angle of forty-five degrees.

Nevertheless, a hero, who in the Yuletide does not submerge himself in reverie, is rather a disappointment to himself and his admirers. Your hero in a reverie radiates with romantic possibilities, therefore is deserving of infinite gravity and unremitting attention as to treatment. His situation is one of suspended action, with retrospective, introspective, associational, and prospective significance. In the Yuletide reverie, objective life is sublimed and beautified. Life's panorama moves through an envelope of rose-colored haze, softening all the harsh points, while the conventional theme is always limited to one of three—first, the hero, far back in the years, sees Towser, a dog of supercanine intelligence and superhuman devotion, standing on beautiful points on beautiful partridges in a fairy dell, in a mellow sunshine, the foliage resplendent with the bright colors of autumn. The hero with the eye of reverie sees himself in the center of it all, erect and with the elastic step of youth, advancing, flushing, shooting, killing, gathering the birds, ordering the dog on, and eagerly and untiringly striding on and on over hill and through vale all the livelong day. In his vision, returning to his own hour, he sees the ghostly Towser pointing ghostly birds in a game land of utter silence, himself following, gun in hand and a-weary; and he notes the difference between the white-haired man of to-day and the same man of forty years ago.

Or, for the second conventional theme, the hero's visions must be of a beautiful, blue-eyed goddess, willowy of form and graceful of movement, who won his first love, or, rather, who had it bestowed from mere propinquity—a love which he vows would have been a love eternal had it been reciprocated, and strangest of all, he believes his own vow, notwithstanding that he has fallen in and out of love fifty times in the meantime, showing no signs that he had constancy for a year, to say nothing of it for eternity. Still, the spurning of his love is what he best remembers, and the smart of the spurning is what has clung so tenaciously in memory through the years instead of a lasting love which is lost, though the ego blinds him to it. Moreover, later years proved that what he thought was a feature of the etherial beauty of the goddess was simply the symptoms of her sluggish liver.

Or, third, in the conventional reverie, the hero must bitterly regret the wasted years of his youth, wherein in fancy were the opportunities to shine and reap princely profits in the world of politics, of law, of commerce—something at least which insured large profits with little work. In a reverie, one can accomplish a great deal with a small amount of capital.

But the Cadi was no hero. A dead dog to him was a dog which ceased to be useful. A lost love to him was but a piece of flotsam which on life's ocean had passed beyond his vision. He had no regrets for the lost opportunities of his youth; for, first of all, he hadn't had many, and what he had had were humble. He further had noted that many men who were inspired with the belief that they could and should shine, found on trial that they were utterly devoid of even the elementary qualities of shining.

Yet the Cadi was not without some retrospective thoughts. A shadow of pain passed over his face. He carefully pulled off his cowhide boots, painted his corns with iodine, muttering that if he had to live his life over again he would not force his No. 10 foot into a No. 8 boot day after day and year after year to please Hopie Jane nor any one else. Then, after rummaging about, he found a few sheets of crumpled writing paper, leaned close to the firelight, and with much care wrote as follows:

"Egypt, Dec. 15, 18—.

"My dear kind sir and friend:

"In conformity with my invariable custom in the holiday season, in respect to my friends, I drop you a line to wish you and yours a merry Christmas. As I sit here alone to-night, with the hands of the clock drawing near to the figure 12, my thoughts again and again revert to the happy days—all too few—which we had together last month, shooting quail; and also, to me at least, the happy hours I passed in listening to your improving and edifying conversations. What a vast fund of wisdom and knowledge of the world you do possess! I often have a yearning for a broader life than is possible in my isolated condition; but when I think of my wife and little ones, and their helpless condition if I were gone, I feel reconciled to my lot. I hope that you will be with us again next year, when the quail are ripe; sooner if you can. A grateful feeling comes to my heart when I think of the honor you bestowed on me and mine in visiting our humble abode, and of your great goodness in condescending to be pleased with our efforts to make your stay a pleasure."

"That will do for the introductory," muttered the Cadi, as he filled his pipe and rested for a few moments. "Let me see—eleven kids, Hopie Jane and myself. That's thirteen. Said to be an unlucky number. I will write my own postscript first."

Then he added this to the foregoing letter:

"P. S.—I wish that you would send me a two-gallon demijohn of good whisky, if you can do so without any inconvenience. Send the bill with the goods. I would send you the money herewith, but prefer to do so later when I collect some debts which are now past due."

It may be remarked, en passant, that the Cadi would never as payment accept a cent from any guest who shot with him during the season. He might borrow a few dollars of them, to be spent for their own greater comfort; and incidentally for that of his family. He had found by many years of experience that it was better to leave the obligation as an open account, to be drawn upon tactfully, according to circumstances.

"Now for Hopie Jane," he soliloquized. "Mr. So and So will be the best man to write to in this case. He seemed to think that I should work more and Hopie Jane less. I think this will appeal to him," and the Cadi at the end of the second letter wrote as follows:

"P. S.—Hopie Jane desires that I convey to you her kindest regards. The poor little woman has not been feeling well of late; I wish to make her feel happy in the Christmas tide. I should make her so of all the world, for she is a devoted wife; but I will have to be less generous than I wish to be. Will you be so good as to send me, with the bill for same, one pair No. 7 kid shoes for her, twenty yards of best broadcloth, and a winter hat for her which I will leave to your excellent taste in choosing. I cannot get these things here, otherwise I would not annoy you in the matter. I will remit promptly on receipt of the bill.

"C."

He wrote thirteen letters, all alike, excepting the postscript, and in each instance the goods mentioned were such as the recipients respectively dealt in.

The wants of the children all the way down the line were considered, and in like manner thoughtfully provided for by eleven postscripts to the circular letter, each guest being apportioned his proper quota of contributions.

Three days before Christmas the Cadi's humble domicile had the appearance of a rustic notion store. There was a box, containing about two bushels of confectionery for his oldest daughter, sent by a manufacturer of candies; shoes and cloth for Hopie Jane, and a hat, the facade of which was a wonder of flowers and ribbons; shoes, gowns, toys and packages of confectionery for the girls; a drum, bugle, cheap gun, shoes, hats, suits of clothes, and story books, etc., for the boys, though they could not read a line, and probably never would.

The Cadi was then quiet and pleased. Thirteen might be unlucky, but if so it was unlucky for his friends. In the evening, after all had retired, he had thirteen letters, which he opened and read, each of which acknowledged the receipt of his letter, each returned the compliments of the season, and each writer begged that he would accept the goods sent as a Christmas gift; each excepting the one which referred to the demijohn; that contained a bill; the one thing unexpected. The Cadi glanced over it carelessly, saw it called for $10, and $1 more for expressage prepaid, and quite as carelessly threw it in the fire. In the Cadi's system of philosophy, bills were an unimportant part of a transaction.

Butchers and grocerymen, who did not understand the Cadi's system of business, classed him as a dead beat; yet he could pass so justly on the differences of his neighbors; was such a masterhand at making speeches at barbecues, at Decoration Day and other gatherings, and was such a good shot and companionable fellow generally, seeming to be esteemed and having so much credit with men who lived in great cities, that they murmured but little, and that only among themselves. When a stranger came to town and asked if any one knew the Cadi, the reply was always in the affirmative, with the return query, "Do you?" If the stranger was a decent-looking fellow and disclaimed acquaintance with the Cadi, the resident then would add, "The Cadi is a nice fellow, but if you meet him don't lend him any money." In nine cases out of ten, if the stranger made the Cadi's acquaintance, in less than three days he would do the very thing against which he was cautioned, and thereafter had a life interest in that distinguished philosopher.

Although the Cadi knew that his credit was bad, since he had had many rude rebuffs from his creditors when he had tried to add to what was already a large indebtedness, he bore no malice against his traducers, and would willingly have forgiven them and resumed business relations on the old lines. As it was, he permitted them to do the worrying, while he affably sawed wood in other quarters. Therefore, he had time for contemplation, but not for reveries, whose subjects were abstractions which were in the clouds so far that they would not bear the mildest analysis from the practical standpoint of himself as the head of a lovely family.

The eleven rosebud mouths of his eleven beautiful children, and their affinity for corn bread and buttermilk and rabbit, to say nothing of bacon and still less of turkey, was a constantly recurring fact, and quite as constantly a difficult recurring problem. Also Hopie Jane's beautiful teeth, which in the days of his courtship ever reminded him of a row of pearls, which in time, by dint of repetitions, she came to believe were pearls really, he discovered in later years were for a special purpose of grinding up corn bread and bacon, and that to a degree of grave concern, in so much that it was always interrogatory as to the ways and means of obtaining a new supply. Teeth viewed as works of art or adornment are quite different from teeth viewed as grinding implements; the romantic and the realistic do not harmonize on this point when pearls and bacon come in conflict. The matter of teeth was a serious problem in the life of the Cadi, or to be more precise, it would be serious but for the industry of Hopie Jane and the superb nerve of himself, despite his being an invalid.

Early the next morning he sent out verbal invitations to Moke, Le Loup, Ephraim, Coxey, and other of his shooting friends and boon companions, to each one and his family to appear at the Castle Cadi to partake of a royal Christmas dinner, and to fail not on their peril. Rumor of the good things was already a subject of gossip; and the dinner and the invitations being an annual event for several previous years, they were quite expected and quite as promptly accepted.

A rare collection of spavined, knee-sprung, hide-bound horses were tied to the Cadi's front fence on Christmas Day. Without doubt, they would have been put in the barn had there been one. Some were covered with tattered blankets; others, uncovered, pawed and whinneyed in horse protest. The Cadi's guests had arrived. Hopie Jane, wearing her new three-story hat, had received them with repeated handshakes, assisted by the Cadi and all the children, the Cadi chewing cloves and the children chewing gum. The Cadi immediately took the men folks into the lodge to show them his Christmas present, and when they returned each was wiping his mouth on his coat sleeve or chewing a clove. In the house, most of them sat gingerly on the front edge of the chairs, feeling stiffly uncomfortable in their best clothes, though they attempted to be sociable by making many grave remarks apropos of nothing. The children in particular fretted in their finery, and their anxious mothers fretted still more as they observed the smearings of candy and gum on their children's clothes and the imminent danger of the smearing of their own best gowns.

The Cadi's eldest and largest daughters had by force of arms dressed themselves in the gowns intended for their younger sisters, because said gowns were much tighter around the waist, and being so, had all the best qualities which they desired in a gown. Their feet, short and thick and lumpy, were encased in long and narrow neglige shoes. The boys were dressed in their first knickerbockers, which showed off their slender shanks and huge feet to great advantage. After a few moments, the ladies settled down to a more critical inspection of what each other wore, and felt happy and happier accordingly as they found that they were better dressed, or discovered some defect in the dress of each other.

A mighty brawl soon started among the children. The visiting children had got their hands on some toys, possession matured into an assertion of ownership, which in turn led to a short but clamorous dispute, followed quickly by a general and active hair-

pulling and scratching, with exclamations of rage, anguish and protest. The ruction was stopped only by each mother forcibly corraling her own offspring, giving them a sham slapping, while looking at the others with a look that plainly showed it would be real if they dared do as they looked. In the interest of peace Hopie Jane locked up all the toys. The scratchers and hair-pullers were solemnly assured that they would have no dinner, while the wounded and hurt were placated with large quantities of painted candies.

Then the mothers rolled up their sleeves and, working like beavers, helped to set the long table for the reception of two nicely roasted turkeys, presents from neighbors, and a roasted mast-fed shoat of the Cadi's own raising. The pig was placed in the middle, and a turkey at each end. Pig and turkeys were coffee so strong that one cup was enough. There were odd plates of sweet, freshly laid eggs, boiled turnips, baked biscuits, hominy, corn bread, butter, homemade ketchup, baked apples, a pitcher of native wine, and pumpkin pies to finish on, with a big kettle of coffee so strong that one cup was enough. There were add plates and odd knives enough to supply the visitors, and with baking pans, spiders, dippers, etc., the home people were supplied. By a piece of generalship, each mother placing half of her brood on each side of her, and thus only a moderate degress of snatching and scratching took place, as might be expected when some of the mothers had a strong arm and from six to eleven children. They munched and chewed, and save for a few chokings and alarming strangulations, from which death seemed imminent, they got through the dinner with full stomachs. The Cadi assured the ladies that they need not wait for the gentlemen to finish, whereupon the ladies rose and withdrew.

Then the Cadi pulled a dark bottle from an old basket under the table, at which there was much glistening of eyes and expectant looks. He poured out a generous glass for each, and there was a suspicious aroma of rye. "Before we taste this nip of nectar," said the Cadi, with geutle gravity, "I wish to make a few remarks about the year which is nearly past and gone forever. I know that you are anxious to dring my good health first, and hear the remarks afterward, but the few drops will taste all the better for the waiting. During the year we have had a few differences of opinion, which, as we look at them now, seem trivial. However, at the time of their happening we considered them important. Our own self-interest was then involved, and we are prone to consider that our self-interest is a true part of a genuine universal principle.

"Many of our past ills we can now see were purely imaginary, and those which were more or less real time has cured. At all events, they are now in the past, and there let them remain. Let us begin the year without any carrying over of ancient grievances. Our gun club should endeavor to proceed on harmonious lines henceforth. Personal ambitions should give way to the general good.

"My friends, beware of provincialism. That is the bugaboo of minds in a rut. When one sees the same horizon day after day and year after year, one is disposed to think that his horizon is the only true horizon, and at best all others are but feeble imitations. Beware, I say, of provincialism! Because we are in the habit of doing things as our fathers did, it by no means follows that our ways are the best; and even should they be the best for us, it does not logically follow that they are the best for all others, nor that all things which are different from us are effete. Effete is a good word, a very good word, but it means nothing when misapplied, as do all words when so used.

"Let us shoot all together, forbearing to bar those who shoot better than we can, and not misleading the weaker sisters with false hopes. Let us think less of what we are paid for shooting than we think of what is the sport of it. And now I toast you each and all a merry Christmas, and—"

But here, as if by one common impulse, each man threw the liquid down his throat in one motion, so expert do men become by zeal and much practice.

"It seems to me, dear Cadi," said Moke, "that-er-ah-er-that, considering our credit your words are a little-er-ah-strange, if I may so say."

"There is an old proverb, which says, 'If the advice be good, no matter who gave it;' " the Cadi replied, with unruffled amiability. "The day is passing fast, my friends. I will sing you a little song, which in sentiment I think is more to your liking, and you may all join me if you choose."

He cleared his throat, and in a rasping, cracked voice, sang:

" 'The brown bowle,
The merry brown bowle,
As it goes roundabout-a:
Fill
Still,
Let the world say what it will.
And drink your fill all out-a.

" 'The deep canne,
The merry, deep canne;
As thou dost freely quaff-a,
Sing,
Fling,
Be merry as a king,
And sound a merry laugh-a.' "

They were now fairly launched in good-fellowship. Moke, blinking his eyes wisely, started in on an interminable story about a good dog he once owned, which had done some phenomenal things, forgetting a circumstances now and then, and harking back to begin all over again. At length, by common consent, the story was squelched. The gossip of the neighborhood was then freely discussed. It came at last to a time when the festivity must end. Each shook the good Cadi by the hand and assured him that he was the very best fellow on earth.

When his guests had gone, the good Cadi held the demijohn up to the light, peered into it seriously, and shook his head sadly, for it was empty, and his Christmas was thereby officially ended.

BERNARD WATERS.

IN NEW JERSEY.

Morfey defeats Doty.

The Morfey-Doty match was shot on Arthur Bunn's grounds, at Singac, N. J., Dec. 14, as per arrangement. It was for a purse of $200, 100 birds each, 30yds. rise. A stiff west wind, which was blowing in the morning bracingly cold, gradually decreased in force till at noon it blew gently, but steadily straight away from the score, and, mild as it was, materially assisted the flights of the birds. The latter were a very good lot, nearly all flying well when once on the wing.

Neither contestant shot in good form throughout. Morfey was shooting in great form up to his 20th bird, putting in both barrels in excellent time and with admirable precision, each charge centering the bird well. His 6th was a very fast straightaway, which was an excusable miss. After the 19th bird he seemed to lose his time for a while, missing four in the next six, and was well along to the half-way number before he caught his time again. Doty's second barrel came into good play a number of times after missing with the first, in the 25, but while it was spectacular, it was not good shooting. The luck of the birds as a whole was in Doty's favor, particularly in the first part of the race. At the end of the first 25 the score was 22 to 20 in favor of Doty. They tied on 40 on the 50th, Doty killing but 18 out of the second 25, and Morfey again killing 20. Each had missed several birds which were not difficult. Morfey's third 25 was his best, he killing 23, though the birds were something easier than in the forepart of the race. Doty also scored 23. At the end of the 75th round they were tied on 63. Morfey missed the first bird of his last 25 and lost the 79th dead out, so that Doty was then two birds in the lead. It looked like the latter's race, but he lost his 82d and 85th, so that they were tied again on the 85th round. Morfey missed his 86th, giving Doty a chance to regain the lead, but the latter also missed and the race was still a tie. Doty missed his 88th, which gave the lead to Morfey, who held it to the finish, Doty missing his 90th, 93d and 97th, Morfey missing his 98th and 99th, though he had the race then well in hand.

Doty shot a game race, considering that his middle finger was badly gouged and pounded by the recoil of his gun, and hurt him exceedingly toward the last of the race. While having the essentials of a good shot, he is badly handicapped by a strained position when ready to shoot.

There was an enthusiastic crowd present. Many of them, in their eagerness, crowded too close to the front, much to the annoyance of the principals, and to the obstruction of the puller, so much so as to draw forth a complaint from Mr. Morfey while the last 25 birds were being shot that in some instances the trap was not pulled promptly when he called pull.

There were a number of sitters during the race, most of which were from No. 5 trap. Morfey's no birds were the 9th, 14th, 20th, 25th, 27th twice, 39th, 74th, 83d twice, 85th, 95th, 96th, and 99th. Doty's no birds were his 27th, 47th, 51st, and 66th. Morfey was prompt in calling no bird if it did not fly promptly, while Doty waited on a number to take wing. Morfey's longest run was 16; Doty's 17. Doty shot 3¾drs. of E. C. in a Parker gun. Morfey used his new Francotte, and shot 3½drs. of Schultze. Both used U. M. C. shells.

Mr. W. Fred Quimby was referee.

The match began at 12:45 and ended at 3:08. Hurlingham rules governed.

Morfey defeats Rothacker.

Yardville, N. J., Dec. 15.—The 100-bird match between Morfey and Rothacker, shot here to-day, was favored with fine weather. There was no wind, which was against good flights of the birds, the latter, however, being only a fair lot, with some good ones. Morfey killed 23 out of each 25, scoring thus 92 out of 100. Rothacker killed 21 of his first 25, 23 of his second, 19 of his third, 17 of his fourth. Morfey used a Francotte gun, 3½drs. of Schultze in Trap shells, 1¼oz. of 7s, factory load. Rothacker used 3½drs. of Schultze, 1¼oz. of 6s and 7s, Leader and Smokeless shells, in a Colt gun. The match began at 1:30 and ended at 3:11 P. M.

Boiling Springs Gun Club.

Rutherford, N. J., Dec. 17.—There was a good attendance at the first match of the series between the Boiling Springs Gun Club and the Passaic City Gun Club, of Passaic, N. J. Neither club, however, had its strongest team, though the low scores were in a measure due in part to the execrable weather. There was a light fog, the sky was a solid mass of dark clouds, and there was a drizzling rain, while the match was in progress. About 3 o'clock the match began. Each contestant shot at 25 targets, Sergeant system. The greatest good fellowship prevailed. A few sweepstakes were shot before and after the main event. Boiling Springs won by a score of 159 to 141. Following are the scores:

Boiling Springs Gun Club.

Hudson Gun Club.

Jersey City, Dec. 17.—The last shoot for the year 1898 of the Hudson Gun Club, of Marion, N. J., was held to-day. There was a fair attendance of members, as the day was perfect.

From an exciting point of view the match race between Charles Banta and Schorty might be considered the main event of the day. The champion of New Jersey was in poor form, and Mr. Banta won by the close score of 70 to 71.

The match was for $10 a side, and as Banta has won two out of three, Schorty demanded satisfaction, which he will get in some shape or other at the next shoot of the club.

Mr. Van Dyne won the cup given by the club for the most points made during the year. The winner is a popular member of the club and everybody seemed satisfied. The points made by each member for the cup are as follows: Van Dyne 30, Whitley 26, Shields 26, Schorty 23, De Long 22, O'Brien 20, Bock 19, Tommy 18, E. Heritage 18, Altz 13, Kelly 12, Johns 12, Banta 12, Nagle 12, Brewster 12, Wright 14, Ratigan 7, Goetz 6, Boothroyd 6, Wildes 6, and McElroy 6. Schorty contributed a second prize—a box of fine cigars—which was won by Mr. Schields. Summary:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	25	15	15	10	10	*	Targets:	10	25	15	15	10	10	*

* 100 targets.

Interstate Association Meeting.

A MEETING of the Association was held in the rooms of the Sportsmen's Association, Stewart Building, 280 Broadway, New York, on Monday evening of this week.

The members were represented as follows: Winchester Repeating Arms Co., Irby Bennett; Parker Bros., W. F. Parker; Hazard and Du Pont companies, Edward S. Lentilhon; Laflin & Rand Powder Co., A. W. Higgins; U. M. C. Co., J. A. H. Dressel; E. C. & Schultze Powder Co., Edward Banks; and by proxy, Tatham Bros., Leroy Shot and Lead Works, and Cleveland Target Co. The reports of previous meetings were read, approved and adopted. The Remington Arms Co. was admitted to membership. Applications for target tournaments were received from clubs at Bellows Falls, Vt.; Providence, R. I.; Oil City, Pa.; Salem, N. Y.; Austerlitz, Ky.; Warm Springs, Ga.; Scranton, Pa.; and Portland, Me., all of which were referred to the tournament committee. The restrictions governing paid representatives at all the Association's tournaments, other than the Grand American Handicap, were re-enacted. It was carried that after the Grand American Handicap of 1899 the members of the Association would donate no extra prizes. There was nothing received in respect to the petition of Mr. E. D. Fulford, in the matter of class shooting, other than his personal letter. It was carried that the Association give not over five target tournaments, the selection of which be left to the judgment of the manager.

It was carried that the system for division of the moneys at the Grand American Handicap shall be high guns, arranged for division up to 260 entries, three moneys for each ten entries over the guarantee of $1,500 for the three high guns, all surplus over the 260 entries, that is, over $6,500, to be divided equally among the sixty-three guns.

Officers were elected as follows: President, J. A. H. Dressel, of the U. M. C. Co.; Vice-President, Irby Bennett, of the Winchester Repeating Arms Co.; Secretary-Treasurer, Edward Banks, of the American E. C. & Schultze Powder Co. Directors: J. A. H. Dressel, Irby Bennett, W. F. Parker, of Parker Bros.; John A. Lequin, of the Hazard Powder Co.; A. W. Higgins, of the Laflin & Rand Powder Co., and Edward S. Lentilhon, of the Du Pont Powder Co.

Executive Committee: Messrs. Lequin, chairman; Higgins and Parker.

Tournament Committee: Messrs. Bennett, Higgins, Lentilhon, Parker and Dressel.

Organization Committee: Messrs. O. D. Delano, Paul North, Chas. Tatham.

Committee on Rules: Messrs. Shaner, Banks, Bennett, Parker, Ed Taylor and Capt. Money.

Capt. Dressel is ex-officio a member of all committees.

Mr. Elmer E. Shaner was re-elected manager.

In the early part of the proceedings the chairman, Mr. J. A. H. Dressel, after the manager's report, called the attention of the members to the long, faithful and efficient services of the manager, the growth of the Association, from its beginning to its at present highest success, of the esteem in which he was held, and many more pleasing, yet merited, praising, and on behalf of the Association presented him with an elegant solid gold watch and chain, valued in the hundreds.

Mr. Lequin, the secretary, was ill and could not be present.

Eureka Gun Club.

The Eureka Gun Club, of Chicago, held its regular bi-monthly trophy contest at Watson's Park, Dec. 17, at 1 o'clock. The day was pleasant and cool, but the strong sun made it very comfortable. The wind blew hard from the right quarter, slightly incoming, which made the birds screamers and hard to stop. Many good clever kills were made during the afternoon. Several shooters took part in the club contest as visitors, and made a sweep of $5, two moneys. Among them were E. A. Leach, L. T. Crisman, Dick Dwyer, C. E. Comley, Dr. W. B. Kibbey and H. E. Wiley. Dwyer won first alone, and Willard, Bingham, Comley and Kibbey divided second.

Following are detailed scores of the contest, at 15 live birds, with handicap of distance, resulting in Bingham, Willard and Airey tieing:

E Bingham, 32	2022222122222211—14
F H Hollister, 30	222220022121222—13
A C Paterson, 32	2212*12220020*1—10

John Watson's Warm Week.

Elliott—Gilbert for Review Cup.

CHICAGO, Ill., Dec. 12.—The live-bird festivities at John Watson's famous park were inaugurated this morning by the race between Gilbert and Elliott for the Sportsmen's Review cup, won by the latter at Cincinnati. The race began at 11 o'clock, under rather disappointing conditions. It was expected that the weather would be cold and windy, and that the birds would be very smart. Upon the contrary, the day was cloudy and absolutely still, no perceptible wind deflecting the smoke columns which rose about the park. The light was dull and bad, and snow fell during the great part of the race. In the second quarter of the race the snow was fine and light, but in the third quarter it came down in big, soft flakes, and the ground was covered with a skim of white, though at the finish of the race the snow had nearly stopped. The birds, under these conditions, were confused and very dull, and hardly a dozen fast ones went out. Neither Elliott nor Gilbert ever had a better chance to kill 100 straight, and before the race it was predicted that 98 would be seen, for there has been no such opportunity for high scores in any big winter race here since the Carver-Grimm race for the cast iron badge, which was shot in even a worse snowstorm than this. As it was, Elliott defeated Gilbert in very hollow fashion, the latter doing unaccountably bad work in the first half of his race, missing 3 out of his first 10 birds. Elliott shot a pretty race, and until well past the 75 hole it was predicted that he would score 98. His last string of 25, however, showed three gaps, and he retired with 96. Most of the birds lost were fast ones, which sprang after a long run of dull ones. I have never seen so many birds flagged in any race at this set of traps. Elliott had 5 birds flagged, and Gilbert exactly the same number that required starting. Most of the birds were killed very close to the traps, and I presume that a shorter string of retrieving has never been seen in any race on these grounds. The best proof of this was the time required in running off the race, which was only one hour and twenty-five minutes, from five to eight minutes inside the average fast time of these two men.

Elliott got past his first bird in this match, and started out in slashing style. He led Gilbert 2 birds at the 9 hole, where he lost an outgoer, which fell at the fence. Not to be outdone, Gilbert repeated Elliott's performance, the bird taking identically the same flight. It was conceded at the 10 hole that Elliott had the race in hand, and this was confirmed when he killed 30 straight, leading Gilbert 4 birds at the half-way point. He then ran 39 straight, and was looked on as safe for a big score. Well along in the race Gilbert seemed to catch his second wind and killed his third string of 25 straight. He, however, lost 2 birds in his last string, Jim going him one better by losing 3. The best that Fred could show was 92 to Jim's 95. I do not think detailed description of the birds necessary, as the flying was not of extraordinary quality. The long runs of trap kills made the race more monotonous than usual. The birds lost were usually quicker starters, though Gilbert lost two birds on which he had all the time in the world, his first missed being on a flopping incomer, which curved and came in. Elliott shot a Winchester pump, 45grs. Hazard, Leader shells. Gilbert shot an L. C. Smith, Du Pont powder, Leader shells. The following are the scores:

Winter Sweeps.

There were a good many of the intending tournament contestants present at the Elliott-Gilbert shoot, among others Mr. Emil Werk, of the Sportsmen's Review, Cincinnati; J. J. Hallowell, Harvey McMurchy, C. W. Budd and W. R. Milner, Des Moines; Dr. Kibby, Marshalltown, Ia.; Burt Low, Mason City, Ia.; Charles Grimm, Clear Lake, Ia.; Thomas Laflin, Mr. and Mrs. Eberhorn, Mr. and Mrs. S. R. Porter, W. H. Cropper, George Summerson and Mr. Owens, Rock Island, Ill.; George Deiter, Milwaukee; Otto C. Ely, Wheaton, Ill.; T. J. Fortier, Fortier, Ill.; H. M. Miner, Guthrie, Ill.; Fred McKay and wife, Minneapolis; E. A. Leach, Tripp, S. D.; B. L. Rudd, Cassopolis, Mich.; Thomas Marshall, Keithsburg, Ill.; Harry E. Lee, Hutchinson, Kas.; Jack Fanning, Batavia, N. Y.; E. H. Tripp, Indianapolis.

During the afternoon several little sweeps were made up among the above talent, with the following results:

No. 1, 10 live birds, $5: G. L. Deiter 8, H. McMurchy 10, B. Long 7, C. W. Budd 9, W. R. Milner 7, T. Marshall 10, Fanning 10, Hallowell 9, L. Goodrich 9, G. Roll 10, McKay 9, Gilbert 9, Bingham 9, J. A. R. Elliott 10.

No. 2, 10 birds, $5: Bingham 9, Deiter 9, Hallowell 10, Marshall 10, Gilbert 10, McKay 7, Fanning 7, McMurchy 10, G. Roll 10, Elliott 10, Budd 9, Tripp 5, Long 9, Milner 10, Hollister 9.

No. 3, miss-and-out, entrance $3:

Gilbert	22110	McMurchy	21221221
Marshall	20	Bingham	12222120
Hallowell	22222222	Fanning	21221222
McKay	21120	Budd	212220
G Roll	2220	Hollister	12111212
Leach	20	Milner	21211222

No. 4, 10 birds, $5:

Marshall	1222022222—9	Gilbert	1101111222—9
Roll	1220222122—9	Budd	2021111112—9
Dieter	2112202222—9	Hallowell	0111222222—9
Long	1021022102—7	McMurchy	1212222212—10
Elliott	2210222122—9	Hyde	2210222222—9
Fanning	2111212222—10	Milner	1212222102—9

Watson's Live Bird Tournament, First Day.

Tuesday morning, Dec. 13, the opening day of John Watson's big winter live-bird shoot, dawned cold and clear, with a stiff wind, which made work at the scores not only difficult, but uncomfortable. The boys were obliged to keep indoors when not under the thumb of the referee and pullers. It was like old times to meet the "gang" thus assembled. All the old-timers were on hand, and a number of the newer lights. Heikes, Elliott, Budd, Fanning, Marshall, Gilbert, Grimm, Hallowell and others of the old guard were there, of course. Mr. J. O'H. Denny, of Pittsburg, shooting under the name of James, did very nice work. Dering, of Columbus, Wis., comparatively a young one in the game, made a very nice showing. Tom Laflin, of Rock Island, was here of course. E. E. Baker, mayor of Kewanee, and promoter of the shoot at Kewanee next week, was doing business with varying success. John Lane and Dr. Kibby, of Marshalltown, Ia., took part, and so did Long, of Davenport, and Milner, of Des Moines. Mr. John G. Smith, of Algona, Ia., was present as a spectator during the day. A new face was that of George Aggard, of Goldfield, Ia. The Chicago contingent was a fair one, including Comley, Roll, Dicks, Palmer, Shaw, Simonetti, Von Lengerke, Amberg, Barto, Levi, Lem Willard, etc., etc.

There were two sets of live-bird traps, and both were kept busy, it being the plan to shoot 5 birds at one set and then go to the other. I watched the shooting for some time at the right-hand set of traps and found that the shooters pronounced it less satisfactory than at the No. 1 set, no less than 5 birds being flagged in succession, and there being a large number of birds which hesitated for a moment before taking flight. This is unusual on these grounds, whether due to the birds or to the traps, I cannot say.

For the most part, the birds were good enough to puzzle any of the cracks, as may be seen by the scores. McMurchy was suffering from neuralgic pains in the eyes, and hardly felt as himself. Jack Fanning received some guying from his friends for having missed 5 birds out of 10, and endangering the success of his team in a little champagne supper project which is on foot. Ten of the cracks paired off into two-men teams, and will compare averages at the end of the week, the lowest to be penalized to the extent of the aforesaid supper.

Nothing of special interest turned us in the sweeps, unless it might be said of the daily equitable sweep of 15 live birds, $10. This brought the fine entry of forty-two, and the division of moneys was received with commendation by the shooters interested. Fanning, Budd, McKay, Willard, Roll, Dicks, and Von Lengerke were the only ones straight. Second money fell to Heikes, Grimm, Leach, Long, Deiter, Dering and Laflin. Out of the entire forty-two entries there were only ten men who failed to get into the money. Obviously this does not leave very much opportunity for wolfing, but in this jolly lot of contestants everybody seemed happy. If my memory serves me correctly, there are more Chicago shooters taking part in this tournament than have ever come out to a similar one here before, where the events were wide open for all the experts. There has been a little revival in live-bird shooting here since the establishment of the Montgomery Ward badge shoots, and the cut rate on Watson's rolling stock. All in all, I think the visitors should not complain at the Chicago contribution, and it is certain that the Chicago shooters have no reason to complain of the visitors, who number among them the best of the Western shots and the jolliest of mortals. Most of the "gang" is stopping at the Leland Hotel, and the scene there during the evening is one, to use the expression of the novelist, which beggars description. Some of the boys will go to Mr. Baker's Kewanee shoot early next week, and others will go to Indianapolis, while a few will divide time on these conflicting dates. The following are the scores of the day:

Event No. 1, 7 birds, $6, two moneys:

Milner	0211212—6	Hallowell	1121101—6
Heikes	2222212—7	Rice	1122021—6
Fanning	2222212—7	Frost	2210220—5
Bingham	2122211—7	Short	1110220—5
Marshall	2122202—6	Kibbey	2201222—6
Gilbert	2221221—7	Terry	0202000—2
Budd	2211112—7	Irwin	0212002—4
McKay	1211120—6	McMurchy	2210122—6
Grimm	1222202—6	Dering	2121102—6
Elliott	2212022—6	Agard	0012211—5
Lee	1000111—4	Long	2212022—6
James	0022200—3	Roll	2122112—7
Baker	2222201—6	Dieter	2122222—7

Event No. 2, 10 live birds, $7, three moneys:

Milner	0110202221—7	Cropper	1221201212—9
Heikes	2221222212—10	Laflin	1110111111—9
Fanning	0002211002—5	Kibbey	2222211222—10
Bingham	0121122222—9	Minor	0001122222—7
Marshall	2222222222—10	Comley	0111111111—9
Gilbert	2222222212—10	Frost	2001222201—7
Budd	2221111222—10	Fortier	2101021022—7
McKay	1202011122—8	Roll	2212202102—8
Grimm	2222221222—10	Dieter	2222222202—9
Elliott	2222221111—10	Dering	2211122222—10
Lee	1111111101—9	Long	0120221111—8
James	2102021202—7	Agard	1210011122—8
Baker	0122202101—7	Porto	2202020212—7
Hallowell	2222222022—9	McMurchy	1221211220—9
Rice	2202012202—7	Leach	2222212220—9
Whitney	2022201012—7	Willard	2222202212—9
Sherry	1221211211—10	Moy	1122100121—8
Porter	2111222212—10	Short	1021100260—5
Ehrhorn	2220222022—8	Simonth	2201020002—5
Somerson	2122010012—7	Levi	1001101121—7

Daily equitable, 15 live birds, $10, four moneys, equitable system of division:

Milner	221010100211111—11	Porter	1220221012022212—12
Heikes	2202122222222—14	Sperry	1212102121212012—13
Fanning	2222222212222222—15	Ehrhorn	0222022011120020—10
Bingham	1111011111111102—13	Somerson	1002001002121102—8
Marshall	2021222212122211—14	Cropper	0011202211222211—12
Gilbert	2021220211122212—13	Comley	1002122021111112—13
Budd	2121112122111111—15	Roll	2222222222212112—15
McKay	2222222212212112—15	Dicks	2211222222112212—15
Grimm	2222222212102222—14	Dering	1111202121212222—14
Elliott	2221222122200122—13	Minor	1020211221210211—12
Lee	1020112020121211—11	Fortier	1222022211112212—13
James	2022020202222220—10	Laflin	2121101121122212—14
Baker	1022122202122222—12	Agard	2112222121212020—13
Hallowell	0221221122021222—13	Shaw	0222122202222220—12
Rice	1120111112222210—13	Lane	0001202211011222—10
Leach	2212220222222222—14	Palmer	2100022000112012—8
Barto	2200102021112122—10	Simoneth	2222210010000200—7
Long	2222120222222222—14	Von Lengerke	2222222222222222—15
Dieter	2220212222222222—14	Amberg	2021102211021012—11
Willard	2222222221121222—15	White	2122200111022220—11
Kibbey	2022220011211122—12	Levi	0120100121211120—10

Extra, 10 birds, $7:

Bingham	1222211202—9	Roll	2222222222—10
McKay	2111122120—9	Heikes	2222222222—10
Grimm	2222221212—10	Budd	0122211112—9
Hallowell	2220222221—9	James	1220222222—9
Fanning	2202212112—9	Leach	2122222222—10
Milner	0222221222—9	Rice	0222222121—9
Long	2111111222—10	Sperry	1021121100—7
Comley	2121111020—8	Baker	0022222200—6
Palmer	0220102020—5	Willard	1112111112—10
Ehrhorn	0010100221—5	Lane	1220220022—7
Porter	1222110220—8	Gilbert	2212222212—10
Marshall	0222022222—8		

Darkness prevented Cropper and Dering from finishing their scores in the last event, they withdrawing.

Second Day, Wednesday, Dec. 14.

The weather continued unpleasantly cold, and a stiff wind made the shooting interesting enough for the best of them. None the less, a goodly number of straights turned out, and it was easy to be seen that the boys were getting on their nerve in good shape. In the main event of the day Elliott, Barto, McMurchy, A. Kleinman and Von Lengerke went straight. McMurchy was easily high gun of the day, for he made a clean score in each of the three events, killing his 32 birds straight under conditions which were by no means easy. There were forty-five entries in the Equitable event, and this is a very good showing in so expensive a game as a live-bird tournament. Both sets of traps were busy all day. One of the surprises was Jack Fanning's losing 4 birds in the 15-bird event, though he hauled out straight in the other two sweeps. Heikes and Gilbert both got into the second flight in the big sweep. Many shooters met hard luck with birds dead out of bounds, as the strong wind from the right quarter frequently carried the dead bird over the wire. The programme was the same as on the day previous, and the following are the scores:

Event No. 1: Gilbert 7, McKay 7, Budd 5, Hallowell 6, Marshall 6, Grimm 6, Fanning 7, Heikes 7, Milner 7, Bingham 7, Elliott 6, James 6, Crisman 5, Leach 6, Baker 5, Rice 6, Long 5, McMurchy 7, Laflin 6, Barto 6, Comley 6, Werk 3, Agard 7, Kibby 5, Lee 5, Sperry 6, Deiter 6, Sconce 4, Minor 5, Porter 7, Murchey 5, Fortier 5, Cropper 4, Kleinman 6, Ruble 6, Ehrhorn 6, Somerson 6, Lance 4, Dr. Carson 5, Dr. Miller 6.

Event No. 2: Gilbert 9, McKay 8, Budd 9, Hallowell 7, Marshall 8, Grimm 7, Fanning 10, Heikes 9, Milner 8, Bingham 7, Elliott 9, James 7, Crisman 7, Leach 9, Baker 4, Rice 6, Long 9, Werk 3, Kibby 7, Lee 8, Barto 9, Sconce 9, McMurchey 10, Deiter 10, Sperry 7, Minor 9, Moy 6, Porter 10, Kleinman 10, Agard 8, Laflin 9, Carson 9, Miller 9, Willard 10, Ruble 9, Cropper 9, Fortier 7, Ehrhorn 6, Somerson 5, Hollister 9, Dicks 8, Hoyt 8, Dwyer 9, Wood 9.

The second event was at 7 birds, $5 entrance, two moneys. The score:

Daly Equitable:

Gilbert	2221221221122220—14	Deiter	2222221202022202—12
McKay	2220211220200002—10	McMurchy	2212122221111111—15
Budd	1002222211111221—13	Dr Shaw	2222220222222222—14
Hallowell	1020102210022222—10	Miner	1122201010111112—12

Comley	02001200w	Dr Carson	1112121021122222—14
Lee	2122022112022012—12	Fortier	11102020210w
Willard	2212021122202222—13	Little	1220122221201220—12
Barto	2121122212222112—15		

Thursday, Third Day, Dec. 15.

The weather was much warmer and more pleasant, but the wind still kept fresh and the birds gave a sample of what they could do. In the big event, the daily equitable, only five straights came out from an entry of forty-five men. Fourteen landed one bird back of first, and looked enviously over the line at Gilbert, McKay, Tom Marshall, Bingham and Lem Willard, who were the 15 men. Budd, Fanning, Heikes, Hallowell, Elliott, Grimm and others of the cracks were variously scattered over the landscape in the scores. McMurchy continued his good work of the day previous, and only missed two birds during the day, thus scoring 62 out of 64 shot at during the two days. Budd, Fanning and others tied the record of only two birds missed to-day. The shooting averaged of very high class.

The tournament was easily seen to be a great success, much better than Mr. Watson had expected. The entry held up wonderfully well, and for those who had wearied others came instead, among these Geo. Mosher, of the Syracuse Arms Co.; Dr. Miller, Sconce, Paddock, Cropper, Nance, Muchey, Geo. Thorne, W. B. Leffingwell and Beveridge, etc., etc., so that the ranks were more than full, the local men making a very good showing.

The equitable experiment proved itself a popular success, and I think perhaps aided in holding up the entry in the main daily shoot. I have never seen this system tried where it did not give satisfaction at a mixed shoot, and I think it gave satisfaction here, though naturally the top men did not get very rich where 13 paid more than entry, and 12 kept a man encouraged to go in again at the next sweep. John Watson has offered the public three pretty steep 15-bird sweeps in the three equitables this week; indeed the largest live-bird sweeps to appear for a long time this season, and perhaps the most satisfactory.

The arrangements at the grounds were most excellent in every way. The shooters did their best to eat the park out of house and home, but could not do it. The retrieving was like clockwork, the large numbers of well-broken dogs making it very rapid. The birds were good, and the cash kept to the nail and to the dot. The arrangements for the newspaper boys were the best that could be asked, and the newspaper man who would not give this shoot a good send-off either does not know a good shoot when sees it or can't get space to tell all he wants to say. This is the biggest success of any of the live-bird shoots John Watson has ever held. Following are the scores of the day:

No. 1, 7 birds, entrance $5, two moneys, 60 and 40 per cent.:

Gilbert	2222102—6	Minor	2122200—5
McKay	2002202—4	Wood	1211121—7
Budd	2121112—7	Dr Kibbey	1110012—5
Hallowell	0211222—6	Grimm	0221122—6
Marshall	2210122—6	Dieter	2222222—7
Elliott	2022012—5	Sconce	2212220—6
Fanning	2111220—6	Dr Miller	1212222—7
Heikes	2222201—6	Paddock	1222112—7
Milner	1022102—5	Laflin	2012222—6
Crisman	2222022—6	Leach	2020021—4
James	2221222—7	Whitney	1210002—4
Long	2112222—7	Nance	0101111—5
Lee	2101211—6	Agard	1110021—5
Mosher	0222222—6	Cropper	0212112—6
McMurchy	1111122—7		

No. 2, 10 birds, entrance $7, three moneys, 50, 30 and 20.:

Gilbert	2122022222—9	Dr Miller	2210211100—7
McKay	0222002222—7	Dieter	2212221221—10
Budd	2222222212—10	Bingham	2211110210—8
Hallowell	2112012220—8	Whitney	1221121222—10
Marshall	2220000022—5	Agard	1110220201—7
Elliott	1222221221—10	Nance	1100111112—8
Fanning	2012202202—7	Wood	0100010101—4
Heikes	2120122120—8	Paddock	2222222222—10
Milner	0201122200—6	Muchey	2022222002—7
Crisman	0222222202—8	Lane	2220222002—7
James	2022022202—7	Laflin	1122102012—8
Long	0122121111—9	Beveridge	1221220002—7
Lee	0210121001—6	Hyde	2202002220—6
Mosher	2222201210—8	Somerson	202200w
McMurchy	1221111220—9	Cropper	1212212120—9
Dr Kibbey	2121010111—8	Tramp Irwin	1201222202—8
Grimm	2220222222—9	Willard	2112222220—9
Sconce	2212021122—9	Moy	1010101021—6
Leach	2222211222—10	Ruble	2222211021—9

No. 3, 15 birds, equitable system, four moneys:

Gilbert	2222121212222—15	Dr Miller	1102011101201l0—10

Friday, Last Day, Dec. 16.

The weather continued all that could be asked, the temperature much higher and the sport more enjoyable on that account. The wind, however, was strong from right to left, across the score, and the day was a grand one for the birds, which never flew better. A great many shooters from out of town said that they had never seen birds fly so in all their lives. A look at the scores will show the truth of this. Had the old park never before had a reputation, it would have made one to-day, and John Watson was happy. So was everybody else, so far as the fun was concerned, but a good many were not exuberant when they came to look at the card over the cashier's desk, where George Watson and Ike Watson wrote down unspeakable things by way of figures.

This was to be the grand day of the tournament, the one for the Watson's Park live-bird trophy, which came pretty near turning out a Grand American Handicap by itself, since it brought out the unexpectedly large entry of fifty-nine shooters, and ended the tournament in a blaze of glory. It was the redhottest race that ever you did see, and it kept everybody guessing till dark. Indeed, it was not finished even at dark, for nine men were forced to carry their last six birds over till Saturday morning, though there remained enough light to establish the winner of the badge.

It was anybody's race, and there were a dozen favorites in popular choice. It never occurred to any one that there would only be one straight made out of fifty-nine shooters, and such shooters as these were. It was supposed that at least half a dozen of the strong finishers would pull themselves together and come under the wire bunched. They were bunched, and they came under the wire, but they came too late.

Long, of Davenport; James, of Pittsburgh; 333, of Buffalo; Lane, of Marshalltown; Paddock, Porter, Cropper, of Rock Island; Sconce, of Sidell; Simpson, of Sycamore; Crandell, of Belvidere; Crisman, of Ottumwa; Milner, of Des Moines; and others whose names are less familiar here, were looked upon askance as furnishing a possible dark horse. Everybody was looking in all sorts of places for a dark horse, but it was generally admitted that with all the best live-bird shooters of the West present and the birds flying the way they were, it would be a mighty cold day for a dark horse. Yet the dark horse was there.

Not so dark either. Rather short and slight, nervous, positive, yet calm and collected, with an easy, erect, natural and unstrained position at the score; there were those who had long thought that a certain man in this event might be ugly to run against. His style in the first two frames of the sweep was perfection, easy, quick, accurate, with no flurry and no delay. He shot like a winner all the time, and had everybody kept in mind the long record of nervy contests he has shot out in Iowa, it might have been thought unwise to classify this man as a dark horse, even with so large and strong a company as the Iowa delegation.

The squads began at No. 2 set and shot 6 birds, then shot 7

birds at No. 1, 6 at No. 2, and finished with 6 at No. 1, in front of the club house and stand. One by one the favorites fell. Heikes lasted to the 16th bird and went out with 23. Eddie Bingham killed every bird he shot at and some screechers, but he lost his 19th over the wire. Elliott lost 3. Sturdevant, the last winner of the Montgomery Ward badge here, shot a great race and killed 24. Fanning lost his 5th bird, then killed on out in great shape, stopping some rattling birds along in the evening when he came to finish. I then saw him sitting on the rail with some friends, watching the birds that the rest were getting. "Look at 'em go," he said. "Look at 'em!" And along about 4 o'clock they were going, too. Tom Laflin, the one-barrel man, lost his first bird, but went out with 22. Gilbert hung on till his 15th, but had to see his score broken there, and retired with only 23, which was a good many to-day. McKay also hung on well, but had to sit down with 21. Charlie Budd lost his 2d bird, and then later dropped three others, getting 21, though killing some that had full license to escape. Tom Marshall could only go him one better. McMurchy and Dick Dwyer lasted it out and got 23, and so did Wright, of Dayton, and Cropper, of Rock Island. Lee, the Alaska big-game hunter, scored 22 hard ones, though bothered with his gun, and he was tied with such good ones as Harry Dunnell, Abe Kleinman, Porter, of Rock Island; Ruble and George Deiter, the flincher from Milwaukee, who had been putting up a stiff gait all week. Lane, of Marshalltown, got out with 24 in elegant style, much to the pleasure of many who had seen him shooting in hard luck and falling back of place in earlier events. Yet Lane was seen to be out of first before the last frame came on.

At the end of the first rounds at No. 1 and No. 2 sets of traps there were still several men left who could possibly go straight. There was some talk of one Dr. Kibbey, from Marshalltown, who was still straight and shooting in great form. As matters progressed, the good ones and bad ones and middle class ones began to weed out; but still, if you asked anybody, he would say, "Oh, yes, Dr. Kibbey is still straight. He's from Marshalltown."

After a while the earlier entries began to fall back as they finished their scores. Dr. Kibbey was the fifth man to enter, and was therefore among the earliest to finish. It was observed that when he went in to the stove he had a large, glittering 25 opposite his name. "Dr. Kibbey—yes; he's from Marshalltown," they said. "So there's one straight, anyhow." That was what they said early in the afternoon.

Meantime the race went on steadily, and it was noticed that there were no more large, glittering 25s hung up over the desk. Indeed, it began to grow rapidly apparent that not very many more large, glittering 25s could possibly be hung up this year. There was Dr. Kibbey, of Marshalltown, he was straight. Cropper, a large, strong man from Rock Island, was yet a possibility. Tramp Irwin was still straight at the 19 hole. Charlie Grimm was still straight at the same place, and he was shooting a strong, confident gait, which made him look mightily like a 25 man. But there was no one who had really trotted all the way round and come out with 25 except Dr. Kibbey, of Marshalltown.

The matter stood as above when the 8th squad of six men was called to finish at No. 1 set of traps. The birds were now going like ghosts, for the wind was keen and the air apparently just right. There may be such a thing as that John Watson tapped a special brew of birds this afternoon, for he was noticed to be smiling in his whiskers, and at least it is certain that there was no complaint about the birds starting. The main trouble was over their stopping. A great many sprung sharply up, caught the wind under their right wings, turned over and slanted out to safety over the left-quartering boundary.

No. 8 squad was composed of Grimm, E. S. Rice, Cropper, Barto, Porter and Deiter, but Rice withdrew at the 13 hole after missing 6 birds, so only five men appeared to shoot. Barto, Porter and Deiter were already back of first, but Grimm and Cropper could make 25 if they could kill 6 straight. They both looked as though they could turn the trick. Cropper was shooting in good time and centering his birds, while the Clear Lake man was cool and quick, and it looked like a cinch for him to go straight. Cropper killed his first 3, and so did Grimm, but then Cropper met a bit of bad luck that broke his heart. He caught a little white bird about as big as a chew of tobacco, and it swung about and in, apparently unhit, and lit within a dozen feet of the trap. John Watson, referee, said, "That bird isn't hit at all." Yet just as they called for the "white dog" the bird was seen to topple and sink down as though about to die. The dog ran up cautiously, but as it got near the bird rose and went out. Cropper killed the following bird, but missed his last. Grimm killed clean, stopping some hard ones, till he came to his 24th bird. This one jumped high and fast, a strong blue bird, and it swung over to the left on a sharp curve. Charlie hit it well the first time and touched it up again with the second, but it went on out. This was hard luck, when the finish was so near and the company so select.

No. 9 squad had no possibles left in it, but just about dark the last squad to shoot, No. 10 squad, was called to No. 1 set to finish. Here was Tramp Irwin, who had killed 19 straight, and might run the other 6 if all went well. This squad was made up of Johnnie Lane, Harry Dunnell, Abe Kleinman, Levi, Tramp Irwin and Ruble, Levi having withdrawn earlier. Dunnell and Kleinman killed their first bird each, and it was up to Irwin, the only remaining possibility for a tie. Irwin leaned forward and called "pull," caught a twisting bird that went out a right-quarterer, and missed it with both barrels, or perhaps hit it lightly only with the first. The light was now poor and the birds still fast at times, though it was growing dark. With Irwin's lost bird, there went the only thing to hang a doubt on. The crowd went in search of Dr. W. B. Kibbey, of Marshalltown. They found him, a rather short, energetic looking man, wearing a brown hat, with his hands in his fur coat pockets and a cigar in his mouth. He modestly bore his honors, but expressed great pleasure when he saw the beautiful badge which Mr. Watson had designed for this year's annual trophy. The badge carried with it $147.50, and if Dr. Kibbey does not go back to Marshalltown, in the middle of the shooting State of Iowa, a very much contented man, then indeed is all in vain. Second purse and third purse netted $118 each; fourth $88.50; fifth and sixth, $59. Following are the scores:

Watson's Park live-bird trophy, 25 live birds, entrance $15, number of moneys dependent upon number of entries. Class shooting, handicaps 25 to 32yds.:

Ends.

The men who finished on Saturday morning were Moy, White, L. Willard, Agard, Nance, Hollister, Dicks, Palmer, Von Lengerke and Levi. Out of these, Lem Willard sustained his reputation by scoring 24, and Palmer went out with 23.

The beauties of class shooting are well shown in this live-bird shooting at Watson's this week. First money alone, naturally, was good, and netted $147.50. The 24 hole paid each man only $16.85, a long way back of $147. The 23 hole paid $11.80, and 22 only netted each man unfortunate enough to be there $6.80. The 21 men were glad to get off with $5.35 and keep their guns. On the other hand, the last place, 20 hole, had but four men in and paid $14.75. A great many of the old-timers thought this was poor distribution of fortune's favors, and declared that high guns is the only way to shoot live birds when a large number of good ones are on hand.

The top man of the week was McMurchy, the "steady" of the Smith gun, to whose good scores attention has been called above. Mac shot in some extra sweeps, though he missed one or two programme events. He shot at 144 birds in all during the week, and missed only 6, truly a phenomenal performance, for no such lot of birds has been shot at any tournament in this part of the country. The birds got better all the way through, and not worse.

Next to McMurchy was Gilbert, who missed 8 birds out of 121 shot at, the latter being the full programme number.

Charlie Budd played in rather hard luck in his shooting, for he missed only 11 birds. Yet he took down only about $93. The entrance for the week was $106. You can figure the profit after adding expenses—and isn't it cheap to travel in a Chicago shoot.

Fanning went off his stride a bit in one event, but gathered and lost only 15 birds, I believe, during the week. He didn't get rich. Indeed, I don't know of anybody who got rich.

By the way, while speaking of shooting men, what appears to be particularly wrong about the good old prairie State of Iowa these days? Gilbert, Budd and Grimm are all Iowa men. Dr. Kibbey is an Iowa man. Besides these four were Crisman, of Ottumwa; Johnnie Lane, of Marshalltown; Long, of Davenport; Agard, of Goldfield; Milner, of Des Moines; and one or two others who also hail from the corn belt.

The handicapping in the trophy event was done by John Watson and R. B. Organ, and it gave satisfaction so far as known. It goes without saying that John Watson refereed at No. 1 set. Ike did the work part of the time at No. 2. The whole machinery was very smooth-running.

One of the contestants in the trophy event was J. N. Shafter, of Sycamore, Ill. He is a brother of Gen. Shafter, of Santiago fame, and in person somewhat resembles the latter. Mr. Shafter is county treasurer of his county.

Loads and Guns.

Following were the loads and guns used by participants, for which thanks are due the park management:

Denny (James), Boss gun, Du Pont powder, Trap shell.
Hess (Hyde), Parker gun, Schultze powder, Smokeless shell.
Crisman, Parker gun, Hazard powder, Trap shell.
Long, Lefever gun, Du Pont powder, Trap shell.
Kibbey, Parker gun, Du Pont powder, Trap shell.
Heikes, Winchester repeater, Schultze powder, Leader shell.
Shaw, Greener gun, Du Pont powder, Leader shell.
Woodford, Winchester repeater gun, Schultze powder, Leader shell.
Dr. Morris, Smith gun, Schultze powder, Trap shell.
Leach, Cashmore gun, Du Pont powder, Leader shell.
Bingham, Cashmore gun, Du Pont powder, Trap shell.
Mosher, Syracuse gun, Du Pont powder, Trap shell.
Elliott, Winchester repeater gun, Hazard powder, Leader shell.
Werk, Richards gun, Du Pont powder, Trap shell.
Sturtevant, Ithaca gun, Du Pont powder, Leader shell.
O'Leary, Smith gun, Gold Dust powder, U. M. C. shell.
Fanning, Smith gun, Gold Dust powder, U. M. C. shell.
Reichert, Smith gun, Troisdorf powder, Trap shell.
Crandall, Hollenbeck gun, Troisdorf powder, Trap shell.
Simpson, Lefever gun, Du Pont powder, Leader shell.
Shafter, Smith gun, Schultze powder, Smokeless shell.
Sconce, Remington gun, Laflin & Rand powder, Leader shell.
Milner, Parker gun, Schultze powder, Smokeless shell.
Paddock, Scott gun, Schultze powder, Trap shell.
Laflin, Parker gun, Du Pont powder, Leader shell.
Gilbert, Smith gun, Du Pont powder, Leader shell.
McKay, Smith gun, Hazard powder, Trap shell.
Budd, Parker gun, Hazard powder, Trap shell.
Hallowell, Remington gun, Trap shell.
Marshall, Cashmore gun, Marshall load.
Dwyer, Greener gun, Schultze powder, Trap shell.
McMurchy, Smith gun, E. C. & Schultze powder, Trap and Leader shells.
Lee, Greener gun, Hazard powder, Leader shell.
Comley, Smith gun, Du Pont powder, Smokeless shell.
Houston, Smith gun, Du Pont powder, Leader shell.
Grimm, Smith gun, Du Pont powder, Trap shell.
Rice, Stannard gun, Du Pont and Hazard powder, Trap shell.
Cropper, Lefever gun, Du Pont powder, Leader shell.
Barto, Colt gun, Du Pont powder, Smokeless shell.
Porter, Parker gun, Du Pont powder, Leader shell.
Goodrich, Colt gun, Du Pont powder, Smokeless shell.
Wright, Francotte gun, Schultze powder, Leader shell.
Deiter, Cashmore gun, Du Pont powder, Leader shell.
Ehrhorn, Lefever gun, Du Pont powder, Leader shell.
Lane, Smith gun, Du Pont powder, Smokeless shell.
Dunnell, Parker gun, Du Pont powder, Leader shell.
Kleinman, Scott gun, Du Pont powder, Smokeless shell.
Levi, Smith gun, Du Pont powder, Smokeless shell.
Irwin, Baker gun, L. & F. powder, Leader shell.
Ruble, Lefever gun, Dead Shot powder, Trap shell.
Moy, Cashmore gun, Du Pont powder, Leader shell.
White, Greener gun, Schultze powder, Smokeless shell.
Willard, Greener gun, Du Pont powder, Leader shell.
Agard, Parker gun, Du Pont powder, Leader shell.
Nance, Greener gun, E. C. powder, Smokeless and Trap shells
Hollester, Parker gun, Du Pont powder, Leader shells.
Dick, Colt gun, Du Pont powder, Leader shell.
Palmer, Greener gun, Du Pont powder, Leader shell.
Von Lengerke, Francotte gun, Schultze powder, Trap shell.
All used No. 7 shot. E. Hough

In the Matter of Flinching.

New York, Dec. 17.—*Editor Forest and Stream:* From time to time I have noticed in Forest and Stream articles on "fudging"; and having had a most distressing experience that way I herein relate it, hoping that some of your readers may derive benefit from it.

My trouble was that, being ready to fire, I pulled the trigger as I supposed, but in reality I did not do so—consequently I pitched forward the same as one would who had forgotten to put up the safety. For over a year, until the month past, I kept this up. After trying persistently the various methods advised as a sure remedy by my associates without avail, I was about to give up shooting entirely.

Finally it occurred to me that, while swinging my gun for my bird, having my gun firm against my shoulder, and gripped tightly with both hands, perhaps I might have unconsciously relaxed my grip, so that my finger was not in the close contact with the trigger when ready to fire that it was when I called pull; so as an experiment I put my gun lightly against my shoulder, letting it rest like a dead weight, gripping my gun just enough to steady it. As the target was released from the trap and far enough above me to see it, then and not until then did I grip my gun tightly with both hands, setting it firmly back against my shoulder, swinging back, pulling the trigger. To my delight, I found that then I did not fudge.

I have fired some 500 times since, and only fudged three times, and then I neglected doing what I should.

I realize that the causes of fudging are various, but I believe this worthy of a trial. If any one finds relief from these suggestions I shall feel that my disagreeable experience has not been without its benefit to some one. Ex. C. F.

Three hundred pigeons are in stock for Christmas, Dec. 26, practice at Donnelly's College Point, L. I., commencing at 1 o'clock.

ON LONG ISLAND.

New Utrecht Gun Club.

Woodlawn, L. I., Dec. 10.—Poor birds. The shooting of Thompson and Hegeman characterized the bi-monthly live-bird shoot of the New Utrecht Gun Club at Woodlawn this afternoon. The wind blew half a gale, and once the birds were on the wing they went, and the shot had to travel fast to catch them.

No. 1 was the club shoot:

F Thompson, A, 28.2112222121—10
A Hegeman, B, 29.211*122122—10
E Frost, B, 28.....120002221*— 6

No. 2, 500-shell shoot, 3 birds, then miss-and-out:

J Gaughen, 28 .....12112—5
E G Frost, 29 .....12220—4
F A Thompson, 29.....*22 —2
A A Hegeman, 30.....102 —2
S B Toplitz, 28.....200 —1

No. 3, sweep, 5 birds:

F A Thompson .....12120—4
S B Toplitz .....12221—5
E G Frost .....22220—4
J Gaughen .....2*122—4
A A Hegeman 01w

No. 4, sweep, 5 birds:

F A Thompson .....12221—5

Messrs. John A. Penn, M. F. Lindsley and Fred Dreihs, appointed to draft rules and conditions to govern the contest for the handsome silver trophy, donated to the Cincinnati Gun Club by Messrs. Col. Julius and Max Fleischmann and W. W. Peabody, Jr., under date of Dec. 5, report the terms and conditions under which the same shall be contested for as follows, to wit:

"There shall be ten contests for this trophy, each contest to be at 15 live birds, open only to members of the Cincinnati Gun Club. Birds to be trapped at 15 cents each. The first contest shall take place Dec. 14, 1898, commencing at 1 P. M., subsequent contests to be held at the same hour on the second Wednesday in each month thereafter during the year 1899, except July and August; the last contest to be held on the second Wednesday in November, 1899. Contestants must shoot in at least seven out of the ten races to qualify for this trophy. The contestant having the highest average in seven of his best scores out of the ten contests shall be declared the absolute winner of the trophy. Ties shall be shot off at 25 birds. The committee will impose a handicap on all contestants, ranging from 25 to 32yds., and at the end of the first five contests will, if deemed advisable in their judgment, to equalize shooters, change any or all handicaps. The latest American Shooting Association rules as revised by C. W. Dimmick in 1898, shall govern. The committee will appoint a referee on the ground at the time of each shoot. Individual handicaps will be announced when shooters step to the score in the first contest."

Arthur Gambell, Supt. C. G. C.

Fulford Challenges Heikes.

New York, Dec. 17.—*Editor Forest and Stream:* I have to-day received from Mr. E. D. Fulford, of Utica, N. Y., a challenge addressed to Mr. R. O. Heikes for the E. C. cup and the world's championship at inanimate targets. Mr. Fulford's challenge was accompanied by a check for $50, being the amount in full to be posted against the cup.

The challenge has been forwarded to Mr. Heikes, at Indianapolis, Ind., and it is hoped that he will see his way to shoot the match during his visit to the East next month, selecting some ground either in New York or Philadelphia as the scene of the contest.

It will be remembered that at the Heikes shoot last October, when the championship was contested for in open competition, Fulford and McMurchy tied for second place, Heikes being first, 7 targets to the good out of 300 shot at. Fulford was, I believe, second for the trophy and championship at the open contest for the same honors at the E. C. tournament at Guttenburg, N. J., in 1896, when Gilbert won first place.

The conditions of the race are 50 targets, unknown angles; 50 targets, expert rules, and 25 pairs.

Edward Banks,
Sec'y American E. C. & Schultze Gunpowder Company.

PRIZES FOR AMATEUR PHOTOGRAPHS.

The Forest and Stream offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to Forest and Stream's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the Forest and Stream.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 31, 1898.

VOL. LI.—No. 27. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The Forest and Stream Platform Plank.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

OUR AMATEUR PHOTOGRAPHS.

WE print for the last time the announcement of prizes offered by the FOREST AND STREAM for amateur work with the camera.

Photographs should be submitted for competition by December 31st. Any mailed on that date and showing post-mark of December 31st will be eligible for competition.

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

All work must be original; that is to say, it must not have been submitted to any other competition nor have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

THE ADVANCE OF AN IDEA.

ALL serious students of efficient game protective systems, and there are many such to-day, should read very carefully the new law for Colorado, prepared by Mr. D. C. Beaman. A synopsis of the measure is printed in our game columns. It is a carefully considered and well matured act, on which Mr. Beaman tells us he has been engaged for several years. There is in it nothing fanciful or crude; each division and every section of the several divisions constitute an harmonious whole; and the text is in its entirety the most complete and effective statute we have ever had proposed to meet the exigencies of so many complex interests as are those concerned in the wise administration of Colorado's game and fish resources.

The provisions of the proposed measure are most suggestive in their demonstration that in this Rocky Mountain State at least the people's game and fish interests have taken their place along with the mining resources and others, as something which sound public polity will no longer consent to give over to happy-go-lucky squandering. Mr. Beaman presents the elk and the antelope and the deer and the trout as a public possession which is to be protected from the foolish, wanton and wasteful raids of citizens and aliens alike. The Beaman measure is, in short, the most advanced recognition and exposition we have yet had in America of the growing idea that the taking of public game is a privilege which must be restricted by the people who possess the game, and confined within the bounds of sound economy. We have here another of the rapidly multiplying signs of the times which mark the passing of the old order and the coming in of a new. The protection of fish and game is not now regarded, as formerly for the most part it was, to be class legislation for the benefit of a restricted element in the community; and the framing of the laws is not much longer to be left to the whim and caprice of notional gunners, actuated by their immediate and personal interests alone. As here in Colorado, as in the States represented at the convention of wardens in Chicago the other day, as in Maine and many another State, serious minded, public spirited and capable men are taking up the preparation of the statutes, are giving to it mature and laborious attention, and are at this ending of the century putting game and fish conservancy on a reasonable and secure basis.

Whether or not all the details of Mr. Beaman's projected statute shall be approved at Denver this winter, he has in this elaborating of a strong and consistent measure given us a form of fish and game law which will mark an epoch in the development of American game legislation.

MODEL FOREST CULTURE.

ATTENTION has more than once been called to the gratifying progress in forest culture since the setting aside of the forest reservations in the West created a public excitement which led people to examine into the subject for themselves. While a few years ago the great public was entirely ignorant and unconcerned about the matter, the conditions are now very different.

One of the most practical steps looking to the interesting of land owners and lumbermen in handling their forest lands has recently been taken by the Division of Forestry of the United States Department of Agriculture, of which Mr. Gifford Pinchot is at the head. This is a plan to furnish assistance to private owners of forest lands, so that they may be enabled to handle these holdings to the best advantage—which means to their own greatest profit, and to the best use of the forests as protectors of the soil and of the water supply.

As a rule, the farmer regards his wood lot as so much waste land, valuable only for the fuel and the fencing timber which it produces. He works in it in winter, when he has nothing else to occupy himself with, but he hardly regards this work as bringing him any return, although it furnishes him with fuel through the year. If, however, the farmer or the owner of a tract of woodland can be shown that there is money to be made out of this land, if it is properly handled, he will certainly make an effort to treat it so that it will produce an income. Mr. Pinchot is taking steps to give this information. In other words, the Division of Forestry is prepared, so far as its very inadequate appropriations will permit, to assist owners of wood lots and of the larger tracts of timber valuable for lumber to handle their timber lands in the way which shall be most profitable to them. Tracts of any size, from five acres upward, are eligible to treatment. The only distinction made is that the owners of large tracts, which may present more difficult questions, will be required to share in the expense of solving the problem of administration, while owners of small tracts will receive assistance without bearing any part of the cost. Applications for such assistance will be considered in the order of their receipt, but where a particular piece of land promises for any reason to furnish a useful example, precedence may be given to it.

Two forms of agreement to be made between the land owner and the Department of Agriculture are issued by the Division. One, the wood-lot agreement, provides that a plan for working the wood lot shall be prepared by the Division, and that the Department shall supervise the execution of it without charge to the owner, and shall even defray the expenses and pay its agent. The only condition made by the Department is that it shall have the right to publish and distribute the plan and its results, for the information of farmers and others whom it may concern.

The timber land agreement, which applies to larger bodies of land, is much the same as the other, except that it is provided that actual and necessary expenses for traveling and subsistence of the agent or agents of the Department working under the agreement shall be paid by the land owner, who shall also furnish the assistants needed by them without cost to the Department. It is especially provided that the Department of Agriculture shall in no respect participate in the receipts from the land, but shall have the right to publish and distribute the plan and its results for the information of lumbermen, forest owners and others whom it may concern.

It is obvious enough that offers so liberal as these are likely to be accepted by many land owners, large and small, and that the Department of Agriculture, with its insufficient appropriations, will be able to care for only a few of the applications which it will receive for such assistance. Nevertheless, the good which will be accomplished by this plan can hardly be over estimated, since to carry it out even on a small scale will result in the setting up in many localities all over the land of a series of model forests, which cannot fail to be object lessons of the highest value to land owners residing near them. Moreover, a very large number of owners of large tracts of timbered lands will undoubtedly avail themselves of this opportunity to have their forests handled in a scientific manner. A number have already done so. Among them Messrs. Whitney and Webb, in the Adirondacks, where, it is gratifying to learn, not a stick of timber can now be cut except under the supervision of a trained forester. We can imagine how differently these grand forests would have looked to-day if a plan like Mr. Pinchot's had been adopted twenty-five years ago.

No one has borne a larger part than Mr. Pinchot in stimulating the interest in forest preservation in the United States, and it is a matter for sincere congratulation to the country at large that a man so well trained, so able and so energetic, is chief of the Forestry Division of the Department of Agriculture.

SNAP SHOTS.

A few years ago New York expended several thousand dollars on a commission to codify the game and fish laws and to bring order out of chaos. For one year after the commission had completed its work, any person of ordinary intelligence could comprehend the intent of any given section; but the clarification of the statute cannot be said to have extended beyond such a period. The condition is now worse than ever. Nobody can tell, for instance, absolutely what the quail season is on Long Island, or indeed if there is any season. If the Legislature of 1899 will set its face firmly against any amendments of the laws beyond the straightening out of the obscurities, contradictions and hopeless puzzles, it will do all that need be done, and quite the best thing to do. No expenditure of thousands would be required. A fee of one hundred dollars would be ample recompense for the task, and we would cheerfully undertake to secure the services of a competent member of the bar to do it for that sum, and for the gratification he would surely have in the completed work.

To its circle of readers, old and new, FOREST AND STREAM extends the gratulations of the season, and wishes them a Happy New Year. May the outings of 1899 be rich in the anticipation, not less full of solid satisfaction in the actual experience, and giving material for delightful retrospect. One's opportunities may be limited, one's time in the woods all too brief; but of anticipation and recollection no bound can be fixed. This prolonging of a camping trip, in thought of it before and after, is a characteristic of outdoor life which only the initiated can appreciate.

At a meeting of Grand Rapids, Mich., sportsmen last week it was voted almost unanimously by the two hundred delegates to urge the retention of the law which prohibits spring shooting. This is a most gratifying result of the discussion. The laws against spring shooting are unquestionably open to complaint when they restrict the shooters in one State, but give license to the spring shooter in an adjoining State. But the prohibition of spring shooting is right. The remedy of inequalities is to bring under operation of the prohibition those States which are now exempt. This is progress in the right direction. To abolish an anti-spring shooting law where it now prevails would be a most unwise and inexcusable retrograde step. We trust that the Michigan Sportsmen's Association, when it meets at Lansing January 17th, will hold out strenuously for the retention of the present spring shooting law.

The Sportsman Tourist.

A New Year's Swearing-off.

As Peter Folsom came into the kitchen, where his wife and daughter were busy about the roaring, glowing stove, on whose top the coffee-pot bubbled a soft accompaniment to the shrieking and sputtering of a pan of sausages, and out of whose elevated oven came the aroma of baking potatoes, he glanced up at the clock and the long-barrelled fowling-piece that hung beside it, then furtively at the stove, but not at his wife, as he addressed her: "Is breakfast 'most ready, mother? 'Cause if it hain't, I'll git a bite o' suthin' an' be off, for I'm kinder in a hurry."

Mrs. Folsom set her lips firmly to the delicate task of turning the sausages and accomplished it before she demanded: "What be you in such a pucker for, father? Be you a-goin' somewhere on business?"

Peter cleared his throat and answered rather defiantly, "Wall, yes, sorter. You might say business and pleasure. I'm a-goin's to give them haoun' dogs a little ex'cise. It's the neatest mornin' 't ever was; not a breath stirrin', an' a little speck o' new snow, jest 'nough to kiver up ol' tracks. Seems 's 'ough I'd orter improve it, for the' won't be another like it this year, bein' it's the last one in it."

His tone had become apologetic, but neither that nor the poor attempt at a joke softened the set sternness of his wife's face.

"I s'pected as much!" she said, with a short, contemptuous laugh. "Wall, if that's all, you'd better set daown an' eat your breakfus' wi' the rest on us like a civilized bein', when it's sot ont' the table, when the boys come in from the barn. I should think 'at you'd got abaout old enough tu quit a-rampin' 'raound up hill and down dale arter a mess o' yollopin' haoun' dogs a-distractin' decent folks wi' their plaguey noise!"

"If some folks hain't got no ear for music, I do' know as the haoun' dogs is the blame for it, singin' glory halleluyer, no more 'n the birds is for singin' in the mornin'," said Peter, with his back to his wife, as he washed face and hands at the sink. "I've hearn folks find fault wi' them."

She vouchsafed no rejoinder beyond a contemptuous sniff.

"'Lizabeth," he said to the daughter, while he wiped vigorously on the roller towel, shaking out some words and smothering some. "You see if you can't find me a 'tater 'at's done, an' gi' me a piece o' sassidge an' a cup o' coffee."

Then seating himself at the table, he took up Mrs. Folsom's assertions at the beginning, while he awaited the bringing of his breakfast.

"You was a-sayin' haow I was ol' 'nough tu quit huntin'. Wal, I hain't only just turned o' sixty, an' my gran'ther he hunted when he was in his eighty-fif' year. Father didn't hunt none, but he was able tu when he was eighty year ol' if he'd wanted to. That gives me twenty year on't yet."

"The wust on't is the eggsample you're settin' your boys—a-shootin' 'raound," said Mrs. Folsom.

Her hubsand broke a Mercer potato in two and whetted his appetite with a sniff of its fragrance before replying, "That idee hain't no gre't weight, sence they don't care a button for huntin', 'ceptin' little Pete; he takes arter my gran'ther some—t'others arter their gran'ther Tom's ol' hoss, more's the pity, an' Joe's all cattle. Pete's got dog an' gun born into him, an' you can't git it aout on him, 'gsample or no 'gsample." He mashed and buttered his potato while his wife fitted another arrow to her bow and presently let fly.

"It's mis'able, goo'-for-nothin', low-daown, lazy, loafin' business, an' them 'at follers it hain't no 'caount. Look a' ol' Bill Leggett an' Jim Fisher!"

He fortified himself with a mouthful of sausage and as much potato as a quarter of his knife blade would hold, and began speaking before his mouth was clear of them. "I don't hold 'at a man had ort tu hunt all the time when game's as scarce as it is now-er-days, but take it reasonable. You don't want tu go tu quiltin's every day, nor try tu live on tea wi'aout no victuals. Took reasonable they're stimerlatin' an' comfortin', an' so's huntin'. Billy an' Jim overdoes it, but I know wuss men, an' they be 'at belongs to the church. An' as for me, I've allers managed tu git a decent livin' off'm the farm, an' go a-huntin' once in a while tew!"

"I hope you allers will, father," said Elizabeth, at his elbow with his coffee.

"It's a snare o' the evil one," Mrs. Folsom said, piously, giving the last link of sausage a spiteful jab as she transferred it from the frying-pan to the platter. "The hymn says, 'Satan allers finds a job for idle hands tu du.'"

"A fellow 'at's a-huntin' in airnest hain't turrible idle," said Peter; then, in parenthesis, "'Lizabeth, won't you jest give them 'ere dogs some col' johnny-cake. The good book tells o' Nimrod a-bein' a mighty hunter afore the Lord, which, it 'pears, his doin's was approved on."

"Proberbly he didn't hev sons growed up, an' a-growin' up, an' a darter a young woman grown. Proberbly he didn't hev no wife, even."

"It's a hopesin' he didn't!" Peter interrupted, fervently.

"So say I!" she cried, with equal fervor. "A man 'at goes a-huntin' hedn't ort tu hev no wife to worry abaout him, an' be 'shamed an' lunsome an' bothered wi' haoun' dogs allers underfoot an' allers hungry an' slobberin' an' into everything! He'd ort tu be a batchelder an' a hermit, but he's more like tu be a widderer if he's single, but pussecuted women don't never die fust!"

Peter ate in silence, pondering deeply, until his sons came in, noisy and hungry, from the morning chores, and with them the two gaunt hounds, whimpering and careering in an excess of joy that belied sorrowful faces. While they snatched apportioned alternate rations from Elizabeth's timid fingers and beat the skirts of their unfriendly mistress with their slender, bony tails, their master arose and put on his deep-pocketed, blue-striped woolen frock, took down the long gun, powder-horn and shot-pouch, and then, facing about, addressed his household.

"I do' know but what you're right, mother, an' I p'sume tu say I be an ol' fool, an' orter quit a-bein' one. Anyways, I been tol' on't times enough, an' I've got sick an' tired of hevin' on't hove in my face an' dinged intu my ears. So I tell ye, all on ye, this ere's my last day. Whatever my luck is, tunight I swear off a-huntin' forever an' ever more. The dogs I'll give away afore I come hum; the gun I won't—it was gran'ther's, an' Pete can hev it for his'n, if he's fool enough tu go huntin' when he gits growed up an' lucky 'nough tu be 'lowed tu in peace. Mother, Tom, Joe, 'Lizabeth, Pete—this 'ere's the last time you'll see me a-goin' aout wi' haoun's an' gun. Pete, arter you git your breakfus' eat, if you're a-min' ter, you can take your gun an' come up ont' the hill. If we start a fox, an' we shall, if the' is one, he'll run on the bare ledges. Come Scott, come Pappinew!"

He went out, followed by the four-footed namesakes of two then popular heroes, one of the United States, the other of Canada, and followed by the gaze of the family.

"Wal, I never!" Mrs. Folsom gasped with returning breath.

"Father's got his dander up!" said horsey Tom; and Joe, stolid as one of his pet oxen, stared as calmly and silently, while the more sympathetic Elizabeth cried out, pitifully:

"Poor father, it's too bad tu hetchell him so!" and Pete bewailed the loss of his friends, the hounds.

Though the household gods frowned, nature's mood was benign, and she seemed to have set herself to making Peter Folsom's last day with gun and hounds a pleasant one. The sky was unclouded, but filmed with haze, and the windless air, through which such slight noises as the tapping of a downy woodpecker or the piping of a nuthatch came from distant woods, was so soft that the inch of newly fallen snow took the imprint of footsteps like a sheet of white wax. Thereon a fox had left a record of his nightly wandering, and the old hound Scott, reading it by a finer sense than sight, proclaimed it with deep-toned trumpet-blasts and Papineau gave confirmation in higher key, while from woods and hills a chorus of echoes swelled the musical confusion. Reynard awoke from his morning nap and forthwith betook himself to his traditional tricks on his ancestral runways, where he was waylaid and low-laid by Peter the elder, before Peter the younger appeared upon the scene to exult in and envy his father's success. The hounds were as keen for further work as at the beginning, and soon found another fox full of years and cunning, which availed him not in the end, for the father—that he might have a worthy successor—gave the son much instruction concerning runways, which the latter so quickly put to use that he got the first shot at the fox and killed it, an achievement which his father gloried in as much as he, though more soberly.

Foxes were abroad that day, and another was started who was wiser and more fortunate than his predecessors in steering clear of manned runways, and at last took sanctuary in the cloisters of the earth. The continuous music of the hounds had called out all the hunters within hearing of it, and they now gathered about the hole where the hounds were taking turns at baying and tearing at the frozen earth.

Before the company Peter made a final renunciation of sport, and burned his ships, giving away his hounds to an old comrade who he was sure would treat them kindly. Everyone wondered at his strange action, but he would give no explanation, and turning his back resolutely on his friends, he trudged bravely away, followed by the boy, a little comforted by the trophy that dangled from his pocket for the parting with the dogs, who, straining at their leashes, their brows deeply wrinkled with puzzled inquiry, whined in sorrowful farewell.

"If ever you hear the dogs a-comin' off'm the hill this way," Peter said to his son, as they crossed a long ridge in the open fields, "an' you can git tu that 'ere thorn-apple tree by the fence quick enough you'll sartin' git a shot at the fox. I hain't never knowed 'em tu fail a-crossin' there in forty-five year, an' many's the one I've laid aout there. But, oh, Lord! I shan't never ag'in!" He heaved a sigh from the depths of his bosom and turned his face from the favorite old runway, around which clung such happy memories.

When they reached home he hung the gun in its hooks, sadly pondering the thought that he should never take it from them again for any nobler purpose than shooting a corn-pulling crow or a raiding hen-hawk—never again for a day of glorious sport. He lingered long over the stretching of the pelts, giving his son minute instructions and remembering how awkwardly he skinned and stretched his first trophy, and comparing the dexterity which experience had given.

The house looked strange to him without the familiar hounds, concerning whom young Pete confided to his sister.

"He just gi'n Scott and Papinew right aout an' aout tu ol' John Benham. He pooty nigh cried when he done it. I was tew mad tu—givin' away them haoun's, the best there is in ten taowns."

"Clever ol' critters, I shall miss 'em," Elizabeth sighed.

The first day of the New Year was patterned after the last of the old year, as cloudless, as soft-tinted with haze, and as windless, but for a breath of warmer air from the south, yet so light that it did not sweep away the echoes, nor its murmur disturb their far rebound.

One cast afar from a gorge of the wooded hill caught Peter Folsom's ear as he walked from the barn to the house in the middle of the forenoon. It had a familiar cadence, and he stopped, listening intently. Again the mellow echo came across the wide fields, and with it another as melodious, but higher pitched.

"It's Scott an' Papinew!" he exclaimed aloud, and now, as they broke over the crest of the hill in full cry, an ear less keen than his could not have mistaken the voices. "John's fetched 'em up there jest tu aggravate me, an' it's tew 'tarnal bad! Sech a day tu hear a dog! Sech trackin'!" He pressed his fingers on the soft snow that capped the fence post beside him, his eyes and ears intent on the hill crest, along which the chase now tended, trumpet and bugle now alternating, now in unison, now indistinguishable in the jangle of their own echoes.

They reached the end of the hill, turned and drew near the foot, and Peter soliloquized in short, eager sentences, as he looked and listened. "There, they're comin' off 'm the hill! If they du, I'll bet the fox'll come tu the thorn-apple tree! I'll bet the' haint nob'dy stannin' there! The' haint be'n time for 'em tu!"

He moved to where he had a view of the low-spreading tree in scraggy silhouette against the blue-gray sky. "No, the' haint a soul! He'll go by, an' git tu the west woods, an' that'll be the end on't! Oh, if the' was anybody I could send! Pete! Pete," he called. "Oh, he's gone a-skatin'—plague on't! If 'Lizabeth could only shoot! Tom an' Joe wouldn't go a rod if they was here, blast 'em, an' they couldn't hit a meetin' house a-stannin' still! I'd hev' jest abaout time! Th' ol' gun is loaded for business! Oh, I swear! Flesh an' blood can't stan' it. I've got tu go!"

He broke for the house on a run, burst into the kitchen without slackening his pace, almost upset his wife and daughter, in the midst of their New Year dinner preparations, seized the gun and was out again and away before they recovered speech beyond squeals and exclamations.

Running to the door, they saw him going at top speed across the fields, heard the eager baying of the hounds, and the situation was made clear to them. They saw him reach the fence and run beside it, crouching like a skulking partridge, till he came to the thorn tree, and then standing beside it as steadfast as its trunk. Then they saw the long gun rise slowly to an aim, belch a cloud of smoke, and him running into the smother before the report came rolling down to them. They saw him come out of it, swinging something aloft from the leaping hounds.

Mrs. Folsom exhaled a deep sigh of relief. "Wal, your father's got him!"

"Be you glad, mother? I be," Elizabeth asked and answered for herself, as her mother did not, but turned and went into the house.

Half an hour later Peter returned, meek and shamefaced, with the hounds plodding soberly at his heels. But there was a gleam of pride in his eyes, as he threw his trophy from his shoulder, a beautiful silver-gray fox.

"I reckon you folks would kinder lufter see the critter wi' his clo's on. I didn't let the dogs touch him. He's the han'somest one ever I see, an' you an' 'Lizabeth may hev what he fetches, $50, I warrant ye. I hed tu go, mother. It haint no use, me a-fightin' ag'in the sperit an' the flesh, an' I shall hafter go a-huntin' till I break a laig, or git crippled wi' rheumatiz, or die."

"It's a-hopesin' the' won't nary one happen tew ye for a good spell, father!" his wife said, her face shining with a kindly light. "'Lizabeth, the's a hul col' johnnycake on the butt'ry shelf for the hoaun' dogs. You know they wa'n't here las' night tu git fed. Poor creeturs, they du look hungry!"

ROWLAND E. ROBINSON.

"Sport."

SOME time since Louis Benson Akin stirred up a controversy in these columns by his comments on the subject of "Sport," taking for his particular text an account of a sanguinary "scrap" between hounds and a wildcat. My views upon this subject harmonize tolerably well with those of Mr. Akin, but I think it is to be said in justice to the other side that much apparent cruelty and encouragement of brutal "fun" of the dogs-and-wildcat type is chargeable rather to downright thoughtlessness than to real indifference to the sufferings of dumb brutes.

The day after THE storm I was passing down Kneeland street, when my attention was drawn to a crowd of some 200 persons near the Albany Depot. I investigated and found the center of attraction to be a man with half a dozen rats in a cage. He would shake out into the snow one rat at a shake, and then that enlightened crowd of citizens of this hotbed of intellect would kick it and strike it, howling with delight until some one landed on top of the miserable thing and killed it. Was that cruelty? Decidedly it was, but I doubt not that it was largely of the "thoughtless" variety.

Probably there were many men in that rough crowd who would go out of their way to help you, who would perhaps even risk their lives to save you from danger. Many of them might pet and feed a stray, hungry dog and feel genuine sympathy for the brute, and yet if that same poor dog fled in terror down the street with a "tin-canned tail" would laugh inordinately. Such is "thoughtlessness."

The other day, while passing through Jersey City on a train, I saw a crowd of boys engaged in drowning a dog. They had tied to its neck a stone of insufficient weight, so that it struggled to the surface again and again, each time to be punched under by the howling young scamps, to whom this was no doubt "fun" of the dogs-and-wildcat variety. This scene brought to my mind my own infantile transgressions in the way of throwing trapped rabbits into the pond for the dogs to swim down, killing robins with a bean-shooter, and the like. I well recall the lecture concerning useless destruction of life and the infliction of needless suffering which was in later years delivered for my edification by the good old Scotchman who taught me to tie my own flies and kill each trout as soon as he was caught.

"Of all of which the moral is, "Let us be thoughtful of these things and let us teach the rising generation of sportsmen early to discriminate between manly sport and thoughtless cruelty."

R. L. WARNER.

BOSTON.

The Man with the Flint-Lock Kept Up with the Procession.

NEW YORK, Dec. 20.—*Editor Forest and Stream:* I read a good deal in your columns about gun flints and flint lock guns. The subject is such an interesting one that I have actually found in Lexington avenue, this city, a splendid double-barrel flintlock shotgun and have fired it several times at a mark, with good success. This interesting relic is in perfect order. Its locks are like the movement of a watch in delicacy, and, although a muzzle loader, the gun makes a splendid pattern with any kind of shot at 35yds. Some day I'll tell your readers about a day with the partridges up in Sullivan county. Dr. R., the owner of the relic; a young attorney, with a hammer breech loader and black powder; another attorney, with a French "pin fire" 14-gauge; and a newspaper man, with a Baker hammerless, using "E. C." smokeless, made up this interesting and representative quartette.

The Doctor, with his 16-gauge flint lock, killed his full share of the birds, of which twenty fell to the four "guns."

SILEX.

Shooting the Apolima Passage.

If you can picture in imagination the spectacle of the camel threading the eye of the needle with the speed of the swiftest of all express trains, you may get some idea of what it looks like to pass from the ocean into the still lagoon of Apolima, the most beautiful island in Samoa, and by long odds the most picturesque of all spots chosen for human habitation anywhere in the wide world. If you can imagine the feelings of the same camel as he finds himself shot at the needle's eye at the rate of a mile a minute, and suddenly makes the discovery that the eye has in it a cast on which he is in deadly danger of being hurled, you may then know how it feels to shoot the narrow and tortuous pass through bristling coral jaws which is the only access to Apolima.

Apolima is worth the seeing. To have missed it is to be blind to one of the natural wonders of the world. It stands alone in a class alone. Apolima is a case of false pretenses. About midway between the two larger islands it rises from abysmal depths in the strait which parts Upolu and Savaii. Its nearest neighbor, the level island of Manono, lies within a guarding ring of coral, its beach is a continuous strip of glistening sand inviting the voyager to land and stroll at will through the vistas of forest and plantation. About Apolima the diminutive industry of the coral has reared no massive breakwater, the ocean rolls in an unbroken sweep against smooth and shining cliffs, which offer not so much as a cranny into which a finger might cling. At the bottom is the wild tumult of the sea, thence rises the precipice unrelieved by even so much as a clinging fern, then over the summit of the cliffs high in air a glimpse of waving tops of trees as a sign that this island of the straits is not the desolate crag it appears from sea. One may make the circuit, the diameter of the whole island is scarcely more than a mile, and nowhere is there anything to be seen but the fowning wall of volcanic rock, black and red, everywhere beaten by thundering waves. There is but one exception, there is a single opening in the outer wall, one peep-hole frames a most charming picture of tropical luxuriance, one narrow gap entices the voyager to risk the jagged perils which beset the path, and to enter in to enjoy the wonderful scene which meets his gaze.

The island clearly began its existence as a volcanic cone thrust up through the sea in some great commotion of the mighty powers under the rind of the earth. When it was an active vent of the internal fires cannot now be estimated, but in the obscurity of a Samoan legend there is a statement that it was not always in these straits. So far as it is possible to read its history in the exposed rock faces, the volcano could not have been at work very long before its final catastrophe, which quite spoiled it as a volcano, but transformed it into a marvelous home, such as nowhere else houses man. From the rock walls can be seen what happened. The small volcano, newly extruded from the sea, was probably resting after its first activity, a cone containing a lake of fire not much above sea level. Through some seam, which opened as the walls of the crater cracked in cooling, the ocean found its way inward. A sudden puff of steam, the flight of a mass of rock through the air, boundless hissing and explosion, and the water had put out the fire forever, and left the cooling island like a bowl with a piece broken out of one side. That seems to be the explanation of the events which produced the island, for after the first wonder of the novel place passes off the question is sure to arise as to what did it all.

The gateway to Apolima is broken out of its northern wall. A dangerous cluster of rocks about 200ft. seaward shows where the lava flowed out from the riven crater and the shattered fragments of the wall found an offshore lodgment. Between the cliffs, as measured at the sea level, the whole gap is not 300ft. wide, the slope upward to the summit level of the broken wall is very steep, and at that high level the gap is probably not more than twice as wide as at tide level. When one passes inshore of the outlying ledge of rocks, the beauty of Apolima springs suddenly on the sight, so suddenly as to seem almost an illusion. Then one recognizes the fitness of the name which the Samoans have given to the island, for Apolima means "the hollow of the hand," and carries with it the idea of protection, a place of refuge.

The promise extended by the treetops peering over the bare outer walls of rock is fulfilled in the richest measure as soon as the view of the interior breaks upon the sight. The inner face of the crater wall is almost as steep and bluff as the seaward aspect, but it would never be suspected under the mantle of living green with which ferns, bushes and even trees have clothed it, clinging to every spot in which the disintegrating lava has made a pocket of fertile soil. Walled in by this amphitheater, the bottom of the crater is a tiny plain, covered with vegetation, stretching down to the waters of a wee lagoon just within the dangerous gateway to the island. Beneath the waving leaves of the cocoanuts is seen a small hamlet of a dozen or fifteen houses, for the accommodation of as many families, for the restricted territory will afford support for no more. Outside their gateway the ocean is forever in turmoil, yet there is never a ripple on the placid surface of their little lagoon. The fury of the gale may beat on their outer walls, they do not even know that there is a tempest, for the wind can neither enter nor dip down into their calm atmosphere. They live in unbroken peace, while the baffled gale passes harmlessly overhead, 500ft. away. In centuries of constant bickerings, the fleets of war canoes have swept across their straits and past their very doors, yet Apolima is still a maiden fortress. The dozen spears they muster have proved enough to hold off every enemy who has attempted entrance in the brief and uncertain periods when entrance is possible, for at other times the sea locks the place against all comers and against all goers.

To visit Apolima one must employ the usual vehicle of Samoan travel, an open row boat. In these small and open craft the trader and the tourist alike put out upon the very ocean itself for trips from place to place on each island, and for the more venturesome voyage across the straits to other islands of the archipelago. Exposed to the sun and the frequent downpours of the rain, thrown about by the heaving of the sea, and not infrequently deluged with the crest of some lopping wave, such voyaging can never be comfortable. It is safe enough, however, for the Samoans are good boatmen even though they do have the terrifying custom of steering as close as possible to the combing edge of the huge breakers which sweep like resistless cavalry charges upon the reefs or crags of the shore. When you go to windward your reliance is on the strength of the boatmen who tug at the oars for incessant hours without wearying. To leeward you have the swifter and more comfortable voyage with a scrap of sail. That's all of the sense of direction you need in the islands. For all practical purposes the compass is not needed. The four cardinal points are windward and leeward, seaward and inland; this simple equivalent of boxing the compass is contained in the Samoan jingle, which your boatmen will insist on your learning,

"Gagaifo,
"Gaga'e,
"Gauta,
"Gatai."

Still, if you have your boat and a good crew, and keep the little verse steadily in mind, not even then are you at all sure of seeing Apolima when you set out to see it. The first part of the voyage is all plain sailing. From Apia you run down to west and leeward in the still lagoon of shallow water inside the barrier reef. You must make your start when it is close to high water, for the lagoon is shallow. Just back of Mulinu'u Point, where the Government sits all day and wonders what it is there for, there is a broad sand bank. A few miles further along is a sad tangle of rocks, and to get past these difficulties the tide must be high. But once past the rocks of Faleula, the lagoon is a fair way, and there is nothing to check the swift run before the wind down to Mulifanua, the end of the Island of Upolu. In every small bay, which opens on the sight as you go whizzing from one headland to the next, a Samoan town is to be seen under the groves of cocoanuts which fringe the glittering beach. Almost at the end of the island are the clustered structures of the largest of the German plantations. Just past this station the channel setting close in shore gives opportunity to see the ruins of some mammoth erections of stone and earth, of which the history has been lost in the mists of Samoan tradition. Here the lagoon widens out to include the Island of Manono, for which the boat must head on its way out. Here one must halt to ask of the people as to the chance of entering the sister islet, which lies a few miles outside the still waters of the lagoon. Generally they can tell in Manono by the look of the sea breaking on a certain portion of their reef whether the Apolima pass is practicable. If their judgment is adverse you halt at Manono and wait for a better opportunity. They can always tell you surely if the pass is impracticable. They are by no means so certain when it may be run. As to that you have to take your chances.

After leaving Manono you are quite at sea; there is no reef to still the stretch of water, the angle at which Savaii and Upolu lie with respect to one another creates a sort of funnel to direct the sea into the ten-mile strait and to magnify the waves. Here you must take your chances on adjusting the physical system to the peculiar combination of squirm and wriggle which is the motion of a small boat perched on the crest of the high sea waves, varied only by dizzy slides down water-sloped and painful climbing up shifting hills. After some two miles of this sort of sailing you draw close alongside the rocky outer walls of Apolima, and the boat boys feel happy to be able to skirt the sea-beaten cliffs right in the highest swell of the outer line of breakers. Their choice in this matter is responsible for the intimate acquaintance you gain of the rock conformation of the outer face of the island. In a dull sort of despair you try to pick out the one particular spot on which you are about to be dashed in water-torn pieces. While you are making this round you are sorry you came, it really seems scarcely worth the while to undergo the discomfort of coming so far only to be broken and drowned on a face of rock which nowhere offers even a crack in which the fingers might take a last hold on life. A little more of the circuit and you see the outlying barrier of the gate of the island and a slim path of watery tumult between the surf ashore and the surf just a little way out in the sea. Into this tumult you steer in a state of mental desperation as to which you are very honest in the confession that you really wish you had been content to trust to the pictures of the place. All at once the gateway opens in plain sight before you; you can feast your eyes on the marvelous beauty of such a landscape as is to be found nowhere else in the world, you pluck up courage and are now as anxious to get in and see more as but a moment ago you were wishing you were well out of it.

APOLIMA PASSAGE.

Despite your access of courage, the most difficult part lies before you. Up to this you have been in discomfort, now you will have to take your chances of a very real danger. There is plenty of time to consider all the details of the peril, and the more those details are looked upon the more distinct do they become in every item of frowning rock and gnashing tusk of coral. The first thing is to find the one spot in the whirl between the open gateway of the passage and the smother of surf on the reef outside, in which the boat can be kept still. There you must wait the leisurely movements of the villagers of the island, who will make signals as to whether it is possible to come in, a matter which it is almost impossible to determine from the outside aspect of the passage. If their signals are favorable, they will launch their canoes and cross their own duck pond of a lagoon to take positions on the rocky jaws of their island's gateway, to be in a position to give help, for there is always a bright prospect that help will be needed. There is presented a sharp contrast. Outside the gate your crew are rowing with long, steady strokes, merely to keep the boat in one place, in a smooth eddy of foam and whirling suds within a wild jabble of waves; as you are lifted from the depths high into air you look down upon the canoes on the lagoon within moving as smoothly as paper boats of children in a tub of water.

Between the tumult and the peace is a narrow and a crooked passage between the rocks, through which you must make your way. It can be done only on the last two hours of the flood tide; even then it is always dangerous, from outside it seems an impossibility. As each wave recedes it lays bare the whole stretch of the rocky barrier, and discloses the twists of the narrow passage between lagoon and raging sea. This barrier is only 50ft. across, that is, from the sea to the still waters beyond. When the wave recedes the channel is seen to be no more than 8 or 10ft. wide, and partially blocked in places by coral formations. Through this lane, where there is not room for oars, it is necessary to run with the utmost precision of fine steering, and the crew will seldom entrust that part of the operation to any white man unless they have learned that he is skilled in the quick handling of small boats. Only a few white women have ventured to shoot the passage, and certainly none has been allowed to handle the rudder at the critical moment, for the lives of all depend on the man at the helm. As the pass is far too narrow for oars, and as they would anyway be useless in the magnificent velocity of the wave stream, the sea is relied on to furnish the motive power. The boat is kept in the

smother of the eddy under the off shore ledge of rock while the crew and helmsman watch intently the way in which the sea breaks on and over that barrier. Sea after sea passes by and tumbles into banks of fine spray on the threshold of the island gate. Not one of those seas has promised to carry the boat through in safety. At last a higher roller is seen to rear itself far out beyond the outer barrier, and to come rolling shoreward with a magnificent stretch of perpendicular face. All are intent upon its progress as it sweeps grandly inward with ever accelerating velocity, for it may prove the wave so long waited for. If it is seen to pass unbroken over a pinnacle outlying in front of the main ledge by a small interval, it is known that that is indeed the wave to use. As its wall face sweeps on the boat is rowed shoreward out of the eddy, the oarsmen put then their every pound of muscle and courage into the oars as they back water into the very cliff of water which is swooping down upon the boat. There is the thump of wood and water as the wave hits the stern of the boat and begins to heave it in the air. The crew pull now like men possessed, for the few boat lengths which intervene they must keep the boat on the advancing face of the giant wave. The speed is something terrific, the prospect is something appalling to view from the lifting stern of the boat, coasting with tremendous velocity down the steep slope of a hill of water, which is itself careering onward with far more than the speed of a railroad train. Just in front lies the wall of the gateway, dripping yet with the foam of the last wave, tense figures of the islanders clinging to the rocks in readiness to reach out into the commotion and snatch the shipwrecked from drowning in case of disaster. With a last struggling effort the crew bend to the oars and draw them inboard and out of the way of the rocks between which the boat must pass without a check, for even the slightest check would mean prompt destruction. The ears are deafened with the roar of the breaking of the tons of water on the rock, the eyes are all but blinded with the salt cloud of mist into which the water is hammered by the impact. The boat must be just one single instant ahead of that thunder and that breaking of the water, it must be headed exactly into the narrow rift in the rock just a foot before the crest of the propelling wave shatters over upon the immovable obstacle. Then as the water boils into the constricted channel it seizes on the boat and hurls it onward until it seems that the might of giants would not avail to direct it away from the fangs of rock and coral which beset the way. But answering the steering oar the boat is directed through those fifty dangerous feet, avoiding a danger on the right only to be confronted by another on the left, sliding past rocky perils with so close a margin that it looks as if a sheet of paper would be torn to rags between the boat and the rock. With every minute fraction of an instant the still lagoon is nearer. Still the peril is not yet past. Just as the boat clears the walls of rock and is on the very instant of passing in and floating peacefully on quiet waters the boys throw out the oars and pull as hard as ever. With all their strength they can do no more than keep the stern of the boat just barely clear of the channel out of which on its inner side it has just escaped, into which the outward rush of the waters is seeking to drag it. There by dint of hard rowing the boat just succeeds in standing still until the efflux is past, and the turn of the waters with the startling advance of the next incoming breaker allows of escape into the lagoon. Then, as the crew, exhausted by the excitement, takes leisurely strokes across the smooth water, and to the landing place, the Apolima people set up a shout of welcome to those who have adventured so much to see the island.

They gather around and proffer that hospitality for which they expect so generous a reward; they ask the crew whether the lady was frightened when the boat came through the pass, and when they get the answer that she was courageous they turn to congratulations and say how very few white ladies have ever ventured on that trip, and how it often happens with white men who have come through the gap that they were too weak to take a step for a long time afterward.

Such is the getting in to Apolima. The getting out is even harder, for, as the boat is sucked out through the narrow channel, it meets just outside an incoming wave, up which they must row hard in order to get on the seaward face in time and slide down hill before it begins to break. It can be done only on the first two hours of the ebb tide, seldom is it possible to go in and to come out on the same day; often visitors are held for a week at a time waiting the chance to get out.

LLEWELLA PIERCE CHURCHILL.

On Kansas Prairies.

RAMONA, Kan., Dec. 12.—*Editor Forest and Stream:* Yours of the 2d inst. received. In answer to your question whether anything can be done to stop the slaughter of game here, I can only say, so far as my own influence goes, I am doing a little in that way, for I am wholly opposed to any shooting further than the game that can be used by one's self or immediate friends. My copy of your paper also is passed along to a little circle of friends, so I think it is not wholly in vain that I have lived in Kansas. Further than this, I can only say that the State game laws are far in advance of public opinion—although some are waking to the need of game protection.

In my opinion the one thing that would do the most good would be the establishment of game preserves, either by the State or private individuals. I speak of this to the farmers, telling them that properly managed the shooting rights on their farms and ranches could be made in many instances almost as valuable as any other part of their business. If well-to-do Eastern sportsmen knew of the almost unlimited possibilities in the way of small game of a Kansas game preserve, they would make haste to establish such places all through here. Unbroken prairie rents for from 15 to 75 cents per acre, and corn and wheat land from $1 to $1.50 per acre per year, and that right near railroad lines, and the game interests need interfere but very little with the agricultural interests. A few lines of hedge, a patch of kaffir corn left unharvested here and there, a strip of slough left unmowed, a pond or two in each slough, made at the expense of a few dollars for the use of a team and scraper, and you have an almost ideal hunting ground for quail, rabbits—both jack and cottontail—plover, wild ducks, an occasional wild goose, and in this section prairie chickens. As an instance of this kind, a gentleman resident near here, who has a line of hedge around his farm, told me that in November this year, without going more than a mile from his house, himself and a visitor friend shot on the wing in a day and a half shooting 144 quail; myself and others have shot over the same ground since, and found the birds in fair supply still.

Since living in Kansas and comparing the game interests with those of the East, and seeing so little from this State in your paper, I have often wished to write you of the game here, its habits as I have noticed them, and the different ways of hunting as practiced here, but had not thought you would care to have me do so, but if you think any portion of such articles would be worth printing, would gladly write them.

Am still in camp here on the prairie, not in a hunter's camp, but as part of a threshing outfit. The cooking and eating are done in a house 8ft. wide by 20ft. long, and we sleep in a tent all of the time. The hunting is done when we move from place to place, or when, like to-day, we are storm-bound. As I look out southward, it is across the old Santa Fe trail, with not a house in that direction in sight, and the prairies in their snow-bound loneliness stretch away and away, dreary, desolated, horrible; or gloriously beautiful in their boundless freedom, just according to one's temperament. I thank God they are to me "a thing of beauty and a joy forever."

PINE TREE.

Three Chumps in a Boat.

I BELIEVE I am the only man among your veracious contributors who ever tells about the time he did not do it. It is easy enough to tell about the time we kill lots of game or catch a lot of fish, and some fellows can even tell about letting flies go fishing by themselves. But it takes nerve to tell a plain case of failure after indulging in high hopes.

We had been calculating on a trip down Cache River. This stream crosses the Iron Mountain Railroad at Martin, and the Memphis Railroad at Cache, the distance by land being about forty miles. So the night before Thanksgiving, Clarence Tate, my oldest boy, Will, and myself started for Martin, equipped with a camp outfit, a Bond boat and an Osgood canvas boat in a very indifferent state of repair. For armament we had shotguns and shells galore, and a Winchester that carried a shell 1ft. long, and of a caliber slightly smaller than the guns in the forward turret of the Oregon. That was to kill the bears that our excited imaginations had stationed at convenient intervals in the wilderness.

We reached Martin about 7 o'clock Thanksgiving morning, and by the help of a truck and the ubiquitous Senegambian got ourselves afloat in the river, we three in the Bond boat and the freight in the Osgood. We knew that the river went to the Memphis Railroad, and that the country was uninhabited, and there our knowledge ended. We found the river at that point about 60ft. wide, bank full and with a stiff current. We also found that it was as crooked as a corkscrew, and not half as useful. We planned to stop at 4 P. M. and prepare our Thanksgiving dinner, and this is the menu we had in mind: Fried fish with Irish potatoes, broiled bear steaks, tomato sauce, roast saddle of venison, roast turkey, and coffee and doughnuts for dessert. The last we carried with us, and we had a cinch on them at least.

We pushed gaily off and found the navigation very bad, obstructed by logs and drift, and the miserable Osgood in tow was leaking like a sifter, and always in the wrong place. About three hours after starting we came to a sawmill and beguiled a lank canebiter into conversation.

He told us we were two miles by land from Martin, and that it was 180 miles to the Memphis Railroad. We shoved off and unanimously voted the canebiter a liar and the descendant of a generation of liars. All that afternoon we struggled with the difficulties of the river, once unloading and carrying around a tree. I will mention here that this stream is called navigable, and figures in the River and Harbor Bill for an appropriation. Congressmen are really of some use after all; for nobody but a Congressional genius could have discovered that that part of Cache River was navigable. About 4 P. M. we put into shore to prepare that Thanksgiving dinner. It consisted of squirrels and bacon, instead of bear steaks, and the dessert we had with us. We were congratulating ourselves that we had at last got away from the railroads, when the Iron Mountain trains whistled right back of the camp, and we found we had been going parallel with the road instead of away from it.

Next morning we entered what is known as the Black Swamp. The river loses itself in an immense cypress and tupelo swamp. Sometimes there was a channel and sometimes we followed the current through the trees. It was then we most admired the Congressional genius who gets the appropriation. After awhile we came to the point where the Doodle Bug Railroad crosses the swamp, and I proposed that we wait for the semi-periodical train that ran on it and get out to civilization once more. But the others wanted to go on, and we left the last relic of civilization and plunged into the swamp again. About 4 o'clock it began to rain gently, and no land in sight.

About that time we jammed the Osgood into a snag and knocked a hole in it. A convenient rag served as a plug and saved the freight. Just as we had made up our minds that we would have a rainy night in the boat, we saw a piece of land in the swamp, and working our way over there, found a large Indian mound with a large cypress log floated across it. It must have been a web-footed race of Indians that built that mound, but they had our heartiest approbation of their job. We camped and ditched the tent for a rainy night, and as soon as we got that done the weather clerk changed his mind and it cleared off. Next day we got out of the swamp and began to find banks to the river and some ducks. The bear, deer and turkeys never materialized, but we had ducks for dinner and supper and a dry place to camp.

Late Saturday evening we came to a house, the first since leaving the sawmill, and found we were fifty-five miles from the Memphis road. We began to repent of our remarks about the canebiter at the sawmill. The next day was the last of our stay. About 9 o'clock we reached Mayberry's Ferry, and shipped our freight and the Osgood on the steamer Iolanthe, which would come down some time in the future, towing a barge of staves, and started on a forced run to the bridge in the Bond. We had oars and two paddles, and all hands went to work. Within an hour all the ducks we had not seen came into the river. Every slash and every copse in the edge of the water was full of them. But we could not stop. We had no camp outfit, and the ice formed every night, and there were no houses to stop in. So we pushed on, killing a duck now and then that flew too close to the moving boat, getting perhaps about twenty-five that virtually committed suicide by not taking the trouble to get out of our way.

At dark we came to a plantation, the first we had seen since Mayberry's, and the omnipresent coon told us it was five miles to the railroad by land and twelve by water. We drove a bargain with him to take us to the railroad; and to show the crookedness of the river, the first thing he did was to drive a mile up the river on his way to the railroad. Time was short, and a little persuasion and the promise of an extra reward if he made the train caused him to keep his team in a dead run over a corduroy road, and we made the station five minutes ahead of the train, and by that narrow margin made our way home at the appointed time. I had promised my wife a bearskin for a rug, but the debt is still unpaid. I want the Congressional genius and the United States engineer to go over that route and blaze the way from Martin to Mayberry. I do not care about the logs being removed, but I do think a navigable stream ought to be blazed so a skiff could find where it is in high water.

From Mayberry down is a fine game country, and if we had had time to hunt, we could have done well. But let none of your readers ever start at Martin if they value their high standing in the church. Fortunately there is no one in the Black Swamp to hear the remarks made about the condition in which Uncle Sam keeps his navigable streams. But once is enough, and the next time any unknown rivers in this country are to be explored, some one else can do it.

J. M. ROSE.

The Ascent of the Grand Teton.

Editor Forest and Stream:

If standing up and vociferously calling a man a liar were argument, then indeed would Mr. Langford have a strong case. Tom Cooper's affidavit is what troubles the gentleman now, and well it may. He is one of Wyoming's best citizens and could send you hundreds of testimonials from our leading men as to his veracity, if he so desired. Until Mr. Cooper's testimony is impeached that affidavit must stand. And the mere fact that Mr. Langford has stated that "Judge Potter's good opinion of Mr. Cooper will not be shared by everybody" does not make it so.

The statements made in the Scribner Magazine article are sufficient to convict him without further testimony. He declares that he found mosquitoes on the summit of the Teton, 13,8coft. above the sea. Now in the latitude of the Teton timber line is somewhat under 10,000ft., and it is a fact well known to every resident of our mountain country that these insects are never seen 1,000ft. above the last growth of timber. We are not compelled to go to St. Paul to obtain information as to the habits of the mosquitoes in the Rocky Mountains. And yet Mr. Langford states that they found mosquitoes nearly 4,000ft. above the timber line. This statement will sound well in the Rocky Mountain country, where live the people taught by from twenty to fifty years of actual experience.

Within 125ft. of the summit of the peak, Mr. Langford insists, "flowers also, of beauteous hue and delicate fragrance, peeped through the snow wherever a rocky jut had penetrated the icy surface."

This is quoted verbatim from his article in Scribner's Magazine. I wish to call especial attention of your readers to this particular statement, for some later climber will be able to tell who was right. There isn't the semblance of a flower in the last 500ft. of the climb, and Mr. Langford's statement that he found them within 125ft. of the summit is conclusive evidence that he has never seen the summit of the Grand Teton.

If Mr. Langford is in earnest, let him accept the following proposition: We will select three representative, disinterested men, and send them to the Teton Peak to make the ascent and examine every foot of slope over which he says he climbed. If they find a single flower, or plant which ever bears the flower, anywhere on that slope, I will pay the expenses of the party. If they do not find anything of the kind then Mr. Langford must pay them. This will settle the question beyond argument, and Mr. Langford should not hesitate to accept the proposition. This committee can, at the same time, give us their opinion as to the ability of the mountain sheep to climb to within 125ft. of the summit. Mr. Langford insists that the mountain sheep can climb where a party of men, assisting each other and well equipped with all the paraphernalia known to the sport, cannot go. And of course he knows. His facilities for obtaining information on this point have been vastly superior to those of the men who have lived their entire lives in the Rocky Mountains and hunted these animals for a quarter of a century or more!

Concerning the overcoat which the Captain insists that he wore while on the summit of the peak to keep him from freezing to death while the mosquitoes were devouring him, he says: "It was for the purpose of freeing myself from all unnecessary weight of clothing that I left in the camp my camping coat and wore a much lighter overcoat, and none other.

Of course all your readers will recall the numerous pictures of the parties of Alpine climbers on their way to attack Mt. Blanc, the Weisshorn or Matterhorn, etc., etc. They are always pictured wearing long-tailed ulsters and the like, having left their other coats at home; the overcoats being so much less cumbersome and weighty! Isn't this a striking picture?

To show Mr. Langford's consistency, I will quote two statements made by him—the first in his magazine article of 1873, the other in a letter to Mr. Gannett, of date April 26, 1897. In the magazine, speaking of his alleged ascent

of the Teton, he says: "But as it is not probable that another ascension will be made *in our day*," etc., etc. (my italics). Now here is what his letter says: "It cannot be long before some well-equipped explorer will climb to the top of the Grand Teton. There are plenty of men who can accomplish this if they will set about it right. Not everyone who makes this effort will succeed, but it will *in our time repeatedly be accomplished.*" (The italics are mine.)

These facts remain, however: Mr. Langford left no record of his ascent (?), and of course for a very excellent reason. Tom Cooper's affidavit still stands unimpeached; and subsequent climbers will verify what I have said concerning the flowers which the Captain insists he found within 125ft. of the summit.

Mr. Langford says of me that I am "a man destitute of any high ideal of moral honesty." This is important if true. W. O. OWEN.

CHEYENNE, Wyo., Dec. 9.

Editor Forest and Stream:

I have just read, in your paper, Captain Langford's reply to Mr. Owen's article on the ascent of the Grand Teton, and as the former gentleman has seen fit to charge me with untruthfulness in this matter, I desire to say a word in explanation.

Mr. Langford says: "Mr. Cooper swears that he was a member of the United States Geological Survey in 1872. Mr. Henry Gannett, chief geographer of the Survey, and a member of it in 1872, and ever since, says that Mr. Cooper was not a member of it in 1872. Mr. Cooper also swears that he was a member of the Wheeler expedition in 1872. The Wheeler expedition of 1872 was under the direction of the War Department; that of Hayden was under the direction of the Interior Department, and they were not connected. Was Mr. Cooper at the same time a packer in both the Wheeler and Hayden surveys, separated by long distances and mountain ranges?"

Now in reply to this statement I simply ask any fair-minded man to read my affidavit which appeared in the FOREST AND STREAM of Nov. 5. I saw explicitly therein "that I was connected with the United States Geological Survey in the years 1872-'73-'74-'75-'77 and '78, in the years 1872 and 1873 being with the Wheeler expedition."

The Wheeler expedition of 1872 was just as much a United States Geological Survey as the Hayden expedition, and in my affidavit I have classed them as such, and have said as plainly as I knew how that while I was connected with the United States Survey in certain years, there were two years, 1872 and 1873, that I was with the Wheeler, and not with the Hayden expedition. The fact that these two expeditions "were not connected" cuts no figure whatever in this case. They were both geological surveys in any event, and I have so treated them.

Mr. Langford further says: "Mr. Cooper also swears that at the time, in 1872 and 1873, when he was with the Wheeler expedition, he was personally acquainted with me as one who had charge of a division." I say nothing of the kind. I do not say that I was acquainted with Mr. Langford in 1872 and 1873, as anyone can see who will read my affidavit, which says: "I * * * am personally acquainted," etc. The date of my affidavit is Oct. 21, 1898. "Am" and "was" may possibly mean the same to Mr. Langford, but the average reader will not agree with him. I wish to say that I was not acquainted with Mr. Langford in 1872 and 1873, but met him first in 1875.

Continuing, Mr. Langford says: "I now know that Cooper never saw me." And I know positively that I have seen the gentleman, and am well acquainted with him.

Farther on in his article Mr. Langford, speaking of my statement in regard to the altitude, as derived from my aneroid barometer, says: "Does anybody believe that Mr. Cooper, a packer in the Survey, possessed the technical knowledge necessary to compute from an aneroid registration the height of a mountain, or that he made such a computation 'at the time' as he swears?"

I simply ask your readers to compare this portion of my affidavit with what Mr. Langford here states. Here is what I say: "The aneroid given me by Prof. Hazen especially for this trip showed an altitude slightly in excess of 13,000ft.—the exact figures I cannot recall, but I made a careful note of them at the time," etc. Does this sound like "making such a computation at the time"? As to this contention about reading altitudes from an aneroid barometer, everyone knows that the reading of an aneroid is the simplest matter in the world. It is just as easy as telling the time of day by a watch. If anyone doubts this statement let him examine an aneroid barometer for a moment or two. Around the dial are figures indicating the altitude in feet, and when the observer wishes to determine his altitude he simply looks to see opposite what figures the index stands. Wherever that index rests is the altitude.

I wish to say further, in reply to Mr. Langford's charge that I am Mr. Owen's employee, that this is a falsehood. I have never been in Mr. Owen's employ in my life, nor did he offer me the slightest inducements to make the affidavit published in FOREST AND STREAM.

The statement that Stevenson had admitted to me their failure to reach the summit was made by me to Mr. Owen in the course of a conversation held about two years ago—long before this controversy arose. Later Mr. Owen asked me if I would be willing to make affidavit to what I had told him concerning this matter, and I immediately replied that I would. The affidavit, as it appeared in your paper, was subsequently prepared and sworn to. Every word of it is true.

It is a matter of utter indifference to me who made the first ascent of the Teton. In making the affidavit I have simply given to the world the truth, as far as my knowledge goes concerning this matter. Those interested may draw their own inferences. Mr. James Stevenson admitted to me that he and Mr. Langford did not reach the true summit of the Teton, but went no higher than the enclosure—which, I am now informed, is fully 50ft. below the summit. THOMAS COOPER.

CHEYENNE, Wyo., Dec. 18.

EXECUTIVE DEPARTMENT, Cheyenne, Wyo., Dec. 13.—*Editor Forest and Stream:* My attention has been called to an article by N. P. Langford under date of Nov. 7, 1898, relating to his controversy with W. O. Owen as to who made the first ascent of the Grand Teton. In this article I am referred to as probably meaning well, but incapable of remembering details of a conversation for twenty-five years. Considerable space is also given to proving that Beaver Dick, referred to in my affidavit, was not one of the ascending party. I did not assert that he was. I have always understood that Stevenson and Langford constituted the party who made the ascent at that time. I have never heard of anyone else claiming that honor. Beaver Dick said he was a member of the Stevenson and Langford party, and this Mr. Langford admits.

The circumstances of my conversation with Beaver Dick are perfectly clear in my mind at this time. His assertion that Stevenson and Langford had not ascended to the summit of the Grand Teton, as described in Scribner's Magazine of June, 1873, surprised me exceedingly. I believed the statements in that article implicitly until Beaver Dick so emphatically contradicted them. As he had been employed upon the Geological Survey and was one of the Stevenson and Langford party, his statement impressed me very strongly. I have no special interest in this controversy, but I cannot allow to go unnoticed a contradiction of my statement that Beaver Dick stated to me in 1874 that Stevenson and Langford had not reached the summit of the Grand Teton, as claimed in the article in Scribner's, which he had just read. Mr. Langford may impeach this witness, but my statement of his testimony is correct. I would suggest to Mr. Langford that he will not help his case any by insinuating that those who differ with him are untruthful. He is especially unfortunate so far as the opinion of this community goes when he attacks the veracity of Tom Cooper. All who know the man here share the opinion of Chief Justice Potter and would accept implicitly any statements made by him. WM. A. RICHARDS.

Natural History.

City Bred Woods Birds.

EVEN the most casual observer in some parts of the country cannot help remarking how entirely some species of woods birds have entirely abandoned their primitive rustic habits, and adapted themselves to the environment of civilized man, acquiring entirely new tastes, dimensions and peculiarities. This is specially notable in the suburbs of St. Louis, known as the "West End," where the houses are mainly of the better class, detached and surrounded by ample lawns with trees, shrubbery and frequent garden fountains. In numerous areas native groves of the shingle oak are retained, but the interspersing mass of foliage trees has all been introduced. Many of these are maples of different species, erstwhile grown to majestic size, some of them 60 or 70ft. in height, but whose fronds were broken off by the great hurricane of May, 1896, and rotting, left spaces and hollows desirable for nesting birds. These seem to have been incontinently pre-empted and occupied as domiciles by various kinds of woodpeckers, among which the golden-winged woodpecker, the hairy woodpecker, the red-headed woodpecker and the yellow-bellied sap-sucker are conspicuous. They are a noisy lot, and make neighborhoods tiresome with their clatter. There are bluejays in colonies, crow blackbirds, robins, wrens, catbirds, redbirds, cardinals, fire hang birds and orchard orioles, some representatives of which occupy the whole year round, becoming absolutely fearless of man, and depending in severe weather upon the sculleries for subsistence, foregathering like domestic chickens. They range all over the West End district.

The golden-winged woodpecker, which is known elsewhere as the highholder, flicker and yellow hammer, is called a "Whittaker" in eastern Carolina, because his most familiar notes sound like whittaker, whittaker, whittaker, thrice repeated. This call is varied in a most interesting and humorous manner by accentuation of the syllables, so that when a party are flocking, as they often do, among the thick branches of trees, where it is quite difficult to see them, they seem to say, "Which is it? which is it? which is it?" or "Which is you? which is you? which is you?" Often they seem to call to each other, "What cheer! what cheer! Fitzhugh! Fitzhugh!" The sap-suckers are even more colloquial, and their jaunty red caps and mottled black and white garb, as they flit from tree to tree, enliven city premises very much. The orchard oriole and the wren have several notes in common, and the mockingbirds imitate every note and inflection. The latter are not common, and I imagine are trapped for their store value. Orchard orioles are known in North Carolina as "jorees."

These feathered indigenes of the woods and groves never leave their environments of brick and mortar in the St. Louis suburbs, but have become absolutely citified. They are as much house birds as home-bred canaries. One often sees them sitting on the peaks of the "Queen Anne" roofs, where they squawk for fifteen minutes at a time at intervals of five seconds or so, varying their occupation by occasionally prodding the joints of the slated roofs with their long bills, producing a metallic sound like that of an electric bell, only less musical. Sometimes they insinuate their beak between the tin roof plates and produce leaks when it rains; so the housewives say. And the redheads bore into the telephone poles, which the grubs have attacked, and often sit on the cross-pieces and squawk or croak like frogs. Really, their vocal range is something never dreamed of by those who have seen woodpeckers only in the woods. Their movements in the breeding season are most interesting. A pair began to nest in March in a cavity of a large limb of a maple, which the cyclone had broken off short. While incubation was going on their notes were exceedingly varied, and some of them fairly musical; and after the fledglings began to take food there was always a great clatter every time the old birds brought anything, especially if the pair happened to meet at the entrance simultaneously. A crooning or purring sound was noticeable while the birds were hovering. In the course of the day, the various notes or calls which I have already mentioned were uttered and repeated from tree to tree throughout the neighborhood from one block or square to another.

Bluejays are abundant in St. Louis at all times, but especially so in winter, when they are harshly noisy scolds. But they also have musical sounds; and in Asheville, North Carolina, where I passed last summer, in a delightful post oak grove one of the most mellifluous morning bird notes was their "tweedle, tweedle," projected from their high perches among the limbs. At St. Paul the whisky jack and bluejay winter, usually; and it was there I first detected their musical capabilities. Though but a few individuals stay to face the boreal rigors; for on Sept. 12 I noticed how they congregated at Lake Como in large numbers in company with hosts of robins, catbirds, thrushes and other birds, which I ascertained left for the south two days afterward, when the first cold snap came, and I took occasion then to ask several of the park attendants whether they had noticed the bluejays harassing the smaller birds at any time, or stealing their eggs or young, and they all fully exonerated them from this stereotyped malicious charge. The ways of the jay in St. Louis are very different from his habits in the East; and naturally so. In the East he is regarded as a rascal, while in the Middle West he is a familiar friend. He is quick to see the advantage of living about the house if he can do so safely. I need not say that I rejoice, for I believe that the song birds were made to bless our lives, and the insectivorous birds to contribute to the service of man. And I am glad to see that all the foregoing birds, though noisy, are growing in public favor, and I hope they may all live unmolested wherever they are.

CHARLES HALLOCK.

FAYETTEVILLE, N. C., Dec. 17.

The Starlings.

BAY RIDGE, N. Y., Dec. 7.—*Editor Forest and Stream:* Since my first notes anent the starlings appeared in your columns, I have continued carefully to observe this most interesting addition to our avifauna.

Shortly after the young birds were launched into the world the whole tribe seemed to give themselves up to a season of gaiety.

Toward the latter part of August our local residents received large accessions to their numbers, both of young and old birds, the young largely outnumbering their elders. The first week in September there were hundreds of them about. On Labor Day I counted 173 in one flock feeding in the grass under the trees.

Again and again they would rise like a bevy of quail and take short flights in the open, performing most graceful evolutions, turning and wheeling as one, sailing back into the trees, from which they dropped in twos and threes, to resume their feeding, until the grass seemed to heave in spots with birds, as they ran and crept about in close touch, like a flock of sheep.

While holding aloof from our native birds in the main, they did not object to the society of a body of about fifty grackles, who fed with them day after day. When the impulse for aerial evolutions seized the starlings, who rose with a sudden whir of wings, it was amusing to see the grackles. Every grackle hopped awkwardly in surprise, and with upstretched neck seemed to say, "What in thunder is the matter with those fools?" Then they would feed again, till presently the starlings returning, the grackles would peck at them, and fuss about in seeming expostulation. At irregular intervals the repetition of this scene afforded much amusement.

Flocks of fifty to one hundred starlings were common in this vicinity all through the fall. The large flock above referred to kept in close range during many weeks, affording me ample opportunity for study. During the middle of the day if the weather was fine I often saw long strings of them preening on the telegraph wires; they were always snuggled close like swallows, not in open order.

By the middle of October their numbers were greatly thinned. By Nov. 15, with the exception of those couples that had nested with us, they had left. At the present writing these latter only remain.

These birds, being newcomers among us, are most interesting to observe. They sing the season through. Even our late cyclones have not served to dampen their ardor in this respect. No later than yesterday I heard and saw them, high among the bare boughs. I have grown fond of their peculiar twittering song, with its occasional flutings.

Insects formed their principal diet during summer; wild cherry, dogwood and other berries during the autumn. What they subsist upon at present is past my finding out, but subsist they do, and are in apparently good spirits, as evidenced by their songs.

During fierce weather they shelter in the old nesting sites, and I suspect these are nightly occupied by them. Our pestiferous English sparrow is at a discount with these birds. I never saw such complete indifference shown by any bird as the starlings manifest toward these wretches. Will not some of your correspondents furnish notes on the starling? Have they gone South? Where are the large flocks that were with us three months ago?

WILMOT TOWNSEND.

[Starlings are scattered about New York in a number of places, and everywhere seem to be popular. They appear to interfere with no other birds, but to devote themselves wholly to the main business of life—the work of getting a living. They are cheery fellows too, and on gray days of last November a small flock of which we have knowledge were heard singing away in the branches of a hickory tree like so many robins. Individuals of this flock are believed to have nested in a church steeple near their feeding grounds.]

Albino Squirrel.

PHILADELPHIA, Dec. 12.—*Editor Forest and Stream:* The article in issue of Nov. 19, "A Red Squirrel Turned White," recalls the fact, that during my late camping trip on the west branch of the Penobscot, Maine, I shot a perfectly white squirrel, having pink eyes, and in fact all the characteristics of an albino.

J. J. KIRKBRIDE, M. D.

Game Bag and Gun.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Day with the Grouse in Putnam County.

The Actual Experience of a Novice in the Hunting Field.

"Is there any grouse shooting near New York?" asked a man who was calling on a young hunter at his home uptown the other evening. "Is there? Well, I should say so," was th ehost's reply. "But you have to know the ropes so well and there are so many obstacles that I should think that it would hardly pay to try to get a day's sport within at least 100 miles of the city," said the visitor. "That's partly true," rejoined the sportsman. "By the way," added he, "do you want to know about my first day's shooting with a dog? Well, I was sitting at my desk in the commissioner's office, Department of Public Works, one morning, when a jolly, stout man from Brewsters called to see the Commissioner. As Mr. B. was over at the Mayor's office at the time, I tried to entertain the gentleman from the Croton watershed, and after a while led up to my favorite topic with this question: 'Are there any partridges up your way, Mr. A.?' 'Lots of them,' said he. 'Now you come up Friday and I'll see that you have a good time.' 'But I have no gun,' I pleaded, 'and besides that, I am not a wing shot. I am pretty handy with a gun, but hardly up to your form.' 'Well, you just come up on the Harlem road. Take the 5:45 a. m. train and you'll be just in time. I'll get you a shooting iron.'

"The Commissioner now returns and is asked if his young man may go shooting. He kindly gives consent and the matter is settled. I had a fever all day. To add to my excitement, I found a telegram in my room at the San R. Hotel when I got home from business. There it is now under those grouse tails on the wall. Let me read it: 'Saturday will be the best day, and you will be sure of a bag. E. W. A.'

"It was frightfully cold weather at the time, and there was no snow. I worked for an hour before retiring, laying out clothes, etc., for the next day. It was my first chance to hunt with a real wing shot, and I was determined to be dressed just right.

"In the midst of dreams about whirring grouse, shotguns and 'tight shells,' I was aroused by the faint glimmer of a dark lantern. A big, burly figure was cautiously tip-toeing through the apartment, and I was about to cry 'burglars!' when a kind hand was laid on my shoulder and the voice of the faithful night watchman whispered: 'It's 4:30, sor; wake up now, plaze.' I choked out some thanks, and gave the honest fellow a whole handful of good cigars for his thoughtfulness."

"But what was your costume?" asked the guest. "I may want to copy it." "It was unique," replied the young sportsman. "I wore thick, gray trousers and woolen drawers, putting on a Balbriggan undershirt instead of a heavy one. Over this came an unstarched Madras shirt. I then donned my thick corduroy vest, and over all drew a rather light sweater, allowing all the garments to go inside my trousers, which were supported by heavy elastic suspenders. Protected in this way, I got into a double-breasted cheviot coat, put my canvas shooting jacket in a travelling bag and started. I felt so light and comfortable in the costume.

"You have never taken an 'L' train at 5 o'clock? It is an experience. Both the ticket seller and his assistant were nearly asleep, and my only companions in the car were two laborers going to their distant work. Their faces plainly showed what they thought about being forced from their beds at such an unseasonable hour. The miles I covered and the fatigue I underwent that day would have killed either of them, but I must not anticipate. At Forty-second street I arrived and sought food. Fortunately the 'Owl' stood there, and I made haste to climb into that hospitable little hotel on wheels, where I had a bite, and was soon on the train. My costume attracted no attention until the heat compelled me to get out my cool canvas coat. The good world esteems a gentle sportsman, angler or lover, and so I got nothing worse than a few kindly smiles.

"A little knot of friends awaited me at the station, and I was taken into Judge T.'s office, where a good gun, an L. C. Smith hammer, double-barrel, and a pair of hunting boots awaited me, his Honor having despatched a boy to bring in a piece of suet to fill up the seams in the footwear. Here I met an erect, soldierly-looking man, who looked Western. His name was Frank Townsend, and a better sportsman I shall probably never meet. With him were a Mr. Yale and a bright boy of 16, who is devoted to Frank and spends as much time at his farm up there as he can spare from his school and his Fifth avenue home. 'Here comes the team,' says some one, and a span of blacks attached to a three-seated wagon came sweeping up to the door. Into it climbed the youngster and Mr. Yale, while Frank and I got in Phil, the pointer, and coaxed his little black sweetheart, Phœbe, into the rear of the wagon between us. The guns and hampers of provisions are handed in and off we go, Phil beginning to sing and Phœbe ready to jump out of the wagon in her excitement. Passing along some clear streams that feed New York's water supply, we halt at a farmhouse about three miles from the village and put up the team. The party then divides, Frank taking me in charge. We cross a bit of stubble and enter a piece of woodland. 'They are pretty scarce around here,' says my guide, 'but we may get one.' Up and down the ridge among the chestnut trees, now denuded of their leaves, we stray. Phœbe ranges right and left, but there is no sound of wings. I use my knowledge as a still hunter, gained in the Champlain Valley, and suggest a course down by a small pond, saying, 'They'll be down in moist ground today, where it is warm.' We get into an old road and start through a little pass between some rocky hills. There are witch-hazel bushes and a few blackberry thickets here. Phœbe is working ahead from side to side, but has found no trail yet. Frank is close up to her, and I am about 20yds. behind, when up goes a big brown bird from a clump of weeds at the right and flies straight away from us. I shout to Frank and forget to use my own gun at all, after the usual fashion of my kind. The grouse is within 30yds. of my companion. Bang, bang! goes his double barrel. The bird writhes after the second shot, but turns to the right and flies straight up to the ridge, and I follow his course for perhaps 50 rods way up among the treetops. 'What a long flight. He must have been hit,' I remark encouragingly. 'Yes,' says Frank, 'I covered him all right both times. It was a dead easy shot, not a bush in the way either, but, man alive, why didn't you shoot? He was your bird too.' I confessed that I wasn't ready, and didn't feel like interfering with his shooting, as I was sure that he would make a hit. 'Now, see here,' said my instructor, 'the next time a flyer gets up on your side, just hold right on him and blaze away. That's the only way to learn. You smashed those cans I threw up over there by the barn all right. So just keep your gun ready and let 'em have it. If you had fired, I'll bet we would have that big fellow now.' Well, I promised to do better, but had a desire to get just one glimpse of a black ruff sneaking among the bushes. I should have known what to do.

"How we looked for that bird! We covered all the territory for rods around the place of his disappearance, expecting every minute to have Phœbe bring in the game. After half an hour wasted in a fruitless search Frank concluded that the grouse had flown straight over the fields and had dropped dead. So we started on another course. Phœbe occasionally brightened up a little, but failed to raise a single bird. Finally I said: 'Frank, let's try the warm hollows again. There's a likely place down by that little brook.' We cross the fence and stroll down the road for a few rods. Suddenly Phœbe takes some interest in things. She comes to a point in some low bushes near the stream. Her master steals up carefully, and I hear: 'Mark bird.' 'All right,' said I. Down the swale we go. This time I am ready to shoot, although very distrustful of my skill. Phœbe draws up, and with a rush a gray object goes straight down the little valley. I have only one glimpse of whirring wings, and have no chance to try my luck, but the quick pop of a smokeless cartridge is heard, the flight ceases, and I hear the cheering words 'dead bird.' In my excitement I run over the dog, so fearful am I that our first prize may escape. Phœbe gives me a look of evident disgust that plainly says 'Get your old game, if you want to.' Our bird is only winged, and I have a chase through the rushes, aided by the setter, now quite over her resentment. We now range about for a while without any result; and I am secretly hoping for a shot at a hare or even a gray squirrel. The woods seem to be absolutely devoid of any living thing, so we return to the stable, where our companions, groaning over their bad luck, are taking luncheon, using the floor, covered with a sleigh robe, as a table. As I carry the game it is concluded that I am the lucky one. This delusion is promptly fostered by Frank. Taking the advice of the boy hunter, we drive to a piece of woods fully four miles distant, and tell the reinsman to meet us at 5 o'clock. We cross a brook containing some trout, and climb a wide slope thickly grown with chestnut and oak trees. There are lots of likely looking brush heaps, and at the top of the hill is a pasture separated from the copse by a mossy stone wall. On the left are empty meadows and a buckwheat stubble. At the end of the wood, which we search in vain, two slight slopes include a swamp of scrub oak and thorn apples. Here we may get up some woodcock. As we approach, a big grouse flushes wild 50yds. off, and goes up along the swamp fence, alighting on the dry ground above. We now hear our friends' guns from a distant quarter and walk cautiously forward, while Phœbe's inquisitive muzzle is poked into every thicket and tuft of swamp grass. There is nothing in the marsh, so we take to the dry slope, where the small oaks and bushes form a good cover. Suddenly Frank exclaims 'Look there!' Sure enough, the little black 'un is pointing. Her form is stretched out to its full length, and her lithe body is trembling with excitement. 'Now, Pete, watch right and I'll go left,' said my mentor. 'That bird will fly your way.' The dog is standing near a small pine. Thick brush are all about, but just ahead there is a little clear space. A sharp 'Look out!' comes from the left, and there is a whirr of rushing wings. I am straining my eyes for a start, my gun at the shoulder covering the little blue target. Something crosses the line of sight. I press the trigger and the object wilts. Frank is afraid of my shooting and fires his right barrel an instant later. 'Your bird,' he says, kindly. I have my secret doubts, of course, but hope for the best. Where can our game be? It pitched off a cliff 30 or 40ft. high. I descend, but find nothing. See Phœbe. She stands on the edge, pointing straight down. I return to my search, and in the angle formed by two rocks there is Mr. Grouse, only slightly winged, I think, but my companion shows other wounds and adds: 'See, No. 6 shot, too. Mine are No. 8. That proves what I said. You have "wiped my eye" the first day. Pretty good for a pot hunter. Now let's beat this place up. I think there are a lot of 'em here.' We turn down an old wood road, while Phœbe works along to the right. We are busy talking, when up go two birds in front of Frank. They are brought down beautifully. I step forward and get an easy shot at a young one following. Another grouse flies away ahead and alights on a tall dead tree, but puts off again as we approach. Here my wish is nearly gratified. A big white hare, frightened by the dog, dashes across a little glade. One of my favorite marks, too. I score a clean miss, however. Not so Frank. He runs to the right, and as bunny makes his characteristic turn, he is dropped with the right barrel. 'Ah, now, Sonny,' says my tutor, 'we are now even. I gave you a white handkerchief that time, sure.' Two shots in rapid succession indicate the approach of our friends, and three birds driven up from the swamp settle down nearly within range. We creep up to the first one. Frank lets me shoot it, but it takes both barrels to do so. I am shoving in the last cartridge, when I hear his spiteful little 12 talk. Two birds are up. He drops one with his second charge, but the other, a wily fellow, has put a thicket between himself and Frank, who shouts 'Take him! Look out!' I get a bare glimpse of something about the size of a robin flying just over the brush, fully 40yds. off. I take the best aim I can under the circumstances and stop the flyer with a 30in. circle of No. 6 chilled shot.

"Our numerous reports have attracted the attention of the other party. It comes up to gratify natural curiosity. Mr. Yale 'hefts' my pockets in a patronizing manner, and pulls out two or three nice birds from his own to show. 'Pretty free with your powder, I hear,' said he. 'Well, that's the way to learn, isn't it?' 'Oh, I don't know about that. We have to pile ours up. Pockets won't do, you see,' replied I, pointing to a few brace of grouse and the big white hare that we had been to busy to care for properly. 'Had to throw them down there in the road. You gentlemen kept us pretty busy, and as beaters you are certainly hard to beat.'

"I shall never forget that scene. We stood at the forks of an old road in a little valley among the hills. Overhead hung the cloudless sky and hardly a breath of wind was stirring. All were making plans for the route homeward, the two dogs being included in the confab, when an old cock grouse, which had been skulking behind a large oak, suddenly got up with a roar behind Frank and flew down the path. That worthy was ready and fired twice without apparent effect. We could see the bird come to a thickly wooded knoll, nearly one-quarter of a mile distant. He then abruptly arose to the top of the hill over the tall trees—an unusual course, we thought—and pitched over the elevation out of sight, while Frank rather fretfully remarked, as he resumed his task of stringing the game: 'I can never hit a pa'tridge that gets up behind me and flies over my head. Well, you fellows go up over the hill after that bird, and Pete and I will take your trail back through the swamp.' We accordingly walked through the low ground and came to the place where we saw the first grouse. Thinking that he might have come back, we covered the woods well, keeping close to a mossy stone wall. We had nearly decided to go home, and were about to cross the fence. Frank was 20yds. ahead with the dog, while I followed, a little toward his left. Phœbe passed to the right of a big maple and was hastening on, when a handsome red grouse flushed between tree and wall, and started back to the swamp over the smooth sheep pasture. Frank heard the noise and made a beautiful turn shot, killing the bird with the nearest, neatest and prettiest shot of the day.

"We overtook our friends about ten minutes later, and they had a fresh bird, which we couldn't account for, as we had heard no shots fired. It came out later that this was the grouse that took the long flight over the hill. Phil had picked it up in the pasture, nearly a mile from the forks. I won't tire you, old man, with many more details. A nice supper was ready for us at the hotel, and we sat about the fireplace in the office until late, telling stories about the day's adventures. The two tired dogs were sound asleep on the floor, and from the mantle shelf hung a noble string containing fifteen nice fat birds. And I must take them all home for my friends' Thanksgiving dinners. Now and then some smart fellow came in and walked up to see if the game had been snared. He would feel of their necks knowingly, but finding his hands stained with blood, would retire rather sheepishly from his examination, and our reputation as sportsmen was safe. Well, to wind up, I got home all right, and my neighbors in New York said that even Putnam county grouse were not bad on Thanksgiving Day."

PETER FLINT.

"Yellowstone Park Poachers."

Editor Forest and Stream:

In the number of FOREST AND STREAM of July 16 I saw an article with the above heading. I read it with much interest, more so from the fact that I was one of the party of innocents of whom the article partly treats, and one who by chance was delegated to assume the active part of the play in connection with the game scouts, Scott and Malin. I am led to reply to this article from the fact that, while it has been evidently written by one who is no doubt familiar with the entire workings of the Park, and who in fact bears the "ear marks" of an army officer who has been located in the Park for some years (I understand he has been transferred), it contains so many misstatements, and is so manifestly unfair, that I feel compelled to take up the pen to correct that portion of the article which I know to be otherwise than stated by its writer.

Our party, consisting of five men, and having in view first a visit to Yellowstone Park, and second an elk hunt in Montana, entered the Park Oct. 7, 1897, via Livingston and Cinnabar. At Cinnabar our party was met by Col. Watters, who owns the steamboat on Yellowstone Lake, whose guests we were while in the Park, and who, with his private carriages, made the tour of the Park and entertained us at his private residence on the shore of the lake.

On our way in we stopped a short time to conform to the rules of the Park, and to pay our respects to the Superintendent, then Col., now Gen. Young. The General was found to be a most courteous gentleman, which, I am glad to say, most all of our army officers are. He said he had received a communication from Washington regarding our party, and would be pleased to furnish us anything the Park contained or aid us in any way to make our visit there enjoyable. We wanted nothing, however, but permission from the General to bring our game and trophies through the Park on our return. This he granted.

That part of the article in your July number saying we were allowed to take our guns through the Park to Patt's place was a mistake. We understood before we started from the East that guns could not be taken through the Park. We expressed them over the Union Pacific road and Oregon Short Line to Monida, Mont., thence by stage to Lake Henry, Idaho, and by private conveyance to Patt's ranch in the Madison Basin.

When through the Park, Patt met us at the Upper Basin, and took us through the Fire Hole River route to his place, about five miles outside the Park limits. There we outfitted for our hunt, and Patt, not having the necessary pack outfit, engaged Jim Courtney and Dick Murry to help him, they furnishing some of the horses and other paraphernalia.

Murry did not want to come, as he had just returned from a hunt, and his horses were worn out and not fit for service; in fact, one did give out when several days out. Patt finally induced him to come. Of these men we knew nothing—Patt included, as he had been en-

gaged by one of our party, who had been located in the Madison Basin several years before.

We went from Patt's to the Wickieup country, northwest from Patt's, staying there three days, our party getting two bull elk. The game having moved out on account of the last storm or some other cause, we decided to break camp and go to the Gallatin Basin, near the northwest corner of the Park.

The weather having turned cold, at night skirmishing near if not a little below zero, two of the party decided, having killed their elk, that Patt's ranch would be more congenial, and not so "congealial," and pulled out, and Patt, Murry, Courtney and the three tenderfeet started for the Gallatin.

We struck the Gallatin Basin about a mile within the Park limits, Patt having been turned around in some rough country and cañons we struck, and getting lost came out three or four miles higher up than he had calculated. We made tracks out of the Park without delay, and on our way out Patt called attention to the Park line on the west, a place called the Burnt Horse Corrals. We also saw a trespass notice.

We established our camp about three miles below this point, where others had camped before us. We had warned Patt and the other guides that we wanted the greatest caution used in keeping away from the Park, and under no circumstances to get near or across the line. Before starting out next morning, Tuesday, Oct. 19, to hunt, Patt showed us where the Park line ran, and said, "As long as you keep west of this side of that stream (pointing to a tributary of the main fork of the Gallatin River, coming from the north) you're all right; but don't cross it!" Nor did any of us ever do so.

On Wednesday, the 20th, one of our party got a shot at a big silver-tip bear, wounding him. As it was late in the evening, they did not follow him far, but next morning the entire party took the bear trail, and followed it until about 2 o'clock in the afternoon, when, seeing there was not much show of coming up with the bear, Patt and one of the party left, and returned to camp. The remaining four, coming to a fresh trail of a band of elk going south, left the bear trail and followed the elk. We overtook them in the course of an hour. One of the party shot at one of the rearmost elk; this stampeded the band, which turned and ran southeast toward the Park line. We followed them for quite a little distance, probably one-half or three-quarters of a mile, and when so near the band that Murry's dog winded them, and was with difficulty kept in, Murry said, "Boys, those elk are going straight for the Park, and while we might overtake and get a shot at them, it won't pay to take the risk. We will let them go." And we did, turning short off to the southwest toward our camp.

Within a half-hour we were overtaken by the two scouts, Malin and Scott, who, introducing themselves, informed us that we were within the Park limits, that we could consider ourselves under arrest, and that we would start for the Mammoth Hot Springs headquarters at once.

All hands at once protested, and disclaimed any knowledge of being nearer the Park than at least two or three miles. The guides and scouts compared compasses, and as the western Park line is or was at that time only a surveyed line, and not even blazed, the dispute waxed warm.

Finally I proposed, as it was nearing evening, and we were hungry, and had nothing on but light hunting clothes, no coats nor blankets, and as we could not make the Springs that night, that we would consider ourselves under arrest, go to our camp, get filled with good "chuck," stay all night, and start next morning for the Springs and our doom. This proposal the scouts accepted, and without any risk, as the guides were not armed, and we two tenderfeet were so badly scared that we never thought of resisting, and could not have hit a county four feet away with a shotgun.

At the camp after supper it was arranged that I, as a representative of our party, with Murry and Courtney, was to be taken to the Springs in the morning. Patt and the other dudes were to take the outfit to Patt's place, get the rest of the party, and all hands were to meet at the Springs and fight the line business out before Gen. Young.

After arriving at the camp, both Malin and Scott acknowledged that we had our camp outside of the Park lines. The compass contest was on again, and Murry offered, as did Patt, to take them up to the Burnt Horse Corral and show them the line as it was understood by the public generally; also the trespass notice on the line. The scouts refused to go. They both admitted that the boundary line was vague and not plain, nor fully understood by any one.

During the evening I was called out of the tent by Malin and Scott, and asked who Murry was. I told them. Patt was known to them. They did not ask who Courtney was, nor did I mention him, but a little later Scott said in confidence, "We know who the other man is." They evidently had never seen Courtney before. "He is Jim Courtney. We do not care about getting Murry, nor do we want Patt, but, by ——, we are going to take Courtney if we kill him. There is nothing against Murry nor Patt, but we do want Courtney, and we are going to take him."

I hoped there would be no difficulty, I said, and soon after we entered the tent.

As the article in the FOREST AND STREAM number states, a violent storm arose that night and continued nearly all day Friday, compelling us to remain in camp. The scouts remained. Murry and Courtney had given up the idea of convincing the scouts that we had not been trespassing, and had evidently formulated a scheme for themselves, although they did not give any of us a hint.

On Saturday morning it had cleared. They went out, roped their horses—and only theirs—brought them up in front of the tent and saddled them. Courtney before that in the tent had taken his Winchester and filled the magazine. Murry had no arms with him. And when they got ready to mount Courtney found he had not taken the hobbles off his horse. He stooped to do so, holding his rifle between his knees under his horse's belly and facing the two scouts, who were standing 30 or 40yds. off.

Scott spoke to Malin and started toward Courtney, who was yet unbuckling the hobbles, at the same time reaching his hand for his pistol, and grasping it, walked a few steps forward and stopped. Courtney watched them keenly, but made no sign, though I've a dim suspicion that the Winchester was cocked, and Courtney has the reputation of being a crackerjack with a gun.

Courtney got the hobbles off, swung into the saddle and he and Murry rode away without a word.

A few minutes later the scouts expressed the belief that Murry and Courtney had skipped, and we agreed to it.

The chief prize having escaped, there was no use of drawing the net for such a small fish as me, so we agreed and obligated ourselves, Patt also, to meet at Gen. Young's quarters at the Springs on the following Wednesday. It was not difficult, as the guides gone, our hunt was ended. We broke camp, the scouts good-naturedly helping us to pack, and with expressions of good will all around we parted. They took with them Courtney's mule.

We pulled into Patt's ranch that evening at 7:30 o'clock and found Murry and Courtney there a few hours ahead of us. We tried to induce Murry to go with us, as there had been nothing against him previous to this; but with good reason he objected, saying, "I'm not afraid to go, and I'm sure Col. Young would do the fair thing about the matter, but I have been out with hunting parties all summer. I have no wood for the winter; no meat. I have all my work yet to do, and snow is already upon us. I can't afford to lose the time to go, but the first chance I get you can bet I'm going over to the Park to see the Colonel."

Nothing was said to Courtney, as we knew he would not go, and we knew from recent events that the Park authorities had it in for him.

As per agreement, we were at the Springs. We arrived on Tuesday and stayed until Wednesday at 10 o'clock; called on Gen. Young, and explained matters; were kindly treated, and courteously excused from awaiting the arrival of the two scouts, who had not as yet reported, and whom we did not again see. Thus ended the first chapter.

I had no knowledge of the particulars of Murry's visit to the Springs, as he merely wrote me that he had gone there, had had a hearing before the Commissioner and had paid a fine of $50 as the easiest way out of it. I therefore waited until I saw Murry last September and October, when he acted as guide for our party in a hunt in Wyoming. His version of his visit to the Park headquarters differs materially from the article in FOREST AND STREAM, and is as follows:

"I went to the Park headquarters last June, being in that vicinity, and having with me four horses. As the rules required, I went and registered, and was not sent by the guard, as is stated in the article in FOREST AND STREAM.

"I asked the man in charge of the office if the Superintendent was in. He replied that he was in his office. Since Gen. Young was transferred, Lieut. Cress has acted as superintendent, and it was that officer I expected to see. He was not at the Springs, however, on that day, and I was surprised on entering the office to find Lieut. Lindsey acting as superintendent in the absence of Lieut. Cress. Had I known that he—Lindsey—was to hear my case I would not have called.

"I told him my errand, however, and after some conversation he told me I could consider myself under arrest. He placed me in charge of the guard, who put me in the guard house, where I remained over night.

"In the morning United States Marshal Morrison came to the guard house and showed me the warrant for my arrest. We then went before Commissioner J. W. Meldrum, who gave me a hearing. I fully expected to be met at the Commissioner's hearing by Lieut. Lindsey, and have him make a charge against me, and be given a chance to defend myself; but he had evidently made his charge the evening before.

"I told the Commissioner I wanted to find out, if I was judged guilty of trespassing, what was the easiest way out of the difficulty. He replied that he would fine me $50, or I could refuse to pay, enter bonds and stand trial at Cheyenne at regular term of court. As that would require me to go from the lake to Cheyenne, to lose a great deal of time and to be under considerable expense, I decided that the payment of $50 would be the cheapest in the end. Not having all the required amount, I left one of my saddles as security. I was accompanied by a trooper as far as River Side Station, which is nearest the lake.

"I did not express surprise at the lightness of the fine imposed to the deputy marshal, though, considering the fact that Lieut. Lindsey made the charge privately, I'm surprised that I was not hung.

"I did not admit before the Commissioner, nor will I ever admit, that I was a trespasser in the Park, as charged. I paid the $50 fine under protest—and only paid it then, seeing that I was in the lion's jaws, and the easiest way out was the best."

This was Murry's statement to me. I do not profess to understand the merits of the article relating to the action of Mr. Clark, U. S. Attorney at Cheyenne, but I presume he acted in the matter as his best judgment dictated, and in this case I think right, notwithstanding that the gentleman who wrote the article evidently thinks that the balance of virtue and brains is or was centered in Fort Yellowstone. And yet I have heard one gentleman say he knew of one case, when he visited Lake Henry, where officers of Fort Yellowstone assisted in killing wild ducks at that point in such numbers that they could not be used, and the slain ducks drifted to shore and were buried in a trench by a man hired to do the work! How is that for conscientious game protectors?

Every man with whom I have talked in Idaho, Montana and Wyoming, including these two "violent desperadoes" Courtney and Murry, says that the Yellowstone Park is the salvation of the big game in the West, and is of immense value to all three States named.

And in closing this rather lengthy explanation and history of our past in the matter, allow me to say a few words regarding the personality of one of these men, Dick Murry.

I have twice been on hunting trips with Dick Murry; have been with him in sunshine and in storm; when things were going right and things were going very wrong; when pack animals were going along like lambs and again when these same lambs were sending their heels and loads heavenward and in all other directions; when a good many of our hopes were sailing toward Mars, and I have yet to see him lose his head or temper. The same good-natured, pleasant Dick, in the morning or at night; cool-headed, resourceful at all times, doing the right thing at the right time; no blow; no boast. The pronoun I is almost unknown in his vocabulary. His word I have found is as good as his bond. Of all the guides I have hunted with, and I have hunted for the past twenty years, Dick Murry is the best hunter, and the most reliable.

He always does more than he promises, a rare virtue in a guide, who, in a majority of cases, are inclined to lie down on you. He is a pleasant, frank, open-faced fellow of about twenty-six or twenty-eight years; neither chews nor smokes tobacco, nor drinks. Has a little ranch on the shore of Henry Lake, Idaho, making his living as a guide and hunting and fishing. He has assured me on his word that, for the past five years, he has never been in the Yellowstone Park except on legitimate business, and I believe him; yet I am satisfied that, if he did want to go in, all the scouts the Park employs could not keep him out.

In speaking well of Dick Murry, I have no "axe to grind," as the next Congress will, no doubt, take in the country we have hunted in, and I shall hunt no more with Dick; but the remarks I have written here will be indorsed by every one of our party on both hunts, and if the editor of FOREST AND STREAM had the opportunity to talk with him half an hour, and was not favorably impressed with the man, I would set up a dinner at Delmonico's for the party.

And this is the kind of a man the writer in FOREST AND STREAM would have its readers believe is a poacher and a bad man generally; and while not knowing who he is, I'll wager dollars to cents that in character, and in everything that goes to make a man, Dick is a royal flush to his one pair of duces, and this will be backed up by all who know Dick. He is one of nature's gentlemen, and as that all that can be said.

No one takes more interest in measures looking to the protection of game of all kinds, all over the United States, and admires and applauds the efforts of FOREST AND STREAM, as also all sporting journals, to that end than myself. I have been a constant reader of all the best sporting journals for the past twenty years, and am glad to notice they are in line on protective matters, and hope the coming Congress will take in all the country south of the Park to Jackson's Hole. I have hunted in it, and it will make the grandest game preserve in the world. Then let our kind Uncle Sam send a goodly number of his nephews; let them cut a wide swath where there be timber, and in the open country plant posts conspicuously placed, so that "Those who run may read," and those who hunt may see. Let the penalty of trespass be a pack-horse load, and let him who sins suffer the consequences, and no one cay say, "I understood not."

ONE OF THE INNOCENTS.

Proposed Colorado Law.

DENVER, Colo., Dec. 17.—*Editor Forest and Stream:* I enclose herewith a copy of a game law prepared by me and which will be introduced in the Legislature of this State at its coming session.

I sent you a copy of same some days ago. This bill is the result of some years' labor in the effort to have it consistent with itself, and clear enough on every subject to require little or no construction. Its leading features are:

1. To afford more adequate protection to game and fish belonging to the State.
2. To enable one lawfully killing such game or fish to utilize the same to the fullest extent consistent with the first proposition.
3. To clearly indicate when game and fish of every character may be transported, stored, sold and used.
4. To procure funds for the enforcement of the law from those receiving the chief benefits.
5. To encourage private propagation of game and fish and to permit the sale of the same under proper restrictions.
6. To provide a method whereby paramount industries may be lawfully operated.
7. A short open season for elk.

Suggestions and criticisms tending to perfect it will be carefully considered.

I also enclose a synopsis of the provisions of the act made in as brief a form as possible to give anything like a fair idea of its scope. I thought you might be willing to publish the synopsis, as there are some features entirely new, and as I think, valuable.

D. C. BEAMAN.

Synopsis of the Proposed Colorado Act to Protect Game and Fish.

Division A.

DEPARTMENT OF GAME AND FISH CREATED—GENERAL PROVISIONS.

Appointment of State Game and Fish Commissioner authorized; he to appoint and keep in service five chief wardens and ten deputies; also special wardens without pay; the usual power given to the commissioner, wardens, all officers and Government timber officials to enforce the law by search, seizure and arrest of offenders.

All game and fish declared the property of the State, and taking, killing, possession and sale forbidden, except as permitted by the act. All game and fish must be accompanied by a coupon, permit or tag as provided in the act, or the possession is unlawful.

Commissioner may replevy in name of State game and fish unlawfully held, and sell the same, and no bond in such case required.

Division B.

OPEN SEASONS, NUMBER AND QUANTITY.

No open season on bison, mountain sheep, beaver, pheasants, quail, ptarmigan or fish 6in. or less in length.

Evidence of sex must be retained on deer, elk and antelope as long as any considerable portion of the carcass remains. Fish caught must be immediately killed, unless intended for preservation alive.

The following is prohibited: The use of game for bait-

ing traps; nets, dynamite, poisonous and stupefying substances, snag hooks and trot lines in fishing; killing of quadrupeds not suitable for food on account of rutting; night hunting and use of steel or hard-pointed bullets, or anything but ordinary firearms in hunting and killing of elk, deer or antelope not having horns.

Permitted: The use of dogs, blinds and decoys in hunting birds only.

Open seasons: Deer and antelope, Aug. 15 to Oct. 31; elk, Oct. 15 to Oct. 31; turkeys, sage chickens and grouse, Aug. 15 to Oct. 31; water fowls, Sept. 1 to April 15, except in altitudes over 7,000ft., where season does not begin until Sept. 15; pigeons, doves and curlews, July 15 to Oct. 31; fish, June 1 to Oct. 31.

The taking of game and fish limited to food purposes and to twenty-five birds and 20lbs. of fish per man per day, and no more than fifty birds and 40lbs. of fish in possession at any one time; one elk, one deer or one antelope only per man in one season. Five days after close of open season allowed for transportation and use.

Division C.

HUNTING LICENSES.

Every hunter must have a license, either county or State. County license issued by commissioner or county clerk on blanks furnished by commissioner, fee 75 cents, good for hunting in county only. State license issued only by commissioner, fee, $5. No discrimination against non-residents, and authorizes hunting in all counties. Licenses good only for one year, not transferable; procurement of more than one forbidden and renders both void. Each license must state name, age and residence of licensee and bear his signature; three coupons attached to each license, one for an elk, one for a deer and one for an antelope. When such animal is killed the proper coupon must be dated and signed by the licensee, and attached to the animal, and so remain as long as any considerable portion is unconsumed, and kept attached to head, horns or hide if preserved. License must be shown on demand of any officer. All licenses must be accounted for by county clerks, and those not used returned to the commissioner, with one-third of the fee received therefor. Every license and coupon is numbered and bears the written or lithographed signature of the commissioner, and no others are valid.

Division D.

GUIDES.

Every guide must be licensed; fee, $5. He must also have a State hunting license. Guides must report to commissioner as to number of persons guided and game and fish taken each year.

Division E.

PARKS, LAKES AND PRESERVES.

No game or fish shall be kept in any park or lake, public or private, unless the same is licensed. Licenses may be for two years or ten, and the fee is from $10 to $100. Fee not required for parks or lakes controlled by a municipality, and to which the public is admitted free. Parks and lakes wholly or in part on private land are Class A, and the proprietors may kill and sell game and fish at any time of year on attaching thereto an invoice showing number of license and name of consignee, which authorizes transportation, use, etc., for thirty days only. Copy to be mailed to commissioner. If such parks or lakes contained any game or fish belonging to the State the aggregate number must not be lessened by killing or sale, and the State shall be entitled to 10 per cent. of the natural increase of game and of fertilized fish eggs each year to stock other parks and waters. Permits to add to game and fish in parks and lakes by capture can be procured of the commissioner in proper cases, also to exchange for game and fish from other States.

All invoices must remain attached to the game and fish until prepared for consumption, and then kept thirty days, or delivered to commissioner on demand.

Parks and lakes wholly on public land can only be licensed when the protection of game and fish will be advanced thereby, and in them the public may hunt and fish for a compensation, to be fixed by the commissioner. half to go to the State and half to the proprietor, but no game or fish can be sold therefrom, and hunting and fishing therein is subject to the restrictions as to seasons, number and quantity, in Division B. Such lakes are Class B.

Bird shooting privileges on lakes and fishing privileges on streams on private land and leased from the owners by clubs and others are called preserves, and must also be licensed, fee from $10 to $25, but hunting and fishing therein is subject to the restrictions as to seasons, number and quantity in Division B.

Division F.

TAXIDERMISTS.

All taxidermists for hire must procure licenses for one or ten years, fee $10 to $25. The commisisoner is required to immediately examine all specimens and affix a tag to each without charge if lawfully held, otherwise may charge $1 for each tag or confiscate specimen.

No specimen of a game quadruped to be hereafter mounted unless it has a proper hunting license coupon attached. In case of loss of coupon proven, commissioner may furnish a duplicate. Scientific societies may also be granted permits to collect specimens. Coupons or tags must remain attached to all specimens.

Division G.

HOTELS AND RESTAURANTS.

The use of game and fish allowed only in following cases: At any time of year, when sold by an officer who seized them under the law, and having his sale invoices attached; or when procured from a licensed private park or lake with invoice attached; or when lawfully imported and sold under Division H. Also during the open season and for five days thereafter for the use of the person killing the same and his guests.

Division H.

IMPORTATION, TRANSPORTATION, STORAGE, ETC.

No game or fish can be imported (except alive for propagation) from any State whose laws forbid importation and sale therein of Colorado game and fish. Importer must not sell except in original package, number and condition until he has procured a certificate of lawful importation from the commissioner (fee $1), which must be kept publicly exposed with article, and which authorizes storage and sale for thirty days. If not then sold, storage permit (fee $1) good for thirty days more must be obtained. Importer selling must make and give purchaser an invoice showing date and number of importation certificate or storage permit. Transportation is allowed only in case proper certificate permit, coupon or invoice attached, or under charge of officer, or warden, or commissioner of other State of United States, except birds and fish in open season, and five days thereafter in lawful number and quantity and possession.

All game and fish seized must be sold and invoice given purchaser, good for thirty days' possession, use or sale.

All packages must have proper document attached to the outside and the contents marked. Any person in lawful possession of game or fish killed in the State may procure a storage permit good for ninety days after close of season. Storage is allowed on coupons, certificates and permits signed by the commissioner, and during the periods authorized by them only.

Division I.

UNLAWFUL DEVICES, OBSTRUCTION AND POLLUTION OF WATERS.

This division contains the usual prohibitions against nets etc., the erection of dams without fishways, also against the pollution of water by mills, placer mines and reduction works. In relation to the latter, which are connected with the mining industry, there is a provision to submit to the court the relative importance to the State of the industry concerned compared with that of the fish. Courts are authorized to require means to be adopted to lessen the pollution, if practicable, or they may order the industry to suspend, or permit it to continue under restrictions or without, and an order so permitting bars a criminal prosecution for the pollution. In case of changed conditions, the decree may be changed on application. This is an entirely new feature in game and fish laws, and is on account of the great importance of the mining industry in Colorado.

The rest of the act, consisting of Divisions I and J, relate to the methods of prosecution, penalties and fees. The penalty for killing bison, mountain sheep and using dynamite, etc., and baiting traps with game, is from $500 to $1,000 fine, and thirty days to six months imprisonment; other penalties from $10 to $500, and imprisonment ten days to six months. All fines are divided, one-third each to the informer, the county and the State. All fees, except for county hunting licenses, go to the State, and all moneys received by the State constitute a game fund for the enforcement of the act. Fees are to be charged by the commissioner for licenses, certificates, permits, etc. Licenses for parks, lakes, preserves and taxidermists may be renewed from time to time for smaller fees than originally charged. Moneys collected by the commissioner go into the game fund.

This act is expected to produce sufficient to pay all salaries and expenses under it.

Complete forms of every kind required by the act are printed in full in it, and every form shows on its face whether possession, use, transportation, storage or sale, or any of them, is authorized thereby, as well as the time for which it is valid, and each one must bear the written or lithographed signature of the State Game and Fish Commissioner, except invoices from private parks and lakes and importers, and they must refer by date and number to the license or certificate under which they are issued.

The act is quite voluminous, as it is intended to cover every condition that may arise, and it seems to do so.

It appears to furnish a frame upon which game and fish laws suitable to every inland State may be constructed.

CHICAGO AND THE WEST.

A Pair of Shoes.

Chicago, Ill., Dec. 3.—At first thought there may not seem to be very much in a pair of shoes, but such is not always the case. There is often a great deal in them. Besides other things, there may upon occasion be a great deal of discomfort in a pair of shoes, as I presume pretty much every shooter has at one time or another found out for himself.

A year or so ago I was over in Canada, reporting some field trials, and I think it was then that, finding I had left behind me the proper footwear, I purchased, in a moment of desperation, a pair of shoes which have been making personal history for me ever since. They were the only pair of shoes I could find which I thought were long and broad enough, and also waterproof enough. They were represented to me to be of sturdy Canadian fabric, but I have since found blown into them the trade mark "Made in Germany." They were not wooden shoes, but much heavier and less waterproof than wooden shoes. I think that each one of these shoes would weigh somewhere between 4 and 5lbs. net, without any mud on them. I compromised by wearing them three or four hours and then taking to a pair of rubbers. After that I sat on the fence.

I am the most forgetful man in the world, and so it happened that when I was over in Canada again this fall I found that same awful pair of shoes again in my kit. It occurred to me that perhaps they needed breaking in, and so I tackled them again. I noticed that there was a nail sticking up in the heel about a half-inch or so long, but didn't think it could hurt me very much, especially as I believed myself no longer a tenderfoot. I walked on the nail all day, and it is all a mistake about my not being a tenderfoot. At night I got a hammer and a piece of iron and operated on the shoe, with the result that I tore the inside leather lining loose and disfigured the counter in such a way that it hung down dejectedly in front, and made a nice ridge for the soft part of my foot to lean against the next day. I took to rubber boots then, but resolved to take up the matter later with this pair of shoes if I had time. The next day I found a shoemaker at Chatham, who said he came from New York, and had traveled all over the world, but who also said he had never seen a pair of shoes like that in all his journeys. He said he could fix them up for 15 cents, if I thought the shoes were worth it, and I told him to go ahead. He sewed the damaged interior of the shoe together and hammered a nice large seam up and down the middle of it, so as to catch my heel in another place, which had not yet been damaged. I paid him his gold, and he forgot to put back my leather shoestrings, which were worth more than the shoes, though we will let that pass.

Now it happened that I had been asked by my friend the Mayor, likewise sometimes known as the Pirate, to go shooting with him over in Michigan, but had just received word that it would be impossible for him to get away for the shoot. At the field trials there was a nice young man by the name of Mr. E. E. Bliss, who had come over to see about how much better or worse field trial dogs were than good shooting dogs, and who had seen. Mr. Bliss was wearing about the homeliest pair of shoes that I ever saw, and on the strength of that I tried to trade shoes with him, but couldn't. His shoes were built to order on his own design, rather broader in front than at the back, and tapering gradually to a point behind the heel. He said his shoes were waterproof, and I told him so were mine; but he explained that they kept his feet dry, and at this I had to quit talking trade, for I had discovered it to be the peculiar property of my own prizes that they let all the water in and kept it there. Mr. Bliss said his shoes were not lined, but were made of good leather. He also showed me that the soles had around their edges a straggling line of spikes. I thought at the time that the shoemaker had been pretty stingy with his nails, but as I had only known Mr. Bliss a day or so, I thought I would not mention it at the time. In regard to these spikes and other things I shall have more to say presently.

The result of our talking trade was that Mr. Bliss invited me to go home with him and have a shoot over in Michigan. He said he had a dog, and although he couldn't run as fast as some of the dogs we had just seen sprinting, he allowed that maybe he could find a bunch of quail or a partridge now and then. This was awfully good of Mr. Bliss, and so I told him I would go along with him, and we would talk over that matter of trading shoes from time to time.

Now it happened that this fall was the very worst fall that ever struck the lower peninsula of Michigan. About the end of the first week in November there came the worst snowstrom ever known in that section so early in the year. The woods were already filled with water from heavy fall rains, and when the snow filled in all the holes it made things about as bad for walking as could well have been asked. Mr. Bliss and I went to his home and took an early morning train out some twenty or thirty miles to the little village where we intended to do our shooting. He chose this country because he thought it was dryer than most sections, and he said he thought we could get along with our shoes all right and would not need to wear rubber boots, which latter both of us despised.

We started out early in the morning on foot, in the middle of a heavy fog, so thick that one could almost hang his hat on it. In the low places the grass was covered with a white rime. Now and then there were patches of soft wet snow. At times we came to running streams and wide patches of water, such as one would expect to find in a spring freshet, but hardly in November. Here and there were slashings and burned districts, where stumps had been pulled out and where the holes had been filled up nicely with water and snow. Between these slashings lay soft, black fields, where one would not strike bottom until he got in over ankle deep. I could not imagine a more thorough test for my shoes, nor could I imagine a pair of shoes in regard to which I had already more thoroughly made up my mind. Mr. Bliss took it calmly, and by noon I was still more eager to trade with him, for his feet were dry and mine were filled with ice water, which kept my toes in a perfect state of preservation. We went into a farmer's cabin for lunch, but though my feet at that time thawed out partially, I cannot state that the circulation was fully established until about half-past eleven that night. All that day Mr. Bliss went along as comfortable as you please, and he shot as well as he walked. It is a comfort to go out with a man who is a good shot. I don't mind missing a bird now and then, and I don't want to kill a wheelbarrow load every day, but I don't like to shoot badly enough to feel disgusted with myself at the close of the day. My recollection is that Mr. Bliss and myself both shot pretty well that day; indeed, I think he only missed one shot all the time. The dog of which he had spoken so deprecatingly was a setter, Keno by name, and he certainly did his work well, under conditions which were enough to take the heart out of any dog. He found us several bevies of quail and about a half-dozen partridges. Also he retrieved, and I loved him for it. Field trial dogs do not retrieve; but then they are not intended for hunting, but only for show. I don't recollect just what our bag was, but think we had about eighteen or twenty birds. Mr. Bliss apologized for the smallness of the bag, but it seemed to me that we had had pretty good fun, in spite of the weather, which was such as to unsettle all the habits of the birds and make it hard to get much shooting.

I was now a very sincere admirer of Mr. Bliss' shoes as well as of his dog, but I could not get him to part with neither the one or the other. One time during the afternoon I was obliged to sit down and take off my shoes and make readjustment. They were large shoes, what might indeed be called copious shoes; and I wore two pairs of socks, in order to fill the demand. The shoes were made very broad in the heel, so that one's foot might work up and down, and miss nothing of the seams, knots, bumps, nails, etc., of the interior. Naturally a loose heel means that one's stockings will crawl forward. Occasionally I found that one of my stockings had thus crept off my foot and was nestling comfortably in the toe of the shoe, whence it could only be recovered by a long stick. I explained these things to Mr. Bliss, and he said that he had thought I looked like an intelligent man, and that he had rarely been more disappointed. His own shoes, he explained, fitted him neatly, but easily, did not slip up at the heel, did not creep and did not leak. He moreover explained to me what I wish here to call to the attention of sporting readers, that the sparseness of nails in his soles was not due to economy, but to design. He said that, having tried all manner of spikes and hob-nails, he had learned that the best enforcement of the sole was a line of

(shortened) lumbermen's spikes, not hob-nails, but little steel points. Experimenting with these, he had found that it was a mistake to use too many. He had found that about five on each side and two at the toe was the right number. It was a mistake to have the toe spikes too far forward or too far back. If placed at the extreme end of the sole they tore up the grass and retarded the walking, whereas the true object of the nail in the sole should be to give firm footing, without hindering free action of the foot in any way. I found much logic in this, both in the theory and the practice to which I had seen it given. I bethought me of the star-spangled hob-nailed shoes one usually sees offered in the stores, and recalled a certain experience I had once had with a pair of heavily hob-nailed shoes, which I had put on new for a ten-mile walk. My feet at night contained a perfect map of the sole of the shoe, by which the location of each hob-nail could have been determined. "That's it," said Mr. Bliss, as I mentioned this experience to him. "That is why I have the spikes in my shoes around the edge, where they are free of the foot and cannot hurt me. Unless you have a sole so heavy that you cannot walk on it with comfort, all the hob-nails under your feet will hurt you during the day's walk. You only want spikes enough to give you good foothold, and all the rest are useless, and worse than useless."

I commend the above to the considerate attention of makers of sporting shoes. I believe it to be a mistake to cover the bottom of a walking shoe with hob-nails, although this will do all well enough for a wading shoe, to be worn while fishing. In walking logs, as we had to do very often in this lumbered-off country where we were shooting, the short spikes are much better than hob-nails. If they were not better, the lumbermen would not use them. Each country develops what is best for itself. I submit my spiked shoe of Mr. Bliss as a new and good idea for the trade and the people who support the trade. As proof of its excellence I will state that one time during the day Mr. Bliss was able by virtue of the spikes in his shoes to cross a rotten, slippery cedar log over a swollen stream, where I did not dare to risk the smooth, wet leather soles of my own shoes. This put him apart from me for some time, and made me still more willing to trade footwear with him. Indeed, I began to think Mr. Bliss a very practical sportsman. He could walk a-plenty and do it easily. His dog always went to the right place, and so did his gun. By the way, he shot a Winchester brush gun, and used No. 10 shot. He answered my query as to the efficiency of this small shot load by killing practically every quail he shot at, and two or three grouse—all he shot at—one at fully 35yds. I have never yet been out with a man who shot a Winchester pump gun who was not a good shot, although they nearly always apologize a little for the gun, as though it ought to be ashamed of itself for being so deadly.

On the second day that we shot together Mr. Bliss and I came pretty near doubling our bag of the day preceding, having nice, bright weather, which brought the birds out on the fields. I borrowed one of his No. 10 shells and killed a grouse stone dead at nearly 35yds., I should think. I was shooting No. 9s myself, a shot which does very well in my own fusee. We could not see that we lost any birds crippled, most of the shooting being so close that the fine shot did the work perfectly, better, we thought, than No. 8. We had a fine day that Bliss, and think he ought to have been satisfied with ourselves. At least, I was very well satisfied with Mr. Bliss, and thin he ought to have been satisfied with himself, though for my own part I did not shoot so well as I had the day previous, and did not kill my half of the bag.

On this day we wore rubber boots, in view of our experience the day before. This was an improvement for me, but not so with Mr. Bliss, who spent considerable time bemoaning his fate, and wishing that he had his shoes along instead of his rubber boots. The result of his day's walk was that he accumulated a fine large blister on his heel, which I was very glad indeed to see, inasmuch as it put him, so to speak, on a rather more even footing with myself. I was able to give him a little valuable information in exchange for his advice about spikes and nails. Acting on my suggestion, he got a bit of surgeon's adhesive plaster, stuck it over the abraded portion, and floated like a dream through the woods all the rest of the time.

I should say that, none the less, the balance of trade was still rather in favor of Mr. Bliss, for on the day that we wore rubber boots I picked up another idea from him for which I would not take several dollars. This was, like the spike idea, a simple thing, a good thing and one of the inventions of the lumbering district. It was no less than a simple piece of half-inch harness leather, with a buckle on the end and a split in the middle. You stuck the heel of your rubber boot through the split in the strap, and then buckled the strap over your instep, or rather over the foot at the angle of the ankle and the instep. This kept the boot from allowing the foot to work up and down at the heel, and it is a device which is a great producer of comfort to any one who has to wear rubber boots in walking. The stiffness and width of these boots at the heel usually allows the foot to play up and down, and I imagine that every snipe shooter has found out how his stockings will crawl down into his boot when this is the case. This trap idea was invented by the French Canadians for the heavy leather boots, which they used to wear in the woods. I had never seen it used before, but I am going to see it used a good deal from now on, when I go out hunting in rubber boots. It is a great scheme, and I cheerfully recommend it to the sporting trade, who can get a good many good practical tips out of the FOREST AND STREAM now and then.

On the evening of our second day Mr. Bliss said he thought we ought to grease up our shoes a little, so that they would turn water better. "All right," said I, "we'll dry 'em out and then grease them up good."

"That is where you would make a mistake again," said he. "You don't want to grease leather when it is dry, but when it is wet. How does the coachman clean the harness? Why, he first washes it all off in warm water, and then he hangs it up to drip a while, and then he gives it a coat of neat's foot oil. Our leather is already wet, and we need only scrape the mud off to make it clean. We have no neat's foot oil, but we can get some good old tallow, like mother used to make, and coat the shoes with tallow, well rubbed in. Then they will turn the wet pretty well; at least mine will."

This process of tallowing up the shoes kept us busy for the best part of the evening, but after all it was for naught. The weather advices reported a blizzard coming the next morning, and it was there on time too. Yet the ice that now steadily formed was not strong enough to keep us from breaking through, and once more we had to take to the rubber boots, for this time the walking was such that we sometimes went in half-leg deep.

We now changed our hunting grounds by a dozen or fifteen miles, having conferred with the Mayor, who expressed regret at not being able to go with us. Almost to my embarassment he insisted on my taking his dog Bob.

I don't think anybody ought to use another man's dog—unless it might be just such a dog as Bob; this old Gordon doesn't need any watching, but just goes ahead and does his own hunting without any handling, and takes the shooter to the good places.

On this day we went out with Mr. Davis and his guide Archie, taking team for a stinging morning ride. Archie told us how to hunt and where to round up for the night, and then we all went away and didn't do what he said, I am afraid. I know that I got separated from Mr. Bliss within the first ten minutes, and the first thing I knew I was following scattered quail off through a slashing of a mile or two in dimensions, until I got out of hearing of the guns, and the wind came around and got on the wrong side of my face, by which I inferred that I was lost. After I found myself in this level, flat country, where it is easy for a stranger to twist himself up, I discovered that I was out of the line which Archie had laid down, so I cut loose and hunted up country for myself. It was like exploring a new world, with just Bob for a guide—by no means a bad one, for he was busy and successful in his work, in spite of the fact that he had never been introduced to me before that day. I enjoyed it hugely, this being off in a strange country to myself with a dog that knew his business and a good long day ahead.

It was a bitter air that morning; the thermometer had dropped some 40° at a single effort. The wind was biting in its keenness, and so strong that in the open one could not well face it. The birds were wild and unsettled, and I never saw quail fly so far as they did that day. I watched one bevy reach the tops of the trees, and then, caught by the wind, sail off till I actually lost sight of them in the gray light of the cloudy sky. They went over a quarter of a mile surely. The shooting was very hard, and I do not thing I killed half my birds. The first three quail I killed stright, and Bob looked at me with evident approbation, thinking that I was in the same class as his owner, the Mayor, who the other day killed eleven ruffed grouse without a miss. I could not long keep up this imposition on the dog, however. We were walking along the edge of a slash when he came to a nice point, just back of me, and as I turned to go to him there was a sudden awful smashing sound and a thing about as long as a snake broke out of a treetop and flew away. I shot over toward it, but didn't jar it, and it disappeared and left nothing but a hollow laugh upon the air. My friends later told me that this was a grouse. I had been killing a good many grouse, and had seen so little of this spectacular quality you read about in books that I was beginning to think a grouse was a good deal of a humbug. But this bird was a regular story book one, and when he got into the wind it was no use trying to kill him, so I didn't try, after firing carefully into the center of the air with both barrels. Bob looked at me a little startled, with an expression which seemed to say, "Please don't let this occur again."

We wandered on over this new world, and Bob found several bevies of quail for me, and about the best I could average was one bird at the bevy rise, and nothing after that. I never saw birds so wild and strong. Yet the quail were out at the edges of the fields, I think feeding in preparation for what they saw was going to be a spell of bad weather. It was pretty cold in the open, so I swung into the covers, where popple thickets and down timber seemed to offer good grouse ground. Pretty soon Bob began to walk along fast, with his head up, twisting around among the tangled cover like a cat. I supposed that this meant grouse, and such was the case. We got a nice point, and as the bird went up I centered him fair, and once more rose in the dog's estimation. He brought the bird in to me very proudly, and I rejoiced to see one more good retriever. Without the retrieving of the dogs, Keno and Bob, Mr. Bliss and I must have lost many a bird, for in places the cover was so thick that it meant actual climbing, and if one took his eye from the bird a moment it was very hard to find the spot again.

Bob now led me deep into a wood, occasionally getting lost from me by way of keeping up my interest. I have no doubt he was often on point at such times, and once I found him so, and was able to kill a bird over him. After a time he dropped almost flat, as he passed a little clump of brush beside a log fence, and out went a grand grouse as I came up to the point. This fellow I caught with the second, and Bob showed great pleasure as he brought him. So we wandered on and on, and the first thing I knew the day was nearly gone. I swung around near the bridge, where I had been told to come at night, and Bob carried me across the stream and out over a popple flat. He found a bevy of quail in here, and I killed a couple. Then he went off to one side, and I was for the time some 60yds. from him. At that very moment, right under my feet, with a rush and a roar like that of the bird earlier in the day, there went out a fine big grouse, and I have to confess that I shamefully missed him, as any tenderfoot might have done. I stood gaping at him with gun half-opened, when right at the same place, from under the same log at my very feet, there slipped out a second bird and sailed away after the first, less noisily, but just as safely, for my gun was out of commission for the instant! With any ordinary luck I should have bagged both those birds. I could not look Bob in the eye as he came up and sat down, looking scornfully at me. This rather affected my spirits, and as it was growing dusk I turned back for the meeting place, and so ended my last day. I had a very small bag, only two or three grouse, I believe, and a half-dozen quail or so, and I began to figure that I was not much good unless I was along with a good shot. Yet what was my secret joy to learn that all those other men, my friends, who were acknowledged good shots, and who knew the country better than I did, had done little better than myself. Even Archie, the invincible, had with Mr. Davis' help only bagged sixteen birds, and he was so disgusted that he didn't want to talk. Mr. Bliss, who had lost me early in the day, had wandered off into deep timber and found some grouse, killing either four or six, I forget which, with a few quail. Our average bag was about eight birds to the gun, which certainly is not startling. Yet it is long since I have had a more interesting day. It was so cold that I walked hard and fast all day, and covered a lot of country, and though it is always lonesome to shoot thus solitary I found much on the other hand to make it pleasant, and came in to camp in a glow of warmth and with a great hunger.

It was an interesting lesson we had in dogs that day. Mr. Bliss had been hunting his dog Keno, the English setter, who is only a two-year-old, though big and strong, all the season, more or less, before this time, and we had given him two awful days in snow and slush. Yet he went this last day as well as ever and never once begged, though his coat was a mass of ice. Bob, the big Gordon, a powerful, grand looking creature, was also of course covered with frozen ice fringe all day long, yet I may testify that he kept his gait the day through, and gave me all I wanted to do to keep up to his standards of a natural hunting gait. At night the poor fellow was a mass of ice, his heavy coat being frozen full. We had a half-dozen miles to drive to town, and it seemed cruel not to thaw out the dogs first—as indeed we did at a farmhouse near by till the good wife protested. So we got the extra fur robes and blankets, and wrapped the dogs up, and so took them in that way. Bob lay on my feet, and I never felt him shiver once. He melted all the ice off himself by his own heat, and in spite of all I could do insisted on having his head out of the blankets to see what was going on. That is the sort of dog which I take to be a shooting dog, a powerful and game creature, which has courage and stamina enough to enjoy his fun and endure the hardships. For some puny men shooting under such conditions would be no sport, and for some puny dogs it would have been punishment perhaps fatal in its results. I asked Mr. Bliss how he thought these two dogs would do in a field trial, and he smiled gently. "They do pretty well here," he said. Either of them was pretty much my sort of a dog. They were both repeaters, and they were both retrievers, meat dogs, if you like. If our field trials shall bring more of these upon the land, they will be doing a good work, and in so far as they depart from this sort of standard of practical excellence and durability, I should ever feel, as did Mr. Bliss, like smiling gently when they are proposed to the participant in actual sport in the field, where both man and dog are out for all day, and intend to go again to-morrow. On our return from the hunt on this bitter day, we found that many other shooters had been forced to give up the hunt before the day was half done, their dogs having suffered so much that they had to quit. I hated to leave my new friends, yet I came away from my first and only hunt this season with the feeling that I had learned something about shoes and dogs and other things.

The Lion Hunt.

Returns from the much-exploited lion hunt at De Beque, Colo., seem to indicate that the State game warden, Mr. Swan, was not wanted. It also appears that it is not desirable to hunt mountain lions with a brass band. There were over 100 hunters, but not enough dogs to go around. Two cubs were caught alive, and two adult lions were killed, to say nothing of a lynx or two and a few wolves. Everyone had a good time, though it was cold.

Minnesota Justice and Justices.

CHICAGO, Ill., Dec. 24.—Agent Fullerton, of Minnesota, may be near the end of his duties as State warden, but he is certainly keeping up his hustle, and I wish he could be retained where he is. He has been having a brisk legal battle up in his old fighting ground, and speaks of it in something of the following terms:

"I just returned this morning from Detroit, where we had a battle royal. You know the correspondence I had with Indian Commissioner Jones has borne fruit. Stephens got word that a trader had some venison and birds on the White Earth Reservation at Pine Point. He got the sheriff of Becker county with a writ of replevin (something new in game laws), and went there and got forty-eight saddles of venison and 127 partridges. We arrested a white man, named Alf Cooney, who was in charge of the game, and brought him to Detroit. He is in reality Davis' man, but Davis remains in the background. Then our battle began, and we had a fight at Detroit the whole day long. We arraigned him before a justice and they took a change of venue before a justice who would do as they wished. We found he was going to let him off on the same plan that Baxter did—fine him about $10—so we dismissed the case, and immediately rearrested him and took him before another justice living about seven miles from Detroit. Then we had another legal fight, lasting until 10 o'clock at night. The same tactics were there employed in regard to letting him off easy, but we gave them to understand that we would make a separate complaint for every saddle of venison and every bird, and we would fight it if it took all year. The justice got scared and finally bound him over to the grand jury for forty saddles of venison, after which he procured bail and was released. This promises to be another stiff legal battle, but I think we will win. Before this reaches you we will have Davis arrested for shipping twelve saddles of venison to St. Paul. Stephens got on to it and followed the shipment all the way down, hoping to catch the man it was consigned to, but we have sufficient evidence against Davis to connect him with it. You know the trouble we have had with this man, but he is still defiant.

"I have always admired a fighter, but he takes the cake. We made another nice seizure at Brainerd yesterday, consisting of fifteen saddles of venison, six deer heads and one moose head. They killed this stuff up in the wilderness, where it is almost impossible to go after them, and they then run the risk of getting it out the best way they can, but we are glad to be able to say that they are not meeting with very good success thus far."

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

New Brunswick Notes.

FREDERICTON, N. B., Dec. 23.—Mr. James Turnbull, of Halifax, who has been hunting with Henry Braithwaite for the past three weeks, reached Fredericton yesterday. Mr. Turnbull brought out a very handsome moose, with a cross section of 50in.; also his legal allowance of caribou. On the trip he saw thirty moose and hundreds of caribou. The Miramichi and Cain's River country seems to be alive with caribou this fall. In view of this fact many sportsmen advocate raising the limit to each shooter from one to two animals. Hunting caribou on the snow has always been a popular form of sport in this province, but where only one animal is allowed to each rifle few parties will go to the expense of fitting out for this purpose.

On Thursday evening last the Maritime express on the Intercolonial railway, near Rogersville, ran into a herd of thirty caribou. Three of the animals were killed outright and several others injured.

It looks as though some of our rifle manufacturers will have to pay more attention than they have yet done to the action of frost upon the magazine. I know of several cases occurring within the past fortnight where the magazine of a certain popular make of small-bore rifle has utterly refused to work under cold weather conditions.

General Hutton's party is still in the woods. During their first day on the hunting grounds Captain Bell, the General's aide-de-camp, brought down a moose with a 58in. spread of antlers.

Two of the youngest guides in the Tobique country are Aleck and Dave Ogilvie. The latter had a very exciting experience with a monster bull recently. He was going over a line of traps about two miles from camp when he struck a fresh track. This he followed about 200 yards, when he came upon an enormous moose, across a windfall, about 25yds. away. His rifle twice missed fire. At the third attempt he hit the moose in the shoulder and the animal staggered, then galloped away, leaving a trail of blood on the snow. Dave followed him about half a mile and then saw him watching his back track, about 70yds. away. He again fired, when the moose snorted and rushed straight for him, with his mane on end and shaking his head. Dave retreated and got behind a big tree. When the moose came within 30yds. he snorted and humped his back up as though inviting his enemy to close combat. Dave fired again, but another snort and shake of the head were the only visible effects. The boy then leaned his rifle against his tree of refuge and aimed straight at the breast of the moose. The immense animal then reared on his hind legs, made a futile attempt to charge, fell backward against a tree and was dead before Dave could reach him. The horns have a spread of 58in., and but for an injury done them when in the velvet would have gone over 60. They have 26 points, the plate of one horn measuring 14 and the other 12in. The moose was very gray in color and showed many signs of old age. Dave's brother Aleck has killed a moose with a spread of 53in., and at Island Lake found a dead moose with a spread of 51in. It is thought by Mr. W. Garrison Reed, of Boston, that this is the moose that was wounded by Dr. Heber Bishop when hunting in that locality.

Adam Moore, of Scotch Lake, has shot a bull moose on Tobique weighing 1,250lbs. The horns measured over 5ft. Henry B. Eaton, of Calais, guided by William Griffins, on the first day on hunting grounds shot a very large moose, with 54in. spread. W. H. Carnall, of St. John, has received a fine specimen of locked antlers of two bull moose, killed while fighting on Canaan River.

So far as known, up to Saturday last no moose had ever been shot on Miramichi waters with a spread of 5ft. While the Sou'west country seems to be fully equal in point of game supply to either the Tobique or the Restigouche regions, yet exceptional heads have rarely been taken there. This no doubt is a purely accidental circumstance, as the Miramichi and Tobique hunting grounds really merge into each other at the watershed, and moose are found everywhere on the hardwood ridges and around the lakes. Still it remained for Dr. Heber Bishop, of Boston, to prove that 5ft. heads could be found on the eastern side of the divide. The Doctor, with his friend, W. A. Ross, of New York, hunted for five days on the snow in the Sister Lakes and Rocky Brook country. They had as guides Ed. Norred, Jim Paul and Herb. Heal. Old bulls were found to be plentiful, and many were started. On the third day a very large moose was shot with a spread of 53in.. The fourth day was chiefly taken up in packing this moose to camp. On Saturday, while the Doctor and Ed. were setting out for a tour of some of the adjacent lakes, they suddenly came upon a monster bull plowing straight toward them through the snow-laden firs not 15yds. away. The Doctor's first shot brought the bull to his knees, then he got up and started, but fell after going a few rods, and a second shot finished him. The Doctor was naturally in high spirits when he discovered that the antlers measured a fraction over 60in., and as the bull was a noble specimen in every way, determined if possible to have him taken out whole and mounted for the New York exhibition. As the animal was killed within a quarter of a mile of a logging road, this proved to be a feasible scheme. The entrails being removed, the moose was neatly sewed up in canvas and then hauled to Boiestown and placed aboard the train. In going down the portage road, one of the points was damaged slightly, reducing the spread. In crossing the swift water of the Sou'west, Ed. Norred devised a novel scheme to keep the moose from being wet. He placed one sled on top of another, with long poles protecting from the sides, and the whole firmly bound together with ropes and hay wire. When the sled threatened to tip on the shoaler rocks it was kept on an even keel by these outriggers. The crossing was effected without a drop of water being shipped. Ed. also concocted a kind of sledge, to which the moose was lashed, and which greatly facilitated its being handled safely on the cars and steamers on its way to New York. The Doctor says the moose in New Brunswick are much larger than those he has seen on other hunting grounds. This monster weighed a trifle over 1,000lbs. after all his inwards were removed, and must have gone close to 1,300lbs. when he met the Doctor.

A moose has been shot near Nictau Lake, on the Tobique, which is claimed to have the finest head ever taken in this Province. Though the spread (63in.) is 4in. less than Mr. F. H. Cook's head, the blades are 19in. wide, and there are thirty-two perfect points equally divided on either side. The fortunate sportsman was Capt. Chauncy P. Williams, of Albany, N. Y., who had as guide George Armstrong, of Perth Centre. This head is being mounted by Mr. S. L. Crosby, of Bangor, who, by the way, has received up to date 103 moose heads, besides 450 caribou and deer.

If Mr. Emerson Hough, of Chicago, could only spare the time to visit Chatham or Richibucto this bracing winter weather, he would make haste to disown the Kekoshee fish story as a very commonplace yarn indeed. The fishermen there are now hauling up through the ice from 100 to 200 tons of smelt per day. These are sold on the ice at from 3 to 4 cents a pound and shipped to the States by the trainload.

Chat.

Editor Forest and Stream:

I don't want to subject myself to the charge of growling too much, but I hope you'll gratify me by inflicting a fine of $5 (to be used for the suppression of market shooters) on any one of your correspondents who pokes an angle of 45 degrees at you, for it's getting to be a very tiresome angle, and proves that the person who uses it doesn't know an angle from a wagon wheel. If he must use something near that slope, let him say 45 or 46.

I would also like a fine of that amount collected from the thoughtless scribbler who goes fishing for "speckled beauties," to be used for the same good purpose.

And while I am at it I want also to indulge in a growl against the editor of the Detroit Evening News for publishing an outrage like the "Michigan Hunting Record" without a word of condemnation.

Speaking of the feat of "Young Sam Cable, of Sullivan," he says: "Since Oct. 1 he has bagged more than 1,000 quail and partridges. He was out every day."

Young Sam Cable belongs to a class who are entitled to no respect, and if he had brains enough he'd be ashamed of his career. An occasional shooting trip gives infinite pleasure, but no sensible man can enjoy what he makes a daily business of.

A market shooter is one who is too lazy to work, and if our legislators were made of the proper stuff he would be made to work. I will never sleep soundly till he's suppressed.

The bull bat war—as well as the American-Spanish war—I am happy to say, is ended, and without the loss of a life, though I'm sorry to find that my little joke about my piety was lost on my serious-minded friend Coahoma, with whom I've been at fierce and feathery war for some time past.

DIDYMUS.

ST. AUGUSTINE, Dec. 15.

"Hitting vs. Missing."

Editor Forest and Stream:

Although I am an old gunner, I have read with very great pleasure and no little profit Mr. Hammond's delightful book on the use of the shotgun, entitled "Hitting vs. Missing." His instructions are so simple and so eminently practical that the most unlearned persons may profit by them, and yet all through the book runs a concealed thread of theory, which teaches the reader more than he is aware of as he reads.

I have a nephew about 12 years old, who is soon to have his first gun, and before he receives the gun I shall give him a copy of Mr. Hammond's book, in the hope that long before he takes his weapon in his hand he may have saturated his mind with the wise precepts given by that charming writer.

CONNECTICUT.

BRIDGEPORT, Conn.

Michigan State Game and Fish Protective League.

GRAND RAPIDS, Mich., Dec. 20.—*Editor Forest and Stream:* The annual meeting of the State Game and Fish Protective League will be held at the Hudson House, Lansing on Tuesday, Jan. 17, 1899, commencing at 1:30 P. M.

The question of changes in the present game and fish laws will be taken up at that time, and the committee appointed at the June meeting will present bills for proposed changes, and action taken at this meeting. Members of both branches of the Legislature who are interested in game and fish protection will be present, and will address the meeting. Governor Pingree has been given a cordial invitation to meet with us, and it is expected will be with us at the evening meeting.

CHARLES E. BREWSTER, Sec'y.

Bear Hunting in Pennsylvania.

Not for many years have bears been so numerous in the mountains of central and northeastern Pennsylvania. Old hunters have been killing them right and left in the mountains of Clearfield and Centre counties. Sheriff Bell and party, of Blair county, recently popped over three, while three others were killed in the foothills of the Alleghanies. Andrew Edgar, of Lonestown, has five large bears already to his credit, while John and James Schofield, of Du Bois, killed five inside of ten days. Bruin is particularly partial to the beech woods of Cameron and Sullivan counties, and up near the source of the Sinnemahoning one hunter and trapper has killed sixteen up to date. In the aggregate no less than forty-five bears have been killed in that part of the State within the past six weeks.

On the Upper Mississippi.

KITTANNING, Pa., Dec. 5.—*Editor Forest and Stream:* If you remember last year I made inquiry about hunting grounds for large game, and you directed me to write to Mr. B. C. Finnegan, at Grand Rapids, Minn., who was very courteous, and gave very satisfactory information; and at his suggestion we went up the Mississippi in a small steamer about seventy or eighty miles above the rapids. We had elegant quarters at L. S. Cards', on the banks of the Mississippi, where the stream is quite small. Mr. Finnegan had arranged for guides and boats, and to my surprise we were met by Wm. Tibbets, a guide, who had hunted with my wife and me the year before on the Brule, in Wisconsin, and knowing him we were more than pleased. He took our party, composed of Joseph Morris, of Pittsburg, and A. C. Bailey, of Ford City, my wife and myself, to the above-named place, and strange to say this point was named Gamblers' Point before Mr. Cards ever saw it.

Mrs. Jessop was very fond of hunting and always enjoyed going with me on these trips. She showed her adroitness and skill as a huntress, as she killed the first two deer, one of which was an exceedingly large one. Jim Drumbeeter, her Indian guide, thought she was the finest running shot he had ever seen, as she had killed both deer running. Four years ago she hunted alligators in Florida, killing two, one 5 and the other 7ft. long. As a wing shot she did very well.

The party killed seven deer and quite a number of mallard ducks. I became so infatuated with duck shooting that I would prefer shooting ducks than deer. We had intended killing one moose, but as we were located probably ten miles away from the moose hunting grounds, and the weather was quite cold, and we would have been compelled to camp out, therefore we resolved to defer the moose hunting until next season. However, we saw one moose at the mouth of Leech River.

C. J. JESSOP.

Maine Wolves.

A Kingfleald, Me., special says that George Woodcock, of Carrabasset, shot a doe deer last Saturday on Stratton Brook, that had a well developed set of spike horns. Another hunter, Edward Taylor, shot the fawn that was with the doe. Aside from the horns, the deer was exactly like any other doe, and weighed 125lbs.

Again there are reports of wolves in Maine, with their tracks followed by old wolf hunters, who "could not be mistaken." They do not bring out the trophies, however, and until they do the ordinary individual is inclined to regard their stories in the same light as that of the well-read fable.

Pickerel fishermen are at it. Reports from Maine mention big strings taken from Sabattis Pond. Mr. Greenwood, of Auburn, took twenty-three in one day, through the ice. Fox hunting is also in order.

SPECIAL.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

An Outing on Great South Bay.

BY FRED MATHER.

ALTHOUGH we did a little fishing, the season was late for bluefish, in the bay at least, and we went mainly just to be there. September had half gone when Dr. Bashford Dean drifted in on me with the remark: "It will be a fortnight before my work begins in the college, and I know a grand place where we can go on South Bay, and have good rooms in a fisherman's cottage, cook our own feed and have a good time. The fishermen will come and go, and you will be delighted with them, besides you will exchange the fitful rattle of the street cars for the steady roll of the surf." And without more inducement I met him at the railway station, and before 11 A. M. next day we were at Freeport, Long Island, where we found a wagon to take us to the landing.

Of Long Island's 118 miles in length, the Great South Bay occupies nearly half of its south shore, and the bay is from three to six miles wide. It is shallow, and separated from the Atlantic by a broad beach of sand, broken through by occasional inlets. At Freeport landing there is a salt meadow extending out more than a mile, and through this runs an inlet, which is as crooked as inlets are allowed to be, and a craft of 70ft. would find difficulty in making the turns.

At a little wharf lay a solidly built catboat about 30ft. long, which was taking on a seine from a great reel, and after this was aboard cakes of ice were put in the fish boxes, and bottles of those horrible concoctions known as "ginger-pop" and "sarsaparilla," generically called "soft drinks," were put on the ice. Then came bread, canned goods, and other necessaries, and I was formally introduced to the men who were to be our companions when they were not away in Freeport.

First was Capt. Thomas Smith, a great happy giant of sixty years, close shaven sometimes, but with a sprouting moustache that had only been out in the air for a week, and two rivulets of tobacco juice, whose sources were at each corner of his mouth, but finally joined in a deep bay in the dimple of his chin. Notwithstanding all these attractions, he was a bachelor. If the maidens of Freeport who have passed the giddy stage knew Capt. Smith as well as I do, they would hold him in such esteem that there would be a rush to see which would lay siege to his heart by eliminating the incrustations of tobacco and bossing him just a little bit into shaving more regularly, for he is a grand old man with a great big heart.

Then there was Byron Raynor, quiet and unobtrusive, except when he had a positive opinion about hauling the sheet aft or of luffing a little, when he would assert himself and his opinions in spite of being told to "shut up" by the man at the helm. This he did not mind, unless it was accompanied with advice to bathe his head in milk toast or to hand his feet overboard and cool off, when he would say no more until he was again moved to give advice. He was meek and I think he was married

Everett Smith stayed with us only a few days, when the fair at Mineola was more attractive than hauling a seine in the bay, and he was temporarily replaced by Jo. Brown, a young man from Freeport, who let the wind blow on his teeth when the sun shone in his face. Last, but first in many things, was Robert C. Denton, descendant of the first clergyman that invaded Long Island, and who figures largely in the history of the "island of shells." He is only "Robert C." in the village directory, and to the postmaster, but as the trusty pilot of that catboat he was not so addressed. He was young, jolly, musical, and had a stock of good humor about equal to the Captain's, and that is saying much, for Capt. Smith was a veritable Mark Tapley, bound to be jolly under all circumstances.

We Reach the Island.

And so with some poling and drifting, for the tide was half down when we started, we got out into the great bay and set the sail. One could imagine himself in Holland if he did not look back at the distant hills which form the "backbone of Long Island." A flat landscape of low islands and water was all that lay in front. "That's our cottage off there to the southeast," said Dr. Dean, pointing to a speck some miles away, which differed little from other specks, which seemed near it, but proved to be on other islands, as we neared them and changed our course into the different channels.

Fried ham, potatoes, coffee, bananas and turn in. The Doctor and I had a large room with two good beds in it. As we retired he said: "Did you notice how these fishermen eat bananas?"

"Yes, I saw over a hundred come on board, and supposed they were for some hotel, but after supper they all pitched into them, and Cap must have eaten half a dozen, to my surprise, for one would give me a fit of indigestion that would last for a week, unless it was a red one, when I might get over it in a day. By the way, I have not seen a red banana in five years; what's become of them?"

"I give it up, but it is a fact that the red banana comes no more to New York, and while it does not these fishermen eat the yellow ones in great quantities. Then they eat fried fish swimming in grease, and wonder why they have dyspepsia. They would fry a beefsteak if they had one, and eat it swimming in grease."

"Doctor," said I, "that fried ham is now in rebellion in

THE COTTAGE.

my department of the interior; it has started the gas factory at work on full time, and when that shuts down the vinegar factory will be in full blast, but I think there is enough good leather left in my stomach to stand it for a fortnight if we only had prepared for a siege of fried things."

"Well," said the Doctor, "the Captain is the worst dyspeptic, because he is older than the others, and he tries patent medicines and grunts, but he is strong; he will pull his end of the seine against the other three, and dyspepsia does not seem to affect his physique. Ordinary dyspepsia does not kill people, for many who have the trouble live to an old age, it is a source of suffering, as corns are, but that's all."

"That's very comforting, Doctor. I'll turn in and try to sleep before the vinegar factory starts in. Good night."

Some Fried Things.

There was not a fish to fry for breakfast, but a steak had been brought down for that purpose, and swimming in lard it was fried, as the Doctor had foretold, and as they cooked with boards of old fish boxes, there the coals were for broiling, but we had it fried in lard. The tide was not right for the men to use the net, so while the Captain mended it the Doctor took a gun, seeking the meadow hen, also called clapper rail, or the yellowlegs, both birds being heard frequently. I looked the net over; it had a mesh of 2¾in., about the size for the smaller fish of the bay. It was 100 fathoms in length and fished to a depth of 7ft. Bob Dalton and I rowed out to fish for "snappers," as young bluefish are called, and finding none we stopped surface fishing, put on sinkers and got a dozen sea bass, which weighed as many pounds, and there was our dinner. The Captain dressed and crimped them to the bone at short intervals, so that more grease could be absorbed, for he was a dyspeptic and needed lots of grease. Dr. Dean did not call down a single yellowleg, although we heard many answer his whistle, and he found nary a meadow hen. From the frequent shots we heard we thought he was right among them, but his bag was fifteen sandpeeps, which he skinned, and before we could protest against it the Captain had them frying!

It was now near high-water slack, and at the turn of the tide we took twenty sea bass in about as many minutes, and there was our supper, sure. Then, while the seine, fresh water and the pop went aboard, I saw that we were on an island covering three to four square miles, with bog holes at intervals, and learned that it was called Great Island. Also that we were on its south side, and that we had for neighbors two little huts, some 300yds. away east and west, occupied by men who watch oyster beds and live in that solitary manner, doing their own cooking; and worst of all, one was a widower with two boys who should have been in school.

So we started off to make some hauls, with Bob at the tiller singing:

> "And the moon shines brightly on the water
> Where the heroes of the Maine in silence lie."

This was all that I caught of the song, for the Captain would order: "Ease her a little," while Bob was forced to stop his song to tell him to shut up, he guessed where

"YOU EAT TOO MUCH FRIED STUFF."

they wanted to go. I turned to the Doctor and remarked: "There is one thing that is perfect about this craft."

"What's that?"

"The discipline. The crew has the Captain so well trained that when one of them gives him an order to shut up, he shuts pan at once, as we used to say in the day of flint locks."

"He shuts pan. What pan?"

"Generations before you were born, my boy, I was knocking about, and in the slang of my boyhood the old flint lock shooters told a man to 'shut pan' when he worked his mouth too hard; there was a 'pan' to shut over the priming—but you have got all the fun out of me on that that you will get; I remember the flint locks of Arab make, the antique guns and armor in your study, I owe you one."

We had reached the spot for seining on the shore of another island, for this part of Great South Bay is full of islands, and the Captain jumped into the water with the land line, and the boat put out and paid away at least 100 fathoms of line before the first of the net went over. We went straight away for the same distance until the net was all out, when the boat put back to shore, paying out line and striking the beach fully 100 fathoms, or 600ft., from the Captain. Then the mud hook was taken shoreward, and all hands went over the side to pull against the

THE CAPTAIN MENDS HIS NET.

powerful Captain, who approached them, as he pulled until the two lines were together. The result of this haul was a few 4lb. weakfish, some half-dozen striped bass of 3 to 4lbs., a lot of snappers, sea bass, blackfish, toadfish, dogfish, sculpins and a few striped mullet.

In the Evening by the Moonlight.

When four hauls had been made and we had reached home, the Captain asked me what fish I preferred for supper. I had decided views on the gastronomic qualities of fish, but I realized the fact that these men, like the farmer, must send the best to market, and I did not mention striped bass boiled or broiled; weakfish, which I never eat if any other fish is at hand, but which is salable; so I fell back on the sea bass, which is a real good fish, but was then small in the South Bay, and therefore only a "pan fish."

"How about the mullet?" the Captain asked.

"The mullet is good," I replied, "but it is too rich for some stomachs, and mine is in that category. I find the mullet too rich for my blood."

"Well now, I'm glad to hear somebody say that, for when I eat mullet I have dyspepsia the worst way."

Next day, while telling the Captain that if he would stop frying his food and eating so much grease, Dr. Dean took a low-down advantage of me and snapped his camera on us as I told my jolly friend that he eats too much fried stuff.

I have a chronic grievance against Dr. Dean, who, by the way, is young enough to be my grandson, notwithstanding the fact he toots in Columbia University, as it is said that he is a tutor of biology there, and my plaint is this: He goes out on fishing and shooting trips with me, but keeps his camera so jealously guarded that I can never get a snap shot on him, as he does on other people. He does not do unto others as he would that they should do unto him, but goes on as if there was no hereafter.

The Captain remarked: "I never see herrin' so sca'ce in the bay as they be this year. I tell you they are the fish we want, they sell better 'n weakfish."

The alewife, or river herring, comes into the bay and runs into the fresh streams, and even up rivers to spawn, and after this spring migration is over they go back to salt water. Of course the bay is salt, but the fish go off to sea, therefore I asked: "What fish is it they call a herring here, Doctor?"

"I can't tell you, possibly one of the alewives, not the glut herring, for that fish goes out to sea in winter, but I am not sure how far the branch herring goes, are you?"

"I am certain that it is not found in this bay in September, unless possibly a stray one, and I am curious to know what fish the Captain calls a herring; of course, it can't be the true sea herring, *Clupea*."

The fishermen retired and we sat watching the flash light off southwest at Sandy Hook, the Fire Island light to the southeast, and listening to the ceaseless roar of the surf on the outer beach. After a while I broke the silence with: "It would be a good scheme to get the Captain to take us outside Fire Island to fish for bluefish; I've all sorts of tackle, and enough to rig several bluefish lines. Is it a go?"

"It is not a go. You could not get the Captain within five miles of Fire Island Inlet. I won't tell you why, because I might spoil the story, but ask Bob Denton about it when we are all in the boat, for the Captain likes to hear the yarn. Have you noticed how these fishermen are continually guying each other, and how kindly they take it?"

"Couldn't help it; only Byron never guys anyone, but

THE CAPTAIN PULLS AGAINST THREE MEN.

gets plenty of it. I am only bothered now to know what kind of a herring is caught in this bay in the fall. I'm going to bed to dream of herring with spines on their backs and eyes like Fire Island light."

Here I may say that a few days afterward they caught one "herring," and my only wonder was that they did not call it a shad, for it is nearer the shad than the herring, and as soon as I saw the faint lines on its sides it was recognized as that fish of many names, the hickory shad (from its stripes), or "mattowacca," which De Kay called "fall herring," while on the Potomac it is the "tailor shad." This fish we had not thought of.

The Doctor looked over at the moon and said: "After breakfast the men are going to Freeport with their fish and will stay over night, while we will do our own cooking. How shall we spend the day?"

"You take that rickety old gun that I wouldn't shoot for an interest in the Keely motor and—"

"Then you value the Keely cure high."

"Motor, I said, a thing which makes wheels go around; as I understand the cure it stops them, but you take the gun and I'll wait for the tide to get up, and then fish. While I am waiting I'll—what does the Captain call it?"

"Do you mean 'muck out'?"

"That's it, I'll muck out our room, the dining room and the kitchen with a broom, but what does he mean by 'muck in,' as he said to-day?"

"Oh, that means come to dinner."

The Captain and the Whale.

The day and the night passed. We varied our diet with oysters, onions and potatoes, without frying the first durned thing, and the party came back next noon with more wood, water, ice, pop and bananas. Then we had a dinner of fried ham and potatoes, but I had found the onion sack and a couple "raw" in vinegar, cut the grease somewhat, and while the Captain mended the net and Bob and Byron washed the dishes as Everett mucked out, I stretched in the sun on the bench outside, and amid the clatter of dishes and the roar of the surf heard this alternately sung and said: "So peacefully we lay within the harbor, where Havana's lights—say, Byron, don't put so much soap in the water, it makes the dishes sticky—were shining bright and gay—shut that door and keep the flies out, will you?—We were dreaming of our home and of our dear ones, when—Byron, if you'll throw away that pipe I'll buy you a new one," etc.

When Bob had finished his dishes and his self-interrupted song, we sailed away for a distant fishing ground. After we had gone as far as one pipe would last, and all

hands were lounging in the idle wind, I said to Bob, who was at the tiller: "Bob, the Doctor tells me that you couldn't get Captain within five miles of Fire Island Inlet if you offered him two acres of land in New York city with Trinity Church in the middle of it. I've been down there, and have fished outside, but never saw anything more formidable than a bluefish or a harbor shark, nothing to be afraid of."

"You wasn't there when I was," said the Captain.

"Cap, you shut up," said Bob, and here I once more admired the discipline on this ship, "the Major asked me to tell the story, and you just keep still until I get through, and then you may add anything which I may have left out.

"It was this way: about twenty-five years ago we were in this same catboat, which has never had a name until you called her the 'Sleepy Ann,' and we went outside Fire Island for bluefish. I noticed that the Captain was a bit nervous when we could only see land on one side, and he showed his nervousness by the way in which he eat tobacco and the streams of juice which poured down his chin and decorated his shirt front.

"We were doing well; the bluefish were taking hold of our trolling squids of lead and ivory, and the Captain seemed to forget that we were some 3,000 miles from land on one side, as he saw the fish come over the rail, and as another craft neared us as we came about to follow the school of fish, he saw that it was his old friend, Daniel Bedell, and he hailed him with: 'Dan, we've got more bluefish than you can count in a month of Sundays.'

"There was no reply. A whale rose under Bedell's boat, tossed it in the air, and every man was drowned. That was enough for Captain Smith, the bay is sufficient for him, he ain't no hog to want the whole Atlantic and its whales. Ain't that so, Cap?"

The Captain merely replied: "You've got it right enough, Bob, but you're off about five years. This boat was built thirty years ago, and the whale business happened the first year that she was built, but again you're right, I don't want to go out where them whales swim around, I've had enough of that."

Here the Doctor sided with the Captain by saying: "I can't blame any man for not wanting to go where whales may come up under his boat and pitch him out. How big was the whale, Captain?"

"'Bout a mile long, I reckon, but I didn't see the whole on him."

A Haul in Upper Mash-Rack.

The Captain decided that a haul in the "upper mash-rack" would be the best, "for," he continued, "we want some weakfish to take in to-morrow, an' that's the place to get 'em, if they's any in the bay. How's that, Bob?"

"All right, we've got small fish enough, and we might get some over there. Better break some more ice to put on the fish in the two boxes, and leave enough for the other box if we fill it."

I was curious to know how they marketed their fish and asked the question, and learned that they had regular days to go to Freeport, and that peddlers took the large fish such as striped bass, weakfish, bluefish, etc., while all fish under 2lbs. weight, that were marketable, went to New York, where they found a better sale than in the country. Then I knew where the peddlers got their fish that they brought me when I lived on Long Island. I had once a theory that their fish were a lot of unsalable truck from the city, but the bright eyes did not support the theory, and I bought, but never believed the story that the fish were fresh from the nets, as the peddlers declared.

In approaching the upper mash-rack, I saw and counted twenty-seven blue herons in the water at one time, feeding, while others were in the air. The sight did not seem to impress any one else as uncommon, but never before had I seen a flock of these birds which contained more than one individual. Evidently they were on their way south, and had found a good feeding ground. They had seen a boat before, and moved off as we came within rifle shot. I wanted a photo of them, but they were too distant to show up, and were scattered over a great extent of shoal.

This time we anchored far from shore and started the haul from the boat. The Captain had jumped overboard on the flats, and before we anchored the net was all out, he pulling to the boat against three men, as usual. The men all wore oilskin trousers that came to their armpits, and as they were open at the bottom, I marveled thereat. The more I thought about it the greater the puzzle became; why did thy wear 'em? At last, after considering it in different lights: It was a sort of professional uniform; it was heredity, their grandfathers wore 'em; they might keep mud and slime from their trousers, and other guesses, then I gave it up and asked Bob.

Said he: "We don't need 'em in the water, in fact they are stiff and awkward, but when we come out they keep the wind from rapidly evaporating the dampness from our trousers, and chilling us to the bone, when the air is not cold. Under these oilskins we warm the water about our legs, and it stays warm, that's all."

How simple a thing is when you know it!

Sand Worms for Striped Bass.

Baltimore, Dec. 18.—*Editor Forest and Stream:* Several members of this club have used "blood worms" this fall for striped bass with great success. We have to send on to New York for them, and they are expensive. Can you tell us where they are propagated—or found? We may be able to get them, in that event, nearer home. They are a "new bait" to our fishermen, but surpass peelers, soft crabs and all else for striped bass: but we know nothing about them, except that they "do the work." Athenaeum Club.

[There are several species of these worms, which are commonly found in the sand or mud about low water mark. Others live in pools, hiding themselves among the vegetation that grows there. All of them are greedily devoured by most sorts of marine fishes, and make excellent bait. Collecting these worms is a regular trade about New York city, where they are sold by many dealers.

We have no doubt that they could be collected near Baltimore if it were made worth any one's while to do so. If these worms cannot be found on sale in Baltimore they might readily be shipped in some quantities from New York packed in sea lettuce. As, however, some of them are carnivorous, feeding on other worms, there might be some risk about this.

In Forest and Stream, April 3, 1890, Vol. IV., page 212, under the name *Nereis pelagica*, is figured one of the common forms found on the coast.

We suggest your sending some one to search for these worms in the sheltered, sandy and muddy coves about Baltimore. They may be looked for about low water mark, buried in the sand or mud, in much the same places where clams (*Mya arenaria*) are found. We shall be glad to learn the results of your investigations.]

Black Bass Breeding.

In response to our inquiry concerning the Richmond Club's bass breeding, Mr. George F. Peabody, president of the American Fisheries Society, writes:

Editor Forest and Stream:

Referring to your request for information regarding the club as successfully propagating black bass, to which I alluded at the meeting of the American Fisheries Society, held in Omaha July last, I take pleasure in giving you a careful account of work done and its results by the Richmond (Indiana) Fishing Club, from a letter recently received, written by one of its pioneer members.

Perhaps the figures will not reach into the millions, as is customary in the reports of public trout hatcheries, based upon the loose methods of estimating in vogue; but as the count is of definite fish, that came to maturity (i. e. fingerlings), I should say the results were very satisfactory, and the information should prove of value to fish-culturists. Geo. F. Peabody.

Geo. F. Peabody, President American Fisheries Society.—Dear sir: In answer to your letter, I would say that three years ago last spring I secured from the Union Ice Company a fifteen-year lease on their spring water pond. It covers about eight acres, and is 18ft. deep at the deepest point, and from 80 to 175 ft. wide. It is in the shape of a horseshoe, with the ice houses located on the peninsula. For the past thirty years small-mouth bass have been caught from this pond; but never in great numbers, as the water is very clear and they never seemed very abundant. The officers of the ice company agreed to make the lease with the understanding that, as proposed, a club should be organized, to protect their property and have full privileges as to the use of the water for propagating fish, angling, etc.

Our first move was the construction of a nursery pond, or, as our State Fish Commissioner says, a broodery pond. This is located in a deep valley next to our main pond; it is in the shape of a bowl, varying in depth from 6in. at its upper end to 5ft. at the lower end, where the pen stock and gates were located. This pond is fed from the upper main pond with pure spring water. It is about 90ft. wide by 170ft. long. After its completion that fall aquatic plants were placed in the shallow end, such as dock, lilies and others, their purpose being to attract water bugs, flies, etc., that lay their eggs on these leaves, and these supply the first food to the young bass fry.

The following spring we gathered our first crop of bass fry from the nests in the main pond, taking them in soft cheese cloth nets, and washing them off into buckets of pure spring water, and transferring them at once to the nursery. This was kept up as long as we could find the little bass coming off the nests. When the little fellows were two weeks old, we caught creek minnows, ran them through a sausage mill and fed the small pieces to the young bass. When two months old they would take live minnows 1in. to 1½in. long. From this period until fall we fed them live minnows once a week.

In October we opened the gates, letting the yearlings down into the box of our pen stock, and gathered them with a minnow net. They were from 3in. to 7in. long, though only a few were more than 6in. We counted every one we took out, and the total was 1,508. Many, of course, we did not get, as they caught in the moss that had grown up in the bottom of our pond, and died there, as we found a great many after the pond had dried out. We placed the ones we had secured in our main pond.

The second season we improved our nursery by laying planks through the center, and our prospects were favorable for a much larger supply, but in August of that season a violent rainstorm washed out one little pond, deluging it and running over the banks. We thought all the bass were gone, but on draining the pond in October we secured over 800. I have not the record of the exact number now, but it was between 800 and 900. We have now divided the nursery into two ponds, so we can sort the little bass, and expect next season, with favorable conditions, to increase our stock largely. We ought to raise easily 3,000 to 5,000. For further information of this plan, I refer you to Mr. Carl G. Thompson, of Swayzee, Ind., who, I think, is the most successful bass culturist in the country. Will S. Iliff.

Mr. Webb, in his "Manual of the Canvas Canoe" [published by the Forest and Stream Pub. Co.], offers to lovers of outdoor life a means of more comprehensive enjoyment than Mr. Hammond in these days of scarcity of game. Avoiding the use of involved technical terms, and explaining clearly the simple lines upon which the canvas canoe is constructed, Mr. Webb places it within the power of any one endowed with a minimum of mechanical skill to construct one of these boats. It involves nothing more than the ability to trace the details of the working drawings of the canoe, which are given on a single sheet contained in a pocket attached to the cover of the book. This sheet represents two designs of canvas canoes. Either one may be built at a cost of from $12 to $15, of the dimensions of 14ft. in length, 28in. beam, 16in. at bow, and 14in. at stern. The cockpit is 8ft. long and 20in. wide, and affords ample sleeping and stowage room. Model No. 2 in the working drawings has 30in. beam instead of 28in. For all the purposes to which a cedar canoe can be applied the canvas canoe can be used, except, perhaps, in water where sharp rocks are encountered, and even then the latter's easy repair counterbalances the superior solidity of the former. As regards the first cost of two boats, the advantage is greatly in favor of the canvas canoe. Mr. Webb's chapter on hints of cookery for canoeists contains the most admirable formulas for the preparation of a few simple aliments that have ever come under out notice.—The Nation, Dec. 22.

The Forest and Stream Publishing Co. are the largest publishers and importers in America of Books on Outdoor Sports. Their illustrated descriptive catalogue will be sent free on request.

The Queer Behavior of a Foxhound.

Editor Forest and Stream:

A few days since I went out with a young foxhound owned a few miles from here. This dog is about two years and a half old, and has had a few foxes killed before him. I saw him run three times last winter, and he did well. The day I took out the dog the conditions were not very favorable, there being 1in. or so of very dry snow on the old snow, and owing to the extreme cold the snow would not hold much scent, and there were a great many fox tracks, both old and new, all mixed up, leading in all directions.

Just before reaching the house where the dog is owned, I saw a fox jump out of the road, and I was driving along. I took the dog back there and when he caught the scent he became very much excited, and for some time acted like a fool, losing the track and trying to run the wrong way. I got him straightened out after a while, but in the meantime the fox had got quite a lead, and had been on stone walls, over bare ledges and such places, and the dog had to work hard to follow the track. As it was a pretty open country with large, bare hills, I could watch the dog, although at some distance most of the time, and he worked well, getting mixed up now and then with some other tracks. I did not try to keep him out, as I wanted to see just what he could do.

After a while he jumped the fox, and evidently was very close to him at the time. For a few moments after jumping him the dog barked and yelped very fast, and I saw both fox and dog. They were in an open pasture about 50yds. apart, in plain sight of each other. Suddenly the dog stopped barking and fox and dog cantered along slowly for about 50yds., when the fox stopped, turned around and looked at the dog, the latter also stopped, then the fox sat down, and so did the dog, and then they both sat some 50yds. apart, looking at each other. This was not very entertaining to me, as I wanted to shoot the fox, but he was at least three gunshots away.

After awhile the dog got up, put his tail between his legs and sneaked off, heading toward home. I then called the fox up and shot him. As I was about to take off his pelt, the dog came to me, having followed my track from where I had left the road. He seemed very glad to see me, and when I showed him the dead fox, he bit and shook it a little, and did not seem at all afraid of it.

Now I have been out with a great many foxhounds. I have known of first rate running dogs, which would follow a fox all day, but which would not touch one when coming to it, after it was killed, but I never knew one to sneak off, leaving a live fox sitting in plain sight. A puppy might do this had he never before seen a fox. I have also known of a number of instances where our very best fox dogs have refused to follow a vixen during the rutting season; they would follow the track of such a fox very eagerly, but when the fox was started would at once turn around, and come back, and sometimes the fox would follow on after the dog.

This dog I am speaking of has chased a good many foxes, and is very keen on a track; he will not follow anything except a fox, and takes no notice of rabbits. At first I thought the fox might be a vixen which had got ahead of time as to the rutting season, but it proved to be an old dog fox, weighing 11½lbs. C. M. Stark.

Dunbarton, N. H., Dec. 20.

Mars Won Third in the International.

Petrolia, Ont., Dec. 14.—*Editor Forest and Stream:* Will you kindly correct an error which appears in your report of the international trials held at Mitchells Bay last month. In it Brighton Bob is credited with having won third place in the All-Age Stake. The credit of this win should have been given to my doy, Mars, who ran his two heats without an error.

As wins are not so frequent with the majority of us that we can afford to disregard them, I trust you will place the credit where it is due. J. B. Dale.

Points and Flushes.

The premium list of the first annual terrier show, to be held at Odd Fellows' Hall, New Orleans, La., under the auspices of the New Orleans Fox Terrier Club, Jan. 19-21, can be obtained on application to the secretary, Mr. William Le Monnier.

As game and fish become less numerous, treatises on how to kill the one or take the other increase proportionately. Mr. Hammond's little book, "Hunting vs. Missing," however, comes not amiss, for what he has to tell is the outcome of fifty years' experience. In that time he has seen the evolution of the shotgun from the muzzleloader to the latest development of the multiple-fire. Mr. Hammond does not write from the standpoint of a maker of shotguns, but from that of the sportsman whose knowledge of them has come from persistent following of the sports of the field. His acquaintance with the subject is clearly defined in his chapter on the choosing of the gun. He there emphasizes the prime condition of accurate shooting—the fit of the shotgun to the physical peculiarities of the gunner. Where this requirement is neglected, no normal man can hope to become what is known as a "dead shot." Mr. Hammond exhibits equal common sense in his treatment of other topics connected with the use of the shotgun.—The Nation, Dec. 22.

Trap-Shooting.

Fixtures.

Dec. 27-30.—St. Thomas, Can.—Tournament of St. Thomas Gun Club. Jack Parker, Manager.

Dec. 28-29.—Auburn, N. Y.—Auburn Gun Club; live birds and targets. C. W. Tuttle, Sec'y.

1899.

Jan. 2.—Newark, N. J.—Annual shoot of the South Side Gun Club. I. H. Terrill, Sec'y.

Jan. 2.—Newark, N. J.—New Year's shoot of the East Side Gun Club; live birds; begins at 10 A. M.; main event at 15 birds, $5, birds extra.

Jan. 2.—Rutherford, N. J.—Boiling Springs handicap, with bird allowance, $5 entrance, targets included at 1½ cents, to be deducted from purse. Nobody barred. Rose system.

Jan. 5.—Newark, N. J.—Tournament of East Side Gun Club; main event, match between Morfey and Schortemeier for E. C. cup and State championship.

Jan. 10.—Brooklyn, L. I.—Brooklyn Gun Club's invitation live-bird shoot. John Wright, Manager.

Jan. 17-20.—Hamilton, Oont.—Annual tournament and grand Canadian handicap of the Hamilton Gun Club; $1,000 guaranteed. H. Graham, Sec'y.

Jan. 18.—Reading, Pa.—The Reading handicap; open to all, $10 entrance, $150 guaranteed. Arthur A. Fink, Manager.

Jan. 18.—Stony Creek, Pa.—Stony Creek handicap, 25 live birds. A. A. Fink, Manager, 426 Franklin St., Reading, Pa.

April 6-8.—Utica, N. Y.—Fulford's handicap at live birds. E. D. Fulford, Manager.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

April 18-20.—Lincoln, Neb.—The Lincoln Gun Club's second annual interstate tournament; targets and live birds; $500 added. Geo. L. Carter, Sec'y.

April 18-21.—Baltimore, Md.—Prospect Park Shooting Association's tournament; $500 added. Stanley Baker, Sec'y.

DRIVERS AND TWISTERS.

Mr. Fred Tibbler, of the City Park Gun Club, New Orleans, sends us a clipping from the Picayune of Dec. 21, which states that "Within the next few weeks a special meeting of the City Park Gun Club will be called for the purpose of discussing and arranging for the proposed State championship trap-shoot. This shoot will be held next spring, just after the hunting season has come to a close. At present the members of the club are so busily engaged searching the hills for quail and the marshes for ducks that they have no time to give such dead sport as blue-rocks any attention. Mr. Percy S. Benedict, who is one of the leading members of the club, and one of the best trap-shots in the city, while discussing the proposed championship tournament, expressed himself decidedly in favor of the plan. Some time ago such a shoot was suggested, but the time was not ripe. However, the question has been raised again, and there is now a general desire among the members to have the match. Naturally all the trap-shots are hunters, and they are now devoting their time to the more exciting and serviceable sport. Just as soon as the ducks have begun their journey northward and the laws protecting game resume force, the trap-shots will revive interest in clay pigeons. It is proposed to give a certain number of events, with the State championship, as the most important feature of the tournament. All the shots in Louisiana will be brought to the city for the contests, and as the tournament will doubtless be given during the middle of May, some of the crack shots of the country are expected South for exhibitions. There are a number of good shots who travel for gun companies, and these salesmen keep in close touch with tournaments. The local affair will be the first of a series of annual shoots, and within the next year or two the City Park Gun Club will doubtless make an effort to secure one of the great tournaments of the country."

The desk calendar issued by the Marlin Fire Arms Co. is a gem of artistic good taste. It portrays a field scene in the home of the quail. An English setter is on an intense point in the foreground; an Irish setter, standing in spirited pose with one foot on a rock joins in the point, while ready for the rise is a sportsman holding his gun in a position for instant use. The coloring is very pleasing. Concerning it the Marlin Fire Arms Co. writes us: "The design by Prof. Edm. H. Osthaus, is in the artist's best style, showing a sportsman afield with a pair of setters and his Marlin repeating shotgun. The printing is on fine bristol-board, and done by the most modern method of color photography, or three-color process. The calendar pad is engraved. We will mail one of these calendars to any reader of your publication who will send us one stamp to pay postage."

The calendar for the year 1899 issued by the Du Pont Company bears spirited portrayals of scenes of the chase. At the top is a mountain scene, in which is a mountain sheep taking a wild leap across a deep chasm, while his companion, sinking to the rock on the edge of the precipice, shows the paralysis of a mortal hurt. At the bottom is a field scene, a pointer and setter on point, two shooters advancing with guns ready for instant action at the flush of the birds.

On New Year's Day, in addition to the regular programme shoot of the Audubon Gun Club, Buffalo, N. Y., there will be a handicap at 25 live birds for a beautiful trophy, valued at $150, which will be known as the Clinton Bidwell challenge trophy. This event will be open to any shooter belonging to any organized club in Buffalo. The committee in charge are Messrs. E. N. McCarney, C. S. Burkhardt and L. W. Bennett. The conditions, etc., will be announced later.

Monday being a holiday, and Tuesday being a busy day in FOREST AND STREAM printing office in consequence, several communications on trap matters are necessarily left over till next week, owing to the lack of time. Among those are the report of the Burkhardt-Besser match, shot at Audubon Park, Dec. 22, won by Mr. Besser by a score of 93 to 89. Mr. Burkhardt challenged Mr. Besser for another match, $100 to $500 a side.

Mr. P. A. Jeanneret, captain of the Boiling Springs Gun Club, sends us notice that on Jan. 2, on the club's grounds, in Rutherford, N. J., the Boiling Springs handicap will be held. The conditions are 100 targets, $5 entrance, targets deducted at 1½ cents; bird allowance. Rose system will govern the division of the moneys. Nobody barred.

Messrs. L. G. Duff Grant, secretary, and F. W Jones, chemist, of the Smokeless Powder and Ammunition Company, of England, arrived on the Teutonic on Wednesday, Dec. 21. They were detained two days in the heavy fog which enveloped New York at that time.

At Watson's Park, Chicago, Dec. 20, the Chicago challenge trophy was the object of contest between Messrs. E. C. Rice and E. S. Rice, the latter winning. The score:

E. C. Rice, 37, 5 .....2221002020022010220000011012201—17
E. S. Rice, 30, 0 .....2221112101022112122112111 —23

Mr. Chas. H. Bamberg, secretary of the Buffalo Audubon Gun Club, Buffalo, N. Y., sends us notice that the club has claimed the week commencing on June 7 for the New York State shoot, which is be held under the auspices of the Buffalo Audubon Gun Club.

The Reading handicap, at 25 live birds, $10 entrance, $150 guaranteed, to take place Jan. 18 next, is under the management of Mr. Arthur A. Fink, 426 Franklin street, Reading, Pa., to whom all inquiries should be addressed.

A team match at 10 live birds, $25 a side and price of birds was shot at Watson's Park, Chicago, on Dec. 23, with the following results: Checola's team—Mareviglia 5, Simonetti 8, Checola 7, Murphy 6—26. Dr. Peters' team—Grabow 5, Gackle 6, Dr. Peters 6, Helkus 3—20.

As will be noted on referring to Mr. Edward Banks' communication in our Trap columns, Mr. R. O. Heikes has promptly accepted Mr. E. D. Fulford's challenge to contest for the E. C. cup and the inanimate target championship.

There are three events in the Brooklyn Gun Club's live-bird invitation shoot on Jan. 10, at Dexter Park. No. 1, 5 birds, $3; No. 2, 7 birds, $5; No. 3, 10 birds, $10. Handicappers, Messrs. Edward Banks, Jacob Pentz and W. R. Hobart.

Capt. A. W. Money, who had a severe attack of cold from exposure in his recent live-bird match, is recovering rapidly. No shooter is more popular and none has been so much missed about New York the past few weeks.

Mr. J. A. R. Elliott, (who shoots a Winchester truly) hale, ruddy and irrepressible, is in New York for the holidays, and is enthusiastic in the matter of matches for 1899.

The regular shoot of the Endeavor Gun Club will be held at Marion, N. J., on Jan. 2, commencing at 10 o'clock A. M.

We are heartily pleased to learn that Admiral Courtney is now recovering from his severe attack of illness, which at one time had symptoms of developing into pnuemonia.

Messrs. J. Hildreth and A. J. Cameron, traveling representatives of the Winchester Repeating Arms Co., were in New York in time for the Christmas season.

Mr. Irby Bennett, of the Winchester Repeating Arms Co., returned to Memphis after the Interstate Association meeting to pass the holiday season there.

Conveyances will be on hand to convey visitors from the trolley cars to the East Side Gun Club's grounds, Foundry street and Plank Road.

WESTERN TRAPS.

Mr. Smith Explains.

CHICAGO, Dec. 13.—*Editor Forest and Stream:* For the benefit of my friends, some of whom took the article in your paper of Dec. 3 as a joke, but especially for those who looked upon it in a more serious manner, I wish to answer by stating the case just as it is. After the shoot Thanksgiving Day several members of the club, including Mr. Duryea and myself, gathered around a table for refreshments. During the conversation Mr. Duryea, who did not seem pleased with his day's performance, offered to shoot any amateur in Chicago or the West for $500, 100 birds. I made the remark that he could easily be accommodated, when he offered to give me 25 dead birds in 100 and shoot 100 for $50 a side. I, not knowing of the technical point taken, accepted, shoot to take place next day. I was informed next morning that the game was for him to shoot at 100 birds and I to shoot at 75 birds, which was not any handicap for me whatever. I supposed we were both to shoot at 100 birds, I to have 25 dead, which would be about an even match between us. However, I did not think any advantage would be taken, and was on hand to shoot. Immediately upon my arrival Mr. Duryea proposed to shoot at his 25 birds first. Seeing that it was his intention to take advantage of the technical point, I refused to shoot. I did not enter into any controversy, as I did not think it necessary. I offered to pay Mr. Duryea for any expense he had been to in the matter. You can readily see my position, when I tell you that I have only been shooting three seasons at the traps, while Mr. Duryea has had a life's experience, and it was not my intention to allow him to catch me in any of the tricks of the game.

F. M. SMITH.

Proposed Big Western Circuit.

CHICAGO, Ill., Dec. 24.—An interesting enterprise was started by the energetic men of the Limited Gun Club at Indianapolis this week, and it is very likely that it will be put in force in whole or in part during the next fall season. The plan proposed by Mr. Hearsey and others, and fully discussed by representatives of different cities attending the shoot this week at Indianapolis, is to get up a grand Western trap circuit, to begin late next summer and to last until winter time, covering seven different cities. The schedule laid out is as follows: Detroit, third week of August; Chicago, fourth week of August; Indianapolis, first week of September; Dayton, second week of September; Cincinnati, third week of September; Nashville, fourth week of September; St. Louis, first week in October. This order was thought the best possible after considering probable weather, the fall hunting seasons, etc. This will give these different towns long advance notice on dates, and it is likely that the idea will receive immediate support by most of the cities named. Jack Parker promised for Detroit, Rolla Heikes for Dayton, and John Lilly for Indianapolis, on the above dates. What can Mr. Watson do for Chicago on this head? Cincinnati can almost be promised, and very likely St. Louis would fall into line. This circuit would hold together the best of the Western shooting talent, and in a way guarantee the success of every shoot on the circuit. Let us have this thing adopted and make a big success of it.

Grand American.

Sentiment at Indianapolis was divided this week on the question of money divisions in the Grand American Handicap, the decision on this head having been learned at Indianapolis. Some were in favor of letting in a larger number of guns, but I think the great majority of those present were quite against the class shooting idea, than which nothing could be more injurious to the Grand American, and one might almost say more degrading to the sport in America. A number of those speaking on the matter held to a strict high gun basis, on the ground that we are entitled to one big finish event during the year. This always seemed to me the only sporting view possible of this thing, though I do not look at it from any business basis. There were some of the boys who surprised me by coming out flat-footed for more moneys and less risk. I am very much afraid sometimes when I pause to reflect, that I shall have trouble in my life-work in reforming the trap. How the trap shot does love to get into a pot! Mostly he would rather have half a pot than take any chance of having no mun. I would like to know where the spirit of '76 is going to in this country. Our shooters to-day are all scared and apparently all in need of remuneration. The division which promises the most remuneration is the best system in the eyes of the average tournament man, and a vote of the shooting fraternity would no doubt show that plainly. Yet the Grand American could get along very tidily without some of the voters. Anyhow, as the Irishman says in the play, it is settled now. We shall have a large crowd of Western shooters there next spring, and indeed we would have had a large crowd there on almost any system that the management could have suggested. The West is no vest-pocket borough. If our folks want to shoot, they are going to shoot, and it may be desirable to watch their smoke a few lines. The West is due to win again.

Boston Gun Club.

WELLINGTON, Mass., Dec. 23.—The Boston Gun Club's initial shoot was well attended despite the somewhat poor weather conditions. While not exactly raining, it gave promise to, and the thick fog which closed in for the whole afternoon rendered the shooting conditions a little peculiar, the slow man behind the gun getting much the worst of it. A target 30yds. away was exceedingly small, if not wholly lost, and after that it was a case of guessing. For a first shoot, however, the scores will bear inspection. In the Christmas goose event, 25 targets, 15 known and 10 unknown, the following scores were made: Gordon 21, Dennison 21, Miskay 21, Leroy 20, Johns 19, Hollis 19, Sheffield 18, Howe 18, Leonard 18, Woodruff 13, Barrett 12. The tie was shot off in next event: Miskay 8, Dennison 7, Gordon 7. Scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	6	10	5	6	15	10	10	10	10	10	10
Sheffield, 16	8	8	3	8	4	2	12	6	6	6	7	9	7
Miskay, 18	6	3	3	10	4	3	12	9	8	10	8	6	10
Leroy, 21	8	7	1	8	4	4	13	7	6	10	..	..	..
Howe, 17	6	6	3	8	4	2	11	7	6	6	6	7	..
Barrett, 17	7	9	4	10	2	4	9	3	8	7	..	..	..
Leonard, 16	9	7	3	9	3	3	12	6	9	8	..	..	..
Horace, 18	4	..	4	4	2	4	8	..	3	6	..	..	..
Gordon, 17	9	8	..	6	3	4	12	9	7	4	10	7	10
Woodruff, 17	6	5	..	8	3	3	9	4	8	10	9	8	5
Johns, 16	8	..	..	7	4	2	11	8	8	..	..	..	..
Dennison, 16	6	10	..	9	2	3	12	9	7	7	9	8	7
Hollis, 18	7	..	..	8	4	3	11	8	6	5	7	4	7
Sewall, 15	..	..	..	..	..	..	..	5	3	4	7	3	7

Events 1, 4, 7, 9, 11 and 13, known angles; 2, 5, 8 and 10, unknown; 12, reverse; 3 and 6, pairs.

First contest individual prize series, 21 targets, 10 known, 5 unknown and 3 pairs:

Trap around Reading.

READING, Pa., Dec. 17.—Manager Arthur A. Fink, of the Reading handicap, to be shot Wednesday, Jan. 18, 1899, reports as having thus far received nine entries, and of the nine six are from shooters out of town. Among the nearby shooters who expect to enter are Trumbauer, of Royersford; Benner and Wien, of Boyertown; Irwin, of Pottstown; Keystone, of Lebanon; Clouser, of Gibraltar; Wertz, of Lime Kiln; Spatz and Hainly, of Sinking Spring; J. T. and Hiltebeidel, of Bingen; and Coldren, Harrison, Jack, Schmeck, of Reading. The management expects to have in all about forty entries, and therefore has been buying up birds from all parts of the State. The shooting grounds can easily be reached from Penn street, Reading, by taking the car with the red flag, going east, which runs direct to the entrance. The event is open to the world, being at 25 live birds, $10 entrance, birds extra, $150 guarantee, $75, $50, $25; three high guns; but if two entries over fifteen are received $20 will be given fourth high gun, after which all remaining money will be added 40, 30, 20, 10 per cent. to the above purses, four high guns. Entries close Jan. 17, 1899, and must be accompanied by $2.50 forfeit. Entries will be received up to 12 M. on day of shoot, but all entered after Jan. 17, 12 M., must shoot scratch, 30yds. Handicaps 26 to 30yds. Send all entries to Manager Arthur A. Fink, 426 Franklin street, Reading, Pa.

Dec. 17.—The members of the South End Gun Club, of this city, held a practice shoot this afternoon on the club grounds. The next shoot for the club badges will be held Dec. 26.

A new gun club is to be organized in this city about the first of the new year, and from present outlook there will be about fifty charter members. It is the intention of the club to erect a grounds suitable for live-bird contests, and as Mr. Gus Resh, proprietor of Somerset Hotel, situated in Berne Township, right across the Schuykill River from the city, which is easily reached by trolley cars, is one of the prime movers of the new organization, and as he has kindly offered an acre of ground for the new shooting grounds, it is hoped that when they begin the committee will visit different grounds of note and build a live-bird shooting park that the Reading sportsmen can be proud of. Among the gentlemen interested are some of Reading's best live-bird shots.

Boyertown, Pa., Dec. 14.—At a meeting of the Boyertown Rod and Gun Club, of this place, it was decided to hold their annual fall target shoot Thursday, Dec. 29, beginning at 10 A. M. The tournament committee, consisting of Capt. Wien, Benner and Schealer, reported as having secured Arthur A. Fink, of Reading, to manage said tournament. The Boyertown Club deserve the patronage of all target shooters in this section of the State, as for the past four years by their hard, earnest work they have restocked the woods of southern Berks county with quail, and are very good help to the game warden of the State for this district. Targets will be thrown at 2 cents each, Sergeant system, two traps being set in a pit and changed different angles every target. The programme will consist of sweeps of 10, 15 and 20 targets, with an entrance fee that is easy for every shooter's pocket-book.

Philadelphia Trap Shooters' League.

PHILADELPHIA, Dec. 17.—The tenth monthly tournament and team match of the Trap-Shooters' League was held to-day under the auspices of the Southwark Gun Club on the grounds of the Silver Lake Gun Club. For the whole series of shoots the Southwark Club wins first prize and Roxborough second, a tie exists between the Roxborough and Independent clubs for the E. C. trophy, which is to be awarded to the club winning first place the greatest number of times. This tie will be shot off at a special league shoot, which will be held on the grounds of the Clearview Club on Jan. 14.

DUSTER.

Audubon Gun Club.

BUFFALO, N. Y.—This was an ideal day for trap-shooting, and it was taken advantage of by the members of the Audubon Gun Club. The eighth contest for the R. H. Hebard trophy was the main attraction on to-day's programme. This event was won by U. E. Storey, who scored 25 out of 30, with 5 added, making him 30 total. This event was No. 5 on the card. No. 4 event was the club badge shoot; Dr. E. S. Carroll won Class A badge, T. B. Walkers won Class B, and U. E. Storey won Class C after shooting off tie with J. E. Lodge. No. 6 was at 7 live birds. E. N. McCarney won first money with 7 straight, E. C. and C. S. Burkhardt divided second with 6 each.

On New Year's Day, in addition to the Audubon Gun Club's regular programme, there will be a big handicap at 25 live birds for a beautiful trophy valued at $150, donated by Clinton Bidwell, and will be known as the Clinton Bidwell challenge trophy well, and willl be open to any shooter belonging to any organized club in the city. The committee having this event in charge are E. N. McCarney, C. S. Burkhardt and L. W. Bennett. Conditions, with full particulars, will be announced later.

J. J. Reid, president of the Audubon Gun Club, called a special meeting last Saturday night at the club rooms, 21 West Eagle street, for the purpose of appointing committees, etc., to take charge of the State shoot, to be held under their auspices in June next. The meeting proved a very enthusiastic one, and if the same spirit continues among the members the shoot of 1899 cannot help to be a memorial one in these events. The donation list was opened up, and from seven members present it was started with $425 in cash and $350 in merchandise prizes. The following chairmen were appointed by the president for the respective committees, which alone is assurance of a grand success: Executive Committee, Charles S. Burkhardt; Transportation, A. J. Barnes; Hotel and Rates, John A. Kennedy; Reception, Jas. J. Reid; Live Birds, L. W. Bennett.

CHAS. J. MOYER.

E. C. Championship Contest.

NEW YORK, Dec. 24.—*Editor Forest and Stream:* I have just received from Mr. R. O. Heikes an acceptance of Mr. E. D. Fulford's challenge for the E. C. cup and the inanimate target championship. Mr. Heikes requests me to notify Mr. Fulford that he is perfectly willing to shoot the match at some Eastern point, and suggests the grounds of the Keystone Shooting League, of Philadelphia, Pa., which are located at Holmesburg Junction, P. R. R., as a suitable place for the shoot. Mr. Heikes names Saturday, Jan. 21, 1899, as the date, and 1:30 P. M. as the time for the match.

It will be well for me to state that I have been in communication with Mr. W. N. Stevenson, of the Keystone Shooting League, with a view to having the shoot held on his club's grounds, provided Mr. Heikes was agreeable to shoot the match near here, and have received a favorable reply from him. There is therefore little doubt but what the match will be shot at Holmesburg Junction, as above.

EDWARD BANKS,
Sec'y American E. C. & Schultze Gunpowder Co.

Limited Gun Club Tournament.

INDIANAPOLIS, Dec. 23.—The weather clerk and Santa Claus made strong combination against the second Grand Central handicap tournament of the Limited Gun Club, of Indianapolis, this week. The club had gone to great pains in arranging its five days' shoot, but on four days out of five the weather was beastly. Moreover, the dates finally selected brought the shoot on the week before Christmas, which is hardly a good time for such business. The average shooter, after the fashion of the Cadi, wished to have a little Christmas of his own, and moreover he is sometimes obliged to choose between the cashier's window and the stockings of the loved ones at home. Lastly, a good many of the shooters in this part of the country had dropped some money at John Watson's shoot and at Kewanee earlier in this week. I presume that the aggregation of regulars who struck Indianapolis Monday morning made up the worst broke crowd that ever went to a shoot. They only had about $6 or $8 between them, and they borrowed this around cheerfully until drafts and letters from wives and families reached Indianapolis. The first half of the week was mighty economical. John Watson and his pigeon game have taken about all the good money out of circulation for this fall. Along toward the close of the week the combination began to receive money from the cashier and from the "house," and things were a trifle livelier about the Grand Central Hotel.

If the crowd which turned out proved only half what it should have been, the fact certainly cannot be attributed to any lack of preparation or care on the part of the management. The Limited Gun Club does things on no half-way basis. The new grounds are easily reached by fast trolley, and are well suited to club house purposes. The club house itself is splendidly arranged, and it boasts a vast fireplace, fed from the natural gas lakes which lie under Indiana. This is the first time I ever attended a tournament where there was a big open fireplace, and now I do not want to attend any other kind. The boys would come in out of the cold and gather in groups about the fire in the most homelike way. This contributed much to the perfect sociability of the tournament, and after all, money is not the only thing. I do not remember ever to have passed pleasanter days at a shoot, in spite of the inclement weather. One feature much appreciated by the shooters was the good, warm lunch provided in the club house each day, and which was served without charge. This shows alike the hospitality and the hardihood of the management, for a crowd of hungry shooters is no sinecure at a dinner table.

Mr. John Lilly, manager, received the warmest encouragement and approbation for his efficiency in the hustling, and he was ably assisted by Messrs. Beck and Tripp, of the tournament committee. Mr. Marrott, president, was also everywhere useful, and so was Mr. H. T. Hearsey, the able secretary. Not a great many of the local men came out, but those who did appear were an awfully good sort. Mr. E. H. Tripp shot a good clip all through the week, and was picked as winner of the handicap on Friday, though that fell out otherwise. Dr. Britton, the old-time sparrow shot, came out only for the targets, though he visited later in the week. Of the non-residents quite a number were on hand. Tom Donley, of St. Thomas, Ont., and Secretary Height came all the way from across the border to attend this shoot. Jack Parker, of Detroit, came in their party, and they all proselyted for the big St. Thomas shoot. I should like to say to all who have not already learned that fact, that Mr. Donley is a mighty pleasant man, something of a shooter himself, and will give a rattling big shoot. There was a man named Harvey McMurchy, claiming to represent the Hunter Arms Co., who was also present, and who figured somewhat in the proceedings. Jack Winston was on hand, but entered only in the Friday handicap. Tramp Irwin, of the Laflin & Rand Powder Co., went down from Chicago. The spidery Charlie Young, of Springfield, O., cut a good deal of a swath. Mr. Emil Werk, of Cincinnati, and Mr. Ed Rike, of Dayton, made a little heavier total for Ohio than Charlie Young can show on the scales. Rolla Heikes was there, of course, and so was Jimmie Elliott and Gold Dust Fanning, alias Little Bull Seal, alias Sharkey the Lamb, etc. Elmer Neal, the stocky Chicago product, now of Bloomington, Ind., came over and tangled up with the procession. U. M. C. Hallowell, Jr., was strictly in it all the time, and more irrepressible than ever. Billy Schuler, of Cincinnati, gave an example of how nice men grow on the banks of the Ohio, and Charlie Budd, of Iowa, was present, as chipper and blithe as ever. Fred Gilbert came in with Jim Elliott, from Kewanee, Thursday morning. Gilbert was high average at Kewanee, though not so lucky at Indianapolis.

The first day was devoted to targets, the following two days were put in at sparrows, the fourth day was a pigeon day and the fifth day was taken up with the capital event, the Grand Central handicap. The returns show Pop Heikes 6 birds ahead of the nearest competitor in the targets. Charlie Young came out in front as the sparrow champion. McMurchy was high gun in the pigeon game. Reference to the scores in all these styles of shooting will show that the Limited Gun Club puts up a shooter's game in all particulars. The grounds, while pleasant, are very difficult shooting grounds. Back of the outer boundary arises a sharp hill, surmounted by a fence, the whole making a very difficult background.

Monday, Day, Targets.

There were eight 20-bird races, $2.50, class shooting, 10 cents of each entry given to five high guns of finishers. Known experts were required to pay $2 each for benefit of eight amateurs finishing. The weather was rainy and chilly and the sport did not begin until 2 P. M., but a record-breaking speed was kept up by the skillful shots participating, and the programme was concluded, some 2,560 targets being shot in three hours. A few unimportant sweeps were run off, the following being the scores of the programme events:

Events:	1	2	3	4	5	6	7	8
Heikes	19	19	18	19	18	19	19	20
Fanning	19	19	20	16	17	17	20	17

Apperson	15	17	15	17	18	16	19	18
Parry	15	16	16	19	15	18	20	17
Tripp	14	15	18	19	15	19	17	17
Young	14	14	19	20	19	16	19	17
[illegible]ington	14	14	16	16	15	..	19	18
Keller	..	9	..	..	..	..	..	..
Thomas	..	..	15	14	..	..	..	..
Griff	..	..	..	..	..	16	..	..

High averages for the day were Heikes 151, Fanning 145, McMurchy 143, Budd 141, Young and Beck tied for fifth place on 138.

esda , Sparrows.

This was class shooting also, and at expensive targets, but the Indianapolis specialty as usual proved so interesting, not to say exciting, that all forgot the money into which the little brown beggars rapidly run. There were four races, 20 birds, $6, 10 per cent. divided among five high guns finishing. The shooting was in strings of ten, from the double sets of Hill sparrow traps, rapid-fire, no retrieving. The local men could give the visitors cards and spades in this game at first, but the good ones early began to catch on to the requirements and made a strong finish. The weather was dull and lowering, and against the brown and gray background the little birds showed but dimly at times. Sometimes the shooter would lose sight of the bird altogether and shoot by guess. Often it happened that the shooter would have to turn and readjust his aim a half-dozen times before he could connect. In several cases birds were killed within 10yds. of the gun, incomers, and I saw two instances, of Hallowell and McMurchy, where the birds were struck full and so close to the gun that its body was entirely blown into fragments, only a puff of feathers being carried on with the load. Much laughter and cheering attended the progress of the sparrow shooting. The trapping was rapid and efficient. A preliminary sweep, 10 sparrows, $2, was divided by Ed Voris and McMurchy, straight, Hall and Rike 9, Young, Irwin, Heikes and Werk 8. There were two miss-and-outs, the first won by Werk, Budd, Tripp and Young; the second by Tripp, Voris, Young, Beck and Neal. A little pigeon sweep was also made up, handicap, 10 birds, $5. Messrs. Lilly and Heikes placed the men. The birds were a clean lot of goers. Tripp, Budd and Beck were the only three men who killed 10 straight. Following are the scores of this extra.

Tripp, 29	2222112222—10	Voris, 29	212211*121— 9
Beck, 29	1112122222—10	Young, 30	2212222202— 9

Werk	21012101020200100000— 9

ws.

The attendance picked up, but the bad weather and bad light made a good many reluctant to risk their money in the game of hide and seek with the sparrow bird. The entry dropped off considerably. Heikes and Young had mishaps which set them back a little in their shooting, but Ed Rike pulled up strong. The glory was mostly monopolized by Tripp, who killed 62 sparrows and pigeons straight, a most remarkable performance on these grounds, which are by no means easy. A couple of minor sweeps as usual filled in the early and late hours. Cooper won a miss-and-out with 5 kills. A second live-bird sweep was a handicap, made up as below:

Fifteen-pigeon handicap:

McMurchy, 31	111111122212121—15
Cooper, 28	21122212112222—15
Tripp, 29	22101211221212l—14
Young, 30	21122221212 2*22—14
Hallowell, 29	1022211212121l2—14

Neal	21111010002101221011—14
Coons	00120020111000211002—10

Third event.

Fanning	11112111120211111121—19
Heikes	12101122111111111121—19
Young	11211222111112011211—19
Tripp	20110211112121221111—18
Neal	21111111210111211202—18
Budd	12011002111221111111—17
McMurchy	21121121021101210211—17
Hallowell	02010121201111111221—16

Fourth event:

Fanning	12121111111101121111—19
McMurchy	12222101110121111111—18
Young	11012111011211111111—18
Budd	22221112012110210112—17
Heikes	12221202111110212210—17
Hallowell	11110211112101111110—17
Tripp	12121201002111120221—16
Neal	01210122112112111100—16

The comparisons of averages on sparrows for the two days were interesting, five men being bunched as closely as possible and still be apart. On the two days' total Young was first, 143 killed out of 160; Tripp second, 142; Budd third, 141; Heikes fourth, 140; Fanning fifth, 139. Mr. Lilly in behalf of the Limited Gun Club presented Mr. Young with a handsome glass loving cup as a souvenir of his success.

Thursday, Fourth Day, Pigeons.

The day was dark and gloomy, with occasional rain. The crowd was small, but pleasant, and the circle around the fire was a jolly one. At lunch Mr. Lilly read a letter of regrets from Tom Marshall, who has been sick and temporarily retired. Regrets were sent him. The shooting was steady in spite of the weather, and the first event called out fourteen of the faithful. The programme called for three events: No. 1, $7, 7 birds, high guns; No. 2, 10 birds, $10, high guns; No. 3, 10 birds, $10, class shooting, three misses out. All guns at 30yds. Bird money refunded. Fred Erb, of Lafayette, with three good retrieving dogs did all the retrieving. Following are the scores:

First event, 7 pigeons, high guns:

Gilbert	1121121—7	Young	0222112—6
Tripp	1222222—7	McMurchy	1201111—6
Elliott	2121222—7	Parker	1120222—6
Fanning	1112122—7	Rike	2222*22—6
Irwin	1212112—7	Cooper	012120
Werk	1212212—7	Heikes	00
Hallowell	2212022—6	Budd	00

Second event, 10 pigeons, high guns:

Hallowell	1222112112—10	McMurchy	1101111211— 9
Budd	2211222111—10	Werk	2101121112— 9
Young	1112122222—10	Irwin	2212201222— 9
Cooper	2212212221—10	Lilly	2220222222— 9
Heikes	2212212221—10	Elliott	2121100
Rike	2221211112—10	Fanning	020
Neal	2222222222—10	Parker	1200
Tripp	2212210212— 9	Donley	20120
Gilbert	1212202111— 9		

Third event, 10 pigeons, $10, class shooting:

Gilbert	1111221122—10	Rike	2122210221— 9
Young	1222222222—10	Neal	2022222222— 9
McMurchy	2211111222—10	Donley	2222112202— 9
Marott	1112221222—10	Tripp	2120120222— 8
Irwin	2122111112—10	Elliott	022122222*— 8
Fanning	2022221121— 9	Budd	1212010112— 8
Hallowell	2121021222— 9	Schuler	2022122210— 8
Cooper	1111122220— 9	Parker	0221020
Werk	1221111*22— 9	Creep	00100
Heikes	2022222222— 9	Parry	220200

The last event of the day was watched with great interest. President Marott showed the sort of shooters the Limited Gun Club has when he went out with 10 straight, alongside McMurchy, Irwin, Gilbert and Young.

At close of the live birds, the boys gathered again at the sparrow traps and shot till darkness stopped them. Scores:

Second extra, 15 sparrows, entrance $3: Young 15, Tripp 14, Neal 13, Gilbert 13, McMurchy 12, Cooper 12, Budd 12, Heikes 12, Hallowell 12, Donley 11, Parker 10, Griff 10, Werk 10, Schuler 8, Parry 7.

Third extra, 10 sparrows, entrance $1.50: Neal 10, Tripp 9, Gilbert 9, Parker 9, Griff 8, Fanning 6, Schuler 6, Donley 5, Werk 4.

By this time there was more money getting into circulation among the gang, and Thursday night at the hotel was one of memorable features. The oldtimers are getting gray and wrinkled, and their "hide is wore off in spots," as private Mulvaney says, and some of them are "married men besides," but they are ever young in their high animal spirits, and no set of youngsters could by any possibility have made more noise or gotten up a rougher rough house than they did in Jim Elliott's parlors, where a quiet comparison of colored papers was going on. Hallowell, Parker, Donley and other athletes gave sample movements in athletics, and the fun waxed high till past the little time of day in the morning. At 10 o'clock that night there was no light seen in the suite occupied by Heikes and McMurchy, and it being suspected that these two tender plants were going to bed early in order to get an advantage over their confreres in the big race of the following day, the bell boy was sent for a pass key, the rooms were entered, not once, but several times, and they were forced to smile and look pleasant, whether they felt that way or not. Young, Budd, Fanning and a few others stood out for early hours and regular habits. Opposed to them were "de gang in 94," as the bell boy called them, who insisted that a man could shoot just as well without so much sleep, if he was really a shooter, like themselves. The two theories were tried out the following day, though the conclusion remains in doubt and subject to further experiment.

Friday, Fifth Day, the Grand Central Handicap.

It had been growing colder on Thursday evening, and by night the rain stopped and signs of clear weather appeared. Friday morning dawned quite clear, bracingly sharp and not chilly, and it was an ideal day for the big event of the annual handicap. The birds were good, and more than good. The peculiar flight of these grounds is not to be mastered at once. For this reason it was thought a local man might pull out ahead, though toward the close the phalanx of the oldtimers, the "regulars," the "gang," began to show up together, bunched as usual after a long pull at the traps in any sort of race. Not without loss, however, did they get so far along, and some failed almost at the goal. The first half-hour of shooting showed gaps already beginning, and from the way the birds flew it was easily seen that some one was going to have a big proposition on his hands that day. At the first round down only thirteen men had entered, but the lists were held open till noon, and by that time the purse of $600 had filled, there being twenty-five entries in all. It was one of the most closely watched races one would be apt to meet, and it was for a time anybody's race. The handicapping was satisfactory, and the trapping service rapid and good, the Hill pigeon traps being used. Mr. Lilly refereed, assisted by Jack Parker.

The sifting began early in the game, it being understood that three misses sent a man to the barn, while one miss made his chances slim. Elliott could not lay up any money at this, for he missed the first bird he got in the opening of the shoot. At the second round there was some wonder expressed at the way things were going, for Tripp, Heikes, Young, Budd and Neal all fell down. In the third round they all got through except Willie. Thus it went till at last only McMurchy, Hallowell and Fanning remained straight. Of these, Fanning had been an adherent to the early hours movement, Hallowell was a late hours man, and McMurchy was an early hours man who had had his intentions of going to sleep frustrated by the energy of his friends. The early bed-time theory was somewhat jarred when Jack Fanning missed his 14th, 15th and 16th birds, one after another, and sat down very much perturbed. Hallowell retired from the tie with McMurchy at the 14th bird, and when Fanning went out it left McMurchy in alone, and he was watched with much interest by his friends, who would never have wept if he had missed his 17th bird, thus letting them all in again. He caught a very extraordinary high and fast bird, which he could not get above, and as he said he never did intend to shoot till he got the bird covered, it was 50yds. away before he let go his right. This stopped the bird and the left trimmed it up, a very sensational bit of work, which set the public wild and caused McMurchy stock to go up. He still had luck with him, for the next bird was a little hopper, which was refused. The alternate turned out an awful one, one of the low blue snakes that skim along the ground and go like a streak. It got a big start almost in a flash, and the biff-bang reports that followed it were none too soon, for the bird fell over 35yds. beyond the traps. This broke the hearts of all the men who would have "sympathized" with Mac if he had missed it.

Gilbert "went to the barn" at the 17 hole. Neal shot a good race, and so did Lilly. Pop Heikes sawed wood and never missed any after his first lost bird. Donley and Hallowell were just at his heels, with Elliott, Budd and Neal all scoring 23. Erb began strong, but went to pieces. Ed Voris was the first man to put up his gun, his three lost birds falling dead out. Willie was the next victim, and then Cooper and Parker looked briefly at 5 birds, and had leisure for the rest of the day. Young, Werk and Marott sighed and said good-by, and at the 15 hole it seemed as though all the high guns needed were ahead of the crowd and going to win out. Just on the "danger line" were Hallowell, Budd, Donley, Irwin and Heikes, who had dropped but one bird each.

At the 23 hole there were eight men in: Irwin, Heikes, McMurchy, Elliott, Budd, Neal, Hallowell and Donley. Irwin missed this bird, but was still left in. At the 24 hole Budd missed, but the solitary straight, McMurchy, still declined to miss, and this left the 23s all in, as the money was ten high guns, and only eight high guns were left above the 22 places. Then began the tedious work of shooting up the back scores, where provisional dropping out had taken place. Gilbert and Fanning went again to the traps with bright, glad smiles on their faces, though the chances of some of these relit lights were much marred by the fact that they missed their last birds. Erb, Winston, Fanning, Beck and Hallowell each missed his last bird! Under the circumstances, they were not accused of dropping for place. McMurchy alone pounded along, shooting in grand style and with perfect judgment, under conditions certainly not favorable. The entire population was out at the score when he shot at his last bird, which he killed in good shape, amid a roar of applause, thus landing one of the most prized honors of the Western live-bird world. McMurchy was called to the front of the club house and Mr. Lilly made him a nice little speech, while the "colors were lowered" (by a string) from the balcony. The said colors are black and orange, the "colors of the blue rock," as Mr. Lilly said. A large rosette of this combination was affixed to a silver plate, and this was the trophy of the handicap, one hard to earn. At the same time Fanning was ordered to the front and was

given a similar badge as token of his winning the same honor at the first handicap last year, which he did just as McMurchy did this year, with 25 straight alone. The two made suitable responses to the felicitous presentation speeches, and were gaily applauded by the gang, who had now forgotten their sorrows at falling out of step with the procession.

First place, won by McMurchy alone, netted $112.50. Second place, won by Heikes alone, was $93.75. Third place, divided by Irwin, Elliott, Budd, Neal, Donley and Hallowell, paid $56.25. In the shoot-up for the 22 men, Tripp, Young and Gilbert appeared at the close and divided $81.25, the sum of the two 7 and 6 per cent. moneys. Following were the scores:

The Grand Central handicap, $600 guaranteed, all surplus added, 25 pigeons, $25, birds extra, ten or more high guns; distance handicaps, 26 to 31yds., three misses out:

Associate Members, Limited Gun Club.

Shortly after the close of the handicap shoot Secretary Hearsey announced to the press that he had succeeded in making a fine start on a list of associate members for the Limited Gun Club. These associate members are merely non-resident members who secure membership privileges, and the idea, while common in social clubs, is not found elsewhere, to my present recollection, among the shooting clubs of the country. The Limited Gun Club is a wealthy and well-provided concern, and it is a privilege to belong to it, even on the basis of an infrequent attendance. The clause in the by-laws covering this part of the club policy is thus framed:

"1. It is hereby provided that parties other than stockholders may become associate members of this Association, without votes and without sharing in the profits of the Association, by making written application to the secretary. All applications to be passed upon by the board of directors.

"2. Business concerns on payment of $10 yearly will be entitled to associate membership for each partner. Individuals by the payment of $5 yearly will be entitled to associate membership.

"All associate members will be granted the same shooting privileges and club house accommodations as stockholding members. All dues of said associate memberships are due and payable May 1, annually.

"Application for associate membership received on or after July 1 will be rated at $1 per month for business concerns and 50 cents per month for individuals until the May 1 following, when the regular annual dues take effect.

"A failure to pay above annual dues on or before July 1 of each year will act as a bar to all privileges.

"The Limited Gun Club most cordially invites the trap-shooters of the world, and all others interested in shooting, to join its associate membership, as per the terms expressed above. A list of associate members will hereafter be published in all programmes."

In accordance with the above, the following non-residents added their names to the associate rolls: M. F. Lindsley, Cincinnati; John Parker, Detroit; J. A. R. Elliott, Kansas City; Emil Werk, Cincinnati; J. S. Fanning, Batavia, N. Y.; Fred Gilbert, Spirit Lake, Ia.; R. O. Heikes, Dayton, O.; C. W. Budd, Des Moines, Ia.; H. McMurchy, Syracuse, N. Y.; J. J. Hallowell, Bridgeport, Conn.; Elmer Neal, Bloomington, Ind.; C. A. Young, Springfield, O. This is certanly a pretty strong list, and if it should come to a show-down with any foreign concern the Limited Gun Club could put up a rather stiff team, if associates were not barred.

Ends

After the close of the shooting on Friday evening, which was not till darkness was too thick for any one to pretend he could see a sparrow in the final sweeps, President Marott mounted a chair and called the house full of shooters about him, whereupon he made a neat speech of felicitation, and with the thanks of the club and applause of all present presented Mr. Lilly with a handsome cut-glass dish, with the advice that Mr. Lilly give this to his wife, so that he might spend yet more time working for the club.

Milt Lindsley, of the King's Smokeless, and Mrs. Lindsley came over from Cincinnati Thursday, and both were at the grounds for the Friday handicap. Other ladies of the club made Mrs. Lindsley's stay pleasant, and the afternoon was pleasantly spent by the balcony spectators.

Hoosier is the assumed name of a well-known Indiana man, who gives big shoots and is a big-hearted man, and a rattling good shot. He divided time between his work and the Indianapolis shoot, but I can't give his name for business reasons; and besides everybody knows it already!

The long runs of McMurchy at this Limited tournament put him well along on what has been a remarkable run of good shooting on his part this month. Counting in the birds he shot at John Watson's shoot, with those he shot at Indianapolis, Mac had, up to the close of the Grand Central handicap, which he won, shot at 196 birds, and killed all but 8. This does not include any d. o. b. birds, but only those actually scored. "An' what do you think the blame pup did after he was through the handicap?" I heard Charlie Budd remarking affectionately to a friend. "Why, he goes out there and kills 9 more straight in the dark!" This would make only 8 birds lost out of 205. This was not summer shooting, but winter work, and on birds the best that have been seen at any two shoots in the West this year. It only clinches what Mr. McMurchy's friends claim for him, that if he didn't stop to sell a car lot of guns now and then all the other boys would have to take his dust. "I reckon I can't associate with you people much longer," Mac said to the gang banteringly. "I want to travel with shooters." And they fell on his neck.

The best presswork done on this event by the local papers was that of Hal Reed, of the News, once of the K. C. Star. Mr. Reed knows the trap game and is conscientious in his work—a very cheering thing to see.

Tom Keller blew through Indianapolis early in the week, but I did not see him. Tom has sold about twice as much King's Smokeless in his territory as the wildest dreams of his employers expected, and he is going to see more, he says.

The hospitality of Indianapolis is proverbial, and was never more nicely illustrated than at this shoot. It was really a most enjoyable, quiet and sociable little time that everybody had, with little of the hurry and hurrah of the big events. To be pleasant, a tournament of two or three dozen entries is big enough, especially if you have a fireplace. The boys all wanted to get to the fire at once.

E. HOUGH.

Interstate Association Matters.

Abstract of Minutes of Stockholders' Meeting.

IN the absence of the secretary-treasurer, E. S. Lentilhon acted as temporary secretary.

The Remington Arms Company was elected a member of the Association.

The manager reported that he had several applications from different gun clubs asking the Association's aid in giving target tournaments during 1899. All such applications were referred to the tournament committee, to be acted upon at the earliest opportunity.

The Association decided unanimously to continue its policy of the past year in regard to the barring of paid representatives, etc., from taking part in sweepstakes or purses at the target tournaments. The resolution which was adopted by the Association at its meeting on Jan. 17 last is still in force for 1899. It reads as follows:

"That all paid representatives, whether paid in shells, guns, money or otherwise, and all those connected in any way with companies manufacturing guns, shot, shells, powder, targets and traps, shall be barred from participating in sweepstakes and purses, but will be perfectly welcome to shoot for targets only and display their goods. The decision as to who such paid men are to be left at all times to the manager, whose decision shall be final.

"Resolved, That the foregoing does not apply in any way to the Grand American Handicap tournament."

Mr. Shaner asked that the Association grant him permission to manage the tournament of the Pennsylvania State Sportsmen's Association, to be held at Erie, Pa., next May. This privilege was willingly accorded him by the Association.

The question of division of moneys in the Grand American Handicap of 1899 was a subject of considerable discussion. President Dressel, Vice-President Bennett and Temporary Secretary Lentilhon all read letters from Mr. E. S. Rice on the point. In answer to a question put to him by one of the members of the Association, the president stated that nothing had been heard either from Mr. Fulford or his petition from trap-shooters praying for class shooting in the Grand American Handicap. It was finally agreed that the division of moneys in the Grand American Handicap should remain practically the same is in the Grand American Handicaps of 1896, 1897 and 1898, the only change made being that the surplus over and above the guarantee of $1,500 will be divided among a certain number of high guns, that number being decided by the number of entries received; three additional moneys being created for each ten entries above sixty. The Association decided also to allow for a division of moneys on the above basis up to 260 entries, agreeing that all further surplus, if any, be divided equally among all the prize winners provided for under the above division.

It was further decided that the Association present the winner of the Grand American Handicap in 1899 with a suitable silver trophy.

The need of a new set of rules governing live-bird and target shooting caused the Association to take the initiative in the way of formulating an up-to-date set of such rules. A motion was made that the president appoint a committee to prepare such a set of rules. The committee was appointed as follows: Messrs. Elmer E. Shaner, Edward Banks, Irby Bennet, W. F. Parker, Ed Taylor and A. W. Money.

The question of a circuit for taget tournaments for 1899 was referred to the tournament committee with instructions not to contract for more than five tournaments during the coming year.

The directors elected by the meeting were as follows: Messrs. J. H. Dressel, Irby Bennett, Edward Banks, W. F. Parker, John L. Lequin, A. W. Higgins and E. S. Lentilhon.

Immediately after the adjournment of the stockholders' meeting a meeting of the board of directors was held.

The officers of the Association were elected as follows:

President, J. A. H. Dressel.

Vice-President, Irby Bennett.

Secretary-Treasurer, Edward Banks.

Executive Committee: John L. Lequin, W. F. Parker, and A. W. Higgins.

Tournament Committee: Messrs. Irby Bennett, chairman; J. A. H. Dressel, A. W. Higgins, W. F. Parker, E. S. Lentilhon and Edward Banks.

Club Organization Committee: O. D. Delano, Paul North and Charles Tatham.

Manager, Elmer E. Shaner.

The tournament committee held a brief meeting after the meeting of the board of directors had adjourned, and decided that entries for the Grand American Handicap of 1899 should close with the secretary-treasurer of the Association, at his office, 318 Broadway, New York city, on Tuesday, April 4, 1899, and that the handicap committee should sit on Thursday, April 6, 1899.

The handicap committee will be appointed later.

No handicaps will be announced prior to Sunday morning, April 9, 1899.

The report of Mr. Elmer E. Shaner, manager of the Interstate Association, is subjoined. For clear-cut thought and broad grasp of the situation, and soundness of views in the trap-shooting world it is an admirable paper. It also possesses points of literary excellence rarely accompanying a report. It is as follows:

PITTSBURG, Pa., Dec. 14.—To the President, Officers and Members of the Interstate Association.—Gentlemen: The following report of the transactions of the manager's office for the season of 1898 is submitted. The statistical data, giving operations in detail will be found in the "Review of Tournaments," a copy of which is annexed.

I am happy to be able to inform you that the season now closing has been, notwithstanding some unavoidable drawbacks, a gratifying success, such as can be appreciated by the members of the Interstate Association in all the broad expanse covered by its work, though trap-shooting was rather quiet throughout the country in general, as were all other sports, owing no doubt to the war with Spain, which made it advisable to the Association to permit the canceling of two scheduled tournaments. As this complication has been happily unraveled, at least so far as the United States are concerned, encouragement is given to increased effort to revive lagging interest and restore the sport to the oldtime maximum, and the present outlook is that it can be more than restored and maintained, all distracting influences being composed.

The same territory worked in 1896 and 1897 was operated in 1898. It is a remarkably good field, but there is still ample room for missionary work, with a certainty that the unparalleled growth of eight years will continue. To those who have labored to promote the welfare of the organization a retrospect cannot be otherwise than encouraging. Having borne the heat and burden of that time, they are now able to enjoy the fruit of their labor.

The resolution passed by the Association barring "paid representatives," etc., from competition for a division of the purse appeared to give contentment and satisfaction to a large majority of contestants, and we are inclined to believe it will prove a good move upon the part of the Association. I suggest that it might be well to revive the matter at the annual meeting for further discussion.

Grand American Handicap of 1898.

As usual, the season was inaugurated by the Grand American Handicap tournament, held at Elkwood Park, Long Branch, N. J., March 22, 23 and 24. The entries received numbered 207, almost ten times as many as attended the initial handicap. This is the largest number of entries ever made in any similar contest, and is a monument to the wisdom and enterprise of the Interstate Association. The arrangements for live-bird shooting at the Elkwood Park grounds are not only unsurpassed by any other in the world, but are unequaled and very nearly unsurpassable. To say more would be gilding refined gold. There is no other field in which enterprise is more fully appreciated than that occupied by the trap-shooting fraternity—liberal themselves, they give it its full measure of approbation when exhibited by others.

Inanimate Target Tournaments.

The inanimate target season was opened at Macon, Ga., with gratifying results to our subscribers. The tournament was held April 13, 14 and 15. The interest taken by local shooters shows that the leaven is working strongly in the South, and that in a short time the Interstate Association will be "coming home rejoicing, bringing in the sheaves." There is no other section in the world of equal size where sporting blood circulates more generally than in the South, but the ravages of the Civil War left the people exhausted financially. They are getting on their feet again. Courteous and warm-hearted by nature, and impetuous, they furnish as good material out of which may be developed trap-shooters as can be found anywhere, and the Association did wisely in resolving to till this fallow soil. The tournament was at bluerocks the first two days, and at live birds the third. This tournament was very successful in all respects, and especially in reviving interest, and our subscribers can rest assured that their bread cast on the waters will return to them, not after many days, but speedily. The local gun club handled its guests in a manner that gave perfect satisfaction.

The second inanimate target tournament on the Association's circuit was held at Brunswick, Ga., May 4, 5 and 6. Though satisfactory considering the circumstances, the attendance was somewhat affected by the unsettled condition caused by the war, and this was the first tournament held after war was declared. All in all, however, it was a success. Interest was renewed, the results were satisfactory to local shooters, and our subscribers have no reason to complain of the manner in which all things worked together for their good.

The third tournament, scheduled for Wilmington, N. C., May 25 and 26, and the fourth event, scheduled for Portsmouth, Va., June 15 and 16, were canceled at the request of the local clubs on account of so many of their members being engaged by the Government to shoot at animate targets in the tropics, and thus unable to devote attention to tournament affairs.

The fifth tournament was held at Meadville, Pa., July 6 and 7. The attendance was very good, especially on the first day, falling off somewhat on the second. The local club estimated that the war affected local entries to the extent of at least twelve. Northwestern Pennsylvania territory is a good one to work, and should receive more attention. The Meadville Gun Club is energetic and does its work without spurring.

The sixth tournament was held at Meriden, Conn., July 27 and 28, under the auspices of the Parker Gun Club. It may be considered supererogatory to say that it was the banner tournament of the season, and one of the most successful ever given by the Association, for it is pretty generally known that the Parker Gun Club never does things by halves. The results for our subscribers were splendid, and everything that the club could do for the comfort of visitors was done. The result was simply what may be expected in Meriden at any time.

The seventh tournament came off at Waterville, Me., Aug. 17 and 18. It was another good one, and much interest was manifested. The local club treated visitors royally, making them wish for many happy returns of the event, and the affair was well handled throughout.

The eighth and closing tournament was held at Haverhill, Mass., Sept. 7 and 8. Entries held up remarkably well, and results were better than expected by the most sanguine. The members of the Haverhill Gun Club are entitled to great praise for the manner in which they worked for the success of the tournament.

Our subscribers may rest assured that their efforts to make the Interstate Association worthy of the support and appreciation of the intelligence of the profession will bear fruit abundantly. Notwithstanding the turmoil caused by the Spanish war during the harvest season of inanimate target shooting, we accomplished good season's work, and with peace and smiling prosperity now assured it is difficult to fix a goal to which we may not aspire if future effort is guided intelligently by past experience. But it will not be obtained without continued effort. Slightly paraphrasing Andrew Jackson, we may say "Eternal effort is the price of success." There is no dead wood in the Association, and there is no presumption in saying that its vitality promises abundantly for the future.

Looking Forward.

We need not, like Alexander of Macedon, weep for want of other worlds to conquer. The field is practically unlimited. The harvest is ripe, and the laborers are comparatively few—few considering the amount of work to be done and the size of territory we may occupy. We should have more subscribers to prosecute the work intelligently, and to get the best results obtainable. There is a great and increasing demand for our services, and this demand should be complied with to the extent of our ability to do so.

Seventh Annual Grand American Handicap.

For this event the preliminary details have all been arranged, contracts signed, etc. It, as is generally known, will be held at Elkwood Park, Long Branch, N. J. I would suggest that the Association guarantee $1,500, as before, and also make provision for adding a silver trophy for the winner of the 1899 handicap.

I am confirmed in my belief that the division of the moneys which prevailed in the handicaps of 1896, 1897 and 1898 will give satisfaction to much the greater portion of those who wish to participate in the tournament. Therefore, I would advocate the adoption of the same manner of division for the handicap of 1899, amplifying it so as to create two places for every ten entries over sixty and up to 250. This will make provision for forty-one shooters to take down money in the event of there being 250 entries.

Considerable discussion has taken place through the columns of the sportsmen's journals regarding a change from the system of dividing moneys which prevailed in 1896, 1897 and 1898. In this connection I would state that the Association has a "record, not a prospectus," and while it should always be found willing to receive suggestions and give them careful attention, it should at the same time feel itself obligated to adopt what appears to be the best method to increase interest and insure best results to all in the country interested. We cannot expect to please every one, and must be satisfied with the approbation of the majority, which I confidently believe we have.

Seeing that entries have grown from 61 in 1895 to 207 in 1898 under the present division of moneys, why in default of irrefragable evidence to the contrary should we make a change? Is it not evident from the result that our system gives satisfaction to shooters generally? I may also add that I have carefully considered all the schemes proposed and found none other to promise so well as the one adopted for the years mentioned, and if there be anything else than "clean sport" encouraged by it I am ignorant of its existence.

Finally, I wish to say that there must come a time when the Grand American Handicap reaches its maximum, and none of us knows that the maximum has not already been reached. Since history began to be written all things human have recurred in cycles, notwithstanding advances in sciences and art, and it is not at all improbable that even the Grand American Handicap may eventually decay. In fact, it cannot continue to grow without ultimately becoming too unwieldy to manage, but should its entries drop to 100 the Grand American Handicap will still be the finest of its kind, for the Grand Prix of Monte Carlo has neither the expanse of territory from which to draw nor the enthusiasm of a nation of 70,000,000 born shooters, but to scale down the principal prize might detract more from the interest than were the

reward a medal worth but $5 or $10. The true sportsman may compete for glory only, but if a money consideration be added it should be worth speaking of or it is less than worthless.

Inanimate Target Tournaments for 1899.

The status quo is very much the same as existed at the close of the seasons of 1896 and 1897. The increase in the number of applications for tournaments is still highly stimulating, assuring us of continued interest and prosperity. The phenomenal growth of interest alluded to in my last report is unabated, but I deem it advisable to supplement and encourage it, as a prosperous organization like ours sets up no frontier to the limits of its operations. The phenomenal progress of the past should be an incentive to further effort rather than a surfeit prescribing a boundary.

Minor Details.

Respecting the duties of my office, I do not deem a review necessary. They have caused a large correspondence, as usual, but it is not of interest to the Association at large.

I am still unable to see any necessity for changing the rule allowing clubs to select such handicap, manner or system of division of purses as they may consider most advantageous in their environment, and therefore counsel a continuance of the same.

The properties of the Association are stored in Pittsburg, fully protected by insurance.

Conclusion.

The several sportsmen's journals, honorary members of our Association, have continued their good work, and are entitled to the highest praise for the faithfulness shown in reporting scores in all our tournaments, as well as publishing matters of general and particular interest in this connection.

In conclusion, I wish to express thanks to our subscribers for the manner in which they have treated me in all our epistolary intercourse, and in this connection I wish to include the members of the various committees, whose aid, advice and gentlemanly treatment I appreciate at full value, and hope that their efforts will be crowned by full fruition.

Very respectfully submitted,
ELMER E. SHANER, Manager.

The Handicap and High Guns.

A REVIEW of the issue between those who advocate high guns and those who advocate class shooting, to govern in the division of the moneys at the next Grand American Handicap, may prove interesting to our readers. We touch on it as an abstract proposition, with the further purpose, however, of showing that the high gun system is sound and that the class shooting system is fallacious as it concerns this event. No argument is necessary to prove that high guns would be a success; some argument is necessary to prove that class shooting is worthy of consideration.

The movement for class shooting was based on the failure of those who killed 23 or less at the last Handicap to win any of the money. The sums of money to be won were large, it is true, but they were large under the high gun system in use. High guns were a success; a change was unnecessary. The Association had assumed all the responsibilities, financial, managerial, etc., and had given it a prestige and importance under its own policy which no other shooting event of America possessed.

The solicitude of the weaker shooters for the welfare of the Handicap seemed to be coincident with the fruits which it bore in the way of the large sums of money to be won.

The shooter of average ability, more or less, was in favor of class shooting, to govern the division of the moneys in the Handicap. It is in accord with average human nature that the average shooter —or better or worse in skill—should discover that the Handicap would be the real thing if the conditions were so adjusted as to fit his personal interests. Of course, the Association was to assume all responsibilities for the future, the same as in times past, if it adopted the average shooter's personal suggestions. The average shooter pointed out, in good faith, that the number of entries would be greatly increased if class shooting were adopted, and thereby it would be so much the more a success. It is to be noted that, while the reasons for the adoption of class shooting were such as theoretically would benefit the Handicap, they were practically such as were best suited to the skill and interests of the average shooter.

A policy, which would increase the number of entries, at first thought appears to be sound reasoning. But when we consider that the increase in numbers, on a basis which cheapens the shoot, lowers its grade of skill, evolving a cumbersome, wearisome competition to the contestants and uninteresting to the public, the matter then assumes a different aspect. Reasoning by analogy from other handicaps and tournaments, the more entries there are in any tournament, the greater is its success; but reasoning from matters of tournaments to matters of the Grand American Handicap is in many ways fallacious.

Let us consider that, first of all, numbers never made the success of the Handicap. Its success was in its distinct unlikeness to other events. It was a success in 1897, when the numbers were less than in 1898. It was a success in 1896, when the numbers were less than in 1897. It was a greater success in 1898 than it ever was before, but it grew into the greater success and its successes were under the system of high guns.

Nothing has been offered as showing why there would not be more entries in the next Handicap than it ever has had before, though, as already remarked, the numbers are not what made its success. As further proving this point, it may be mentioned that three or four years ago there were many shooting events which had a larger number of entries than did the then Grand American Handicap. Who can tell what they were? Who even remembers them? Yet there is no one interested in shooting who does not remember the Grand American Handicap. And why? Because it is and was the best shooting event of America. The public accepted it as such, for it was under auspices which were a guarantee that the money and all else were all that were represented; that it was a sterling competition in all its details, and that the contestants were tried out to a finish. The standards were such that only the very best could compete with any show of success. Let us briefly consider the competition in other sports which have had a greater degree of evolution than has trap competition.

In horse racing, what brings at times 10,000 or 40,000 people within the gates to witness the sport? Why do all the great dailies have telegraph service at the race tracks and have column after column, describing minutely the racing, published at the first possible moment? First of all, the auspices under which such is held is a guarantee that the racing is genuine. Second, it is the best of its kind. There may be but two or three horses in a race, and yet it may be of national interest. It is the quality of the racing and what it represents, for each horse may have beaten hundreds of others, and therefore is not a horse in the sense that all horses are horses, but each is a horse which is racing with records and laurels and high ability associated with him.

Let us suppose now that some truckmen, several thousand strong, were to come forward to the racing management and petition them that the game was too hard for them as it is conducted at present, and that therefore they would like to have the conditions so cheapened that they also could come in with a reasonable chance of winning the money; in return they were sure that they could fill the track with draft horses from all parts of the country; fill it from the wire to the half-mile post so full of horses that it would be the greatest success of its kind that the world ever saw. The management might be disposed to remark that the petitioners did not have quite the correct theory of what constituted horse racing.

There is one principle which is basic alike to all sports which have a view to lasting public approval and esteem—they must be the best of their kind. So it is with football, billiards, athletic sports of all kinds. Only the highest quality of competition is what wins the esteem of the public and engages its permanent interest. Mere matters of numbers may be worthy of consideration to the contestants, but they are of no public importance so long as there is enough to make competition. Whether there are five or twenty-five, or more or less, in a race, the matter of quality is what governs, if it is to have public approval, public appreciation, and a lasting place in the records.

Surely the stockholders of the Interstate Association are to be commended for their wisdom and firmness in persisting in a policy which insures an event of the first importance in the shooting world, rather than one which is of importance merely to the contestants who participate in it.

The shooting interests of America are in a transitional stage. The interests of the Grand American Handicap are not to be measured by the old standards. Its interests are not after the watermelon system, which admits every passer-by to cut off a slice if he but have any kind of an old knife.

The Association in its wisdom threw open the doors to the highest competition that America could produce. There are no restrictions as to make of guns, powders, shells, etc. The winner is he who wins on his merit, and when he so wins he is tried out to a finish. No other kind of winner would be esteemed as a real winner if he won in any other manner. The plaint of the shooter who shot and lost is no part of the event. A plaint is merely an idiosyncrasy, not a principle.

No doubt, judging from the records of the past, and the greater present fame of the Association, the Grand American Handicap of 1899 would be favored with a greater number of entries if it had held to high guns with the old number of the divisions of the moneys. No doubt there will be a still greater number of entries in consequence of the greater number of divisions of the moneys. The great prestige of the Association, however, will not be affected by this slight cheapening of the event, though it would lose its high place as the greatest test of real skill if the cheapening process were persisted in.

As the event has grown to such magnitude, the true policy of the future is to make the conditions much harder instead of easier, about two guns in fifteen, or else an important increase in the entrance fee so as to make it an event worthy of the nerve and skill of those who are the real gladiators of the gun.

1898.

In its general features, the year now closing has been one of gratifying activity in the trap-shooting world. Some tournaments have been but partial successes, a few have been failures; but success and failure now and then are incidental to all other forms of sport, and indeed to all institutions.

Trap-shooting seems to be in a transitional stage, comparing the old order of things with the new, which may in a manner explain its diversity of systems and its fluctuations as to support—the tentative trying for something more equitable and satisfactory to the masses of shooters than what is offered at present.

The popularity and the permanency of the sport are beyond question. Equally gratifying is it that the trend of trap-shooting is so beyond question. Alarmists, who interpret failure here and there as forecasts of its decay, and the changing of systems as being the expedients and allurements of the moment, should consider that changes are a necessity in matters of evolution; that in stepping upward and onward in the march of improvement many old ideas must be abandoned and left by the wayside. It is broadening and moving on new lines of policy, the very opposite of decay.

The Grand American Handicap, in itself, may be taken as an index of the trap-shooting support in America. It too may teach some useful lessons as to what inducements will bring out the shooters in competition. While there are great numbers of them in this great land, tournament managers have had great difficulty at times in inducing them to compete. Even the multiplicity of systems, which have proved so attractive in the past as to theory and so delusive in practice when tested by those who seem to trust to some vague mystic property of systems instead of to skill in shooting systems now in active use, have apparently lost their charms. No system of dividing the moneys will be of any advantage to the shooters who have less than the needed skill. This seems to be gradually understood by them.

The competition is gradually becoming harder, as shots here and there graduate into the expert ranks. Systems, therefore, are less valuable.

Successful as has been the last season under the many conditions affecting it adversely, it, considering the number of shooters in America and their enthusiasm, was far short of its possibilities. No doubt but what the fact that, under the systems in use, the 85 per cent. man is most of the time in the frazzle ends of the money, and that a shooter of less skill is not in it at all to any appreciable extent, has some bearing on the situation. Experts in all parts of the land have so multiplied in numbers that, wherever a tournament is held, there are enough of them present to take the bulk of the money, whichever of the systems in vogue may be in use. Taught by many experiences, the weaker shooters do what men of sense might be expected to do when their chances of success are too remote to be worthy of consideration; that is to say, they refrain from entering. A proper handicap would restore the equity of the shooting and the interest of the shooters.

Many important matches, most of which were for trophies representing one style or other of championship at live birds, have been shot during the year. They excited the liveliest interest among sportsmen. Some of the more important were the contests for the cast iron medal, the first of which was between Heikes and Grimm in early January, at Dayton, O., the former winning by a score of 93 to 90. The second, also at Dayton, was between Heikes and Budd, on Feb. 22; the former again won; score 91 to 82. On Oct. 22 Heikes defended the medal successfully against Elliston, at Nashville, Tenn., by a score of 96 to 94, a very closely and well contested race. This bauble can hardly be said to have any great championship significance. The Du Pont trophy has been several times well contested for, the first time this year being in Brooklyn, L. I., Jan. 15, between Gilbert and Elliott, the former winning by a score of 96 to 91. April 14, Gilbert and Parmalee contested for it at Watson's Park, Chicago, the former winning by a score of 86 to 82. Sept. 24, Gilbert and Elliott again contested for it at Watson's Park, the former scoring 97 to 94. The Star cup was a matter of competition several times, Elliott defeating Gilbert for it at Watson's, April 26, by a score of 90 to 86. On May 6 Elliott held it in a contest with Heikes by a score of 94 to 93, and won it finally in open competition at the Kansas City shoot on May 19. Gilbert won the Sportsmen's Review trophy, at Cincinnati, Nov. 4, Elliott capturing it from him on Dec. 12, by a score of 95 to 92. The E. C. cup was contested for on Aug. 13 at Watson's by Heikes and Gilbert, at 150 targets, the former winning by a score of 140 to 137. Heikes again won it in open competition at Dayton, Oct. 14. The Montgomery Ward & Co. handicap diamond badge has been warmly competed for in Chicago, as have been the Chicago challenge trophy. The Schmelzer trophy was won by Budd, Sept. 9, at Kansas City, in warm competition. Many matches have been shot between famous individuals. As to tournaments, there is no doubt but what the little tiff between Uncle Sam and Spain limited their numbers and their success. Nevertheless, many of them, great and small, have been held north and south, east and west, during the year and most of them were successful.

Live-bird shooting is showing a renewed strength and activity, in measure due no doubt to the general impetus given that branch of the sport by the Grand American Handicap and the great live-bird contests for the trophies.

There is every indication of a successful year forthcoming.

ON LONG ISLAND.

New Utrecht Gun Club.

Woodlawn, L. I., Dec. 17.—Harrison's shooting was a particular bright feature this afternoon with the conditions he had to contend with, a heavy rain beating right into the faces of the shooters. This shoot ends the club's contests for the yearly prizes at targets. Annual meeting of club will be held Dec. 28, 1898, at Robt. Supper's Avon Beach Hotel, Bath Beach. An elegant dinner will follow meeting.

Club shoot:

L Harrison	11111111111110111100111 11—22

JOHNNY JONES.

IN NEW JERSEY.

Hackensack River Gun Club.

Hoboken, N. J., Dec. 22.—The H. R. G. C. held a live-bird shoot Dec. 20 on its ground at Heflich's Hotel; 10 birds, 28yds. rise. It was won by Frank Hall, he being the only one with a clean score:

A heavy fog prevailed and required some quick work with the second barrel if it was to be used at all. The scores:

F Hall	1211121222—10	H Heflich	1111122011— 9
G Englebrecht	0120011201— 6	H Hutchison	1002022211— 7
G Van Thaden	2120011210— 7	L Stelzle	10122*0011— 6
P Schmidt	000211*210— 5	J Outwater	0100021210— 5
H Harms	1112021111— 9	J Chartrand	2111*11012— 8
H Pape	2112020010— 6	J Farley	0010200121— 5

This was followed by a match between R. Aschbach and H. Thourot for a supper for the entire party of shooters and the price of the birds. This was won by Aschbach, as these scores show:

R Aschbach	222102002012— 8	H Thourot	201021020022— 7

Darkness then prevented any more shooting.

JOHN L. CHARTRAND, Sec'y.

University of Pennsylvania Gun Club.

FERNWOOD, Pa., Dec. 17.—The following events were shot at unknown angles:

Team match.

Swain, captain	1111111010— 8	Steel, captain	0100110111— 6

Rifle Range and Gallery.

Rifle at the Sportsman's Association.

SING SING, N. Y.—*Editor Forest and Stream:* Now that the time for the annual sportsman's show has nearly arrived, I would like to set forth a few ideas which have occurred to me in connection with the shooting gallery as conducted in the basement of the Madison Square Garden during the great show. In the first place, to qualify for criticising this branch of the show, I consider myself a fair shot in rifle practice and game shooting. Being troubled with big head in this matter, I was rash enough to enter in some of the competitions. Aside from a chance shot in the bullseye event, my score was woefully lacking. My nerves were very steady, resulting from abstaining from the use of tobacco and all stimulants. I had practiced a great deal. Why was it my score did not reach the winning mark? Because I held my rifle by the fore end, as one is accustomed to do in shooting game. Any sportsman who will take the troube (I have no doubt many have noticed this besides myself) to visit the range will find game shooters far in the minority. You will find champion gallery shots of German Shooting Association, and in fact professional crack shots from all over the country, one and all, using the hip rest with 14lb. rifles, which would not shake if the man using it happened to be affected with St. Vitus' Dance. This is a sportsman's shoot. Why not make it so in every sense of the word. Give the sporting fraternity a chance by having at least one event open to those only who shoot off-hand?

I do not imagine I could take a place even then; but I would pass over my "coin" with a much more cheerful spirit when knowing that it was taken by one of steadier nerves and truer eye.

CHAS. G. BLANDFORD.

[Gallery shooting is not big-game shooting, nor is its manner of shooting held forth as being such. If one were to hold the rifle as Mr. Blandford suggests it would be far from the conditions of big-game shooting even at that.]

Shell Mound Range.

SAN FRANCISCO, Cal., Dec. 12.—Shell Mound range was patronized yesterday by scores of marksmen. Only one more shoot will be held this year—on next Sunday. Scores for the day were:

Columbia Pistol and Rifle Club.—Rifle, 10-shot score, Columbia target: Champion class, A. H. Pape 35; first class, O. A. Bremer 79; second class, M. J. White 108; G. M. Barley 109; third class; G. Mannell 93; E. N. Moor 107.

Members' rifle medal: E. N. Moor 83, O. A. Bremer 85, G. Mannell 85.

All-comers' rifle medal: A. H. Pape, 41, 46, 47; D. W. McLaughlin, 45; F. O. Young, 66.

Bushnell military rifle medal: F. E. Mason 45, F. O. Young 45.

Pistol, 50yds., Columbia target—Champion class: J. E. Gorman 48, M. J. White 51, F. O. Young 69; first class, G. M. Barley 56; second class, Mrs. M. J. White 65.

Siebe medal: G. M. Barley 41, 54, 61, 62, 65; C. M. Daiss, 40, 43; F. O. Young, 48, 53, 57; J. P. Cosgrave, 55, 57, 62, 70.

Rifle medal for .22 and .25cal.: E. P. Jacobson, 17, 19, 21, 22, 22; A. H. Pape, 24, 25; Mrs. G. Mannell, 33.

Germania Schuetzen Club, monthly medal shoot: First champion class, D. B. Faktor 439; second champion class, not won; first class, Henry Stelling, 402; second class, J. Gefken 393; third class, W. Goetze, 353; best first shot, Dr. L. Rodgers, 25; best last shot, Henry Stelling, 24.

Independent Rifles, monthly medal shoot: E. Jacobson 44, P. Schonig 39, C. Kornbeck 34, J. H. Kuhlke 31, H. Kuhlke 32, Lieut. J. Staude 31, H. Staude 24, G. Kellenberger 21.

Nord-Deutscher Schuetzen Club, monthly medal and annual turkey shoot: Champion class, not won; first class, final, Otto Lemceke 425; second class, John de Wit 373; third class, A. Meyer 331; fourth class, final, H. Munster, 280; best first shot, O. Lemcke, 21; best last shot, Henry Stelling, 20.

Turkey shoot: Otto Lemcke 68, H. Burfeind 66, H. Stelling 62, F. P. Schuster 66, W. Koch 58, John Gefken 56, L. Ritzau 59, John Schroeder 50, Albert Meyer 49, John Lankenau 46, F. Groverman 48, E. F. Baruth 42, L. Thierbach 49, John de Wit 48, F. Kaufman 47.

San Francisco Schuetzen Verein monthly medal shoot: Champion medal, D. B. Faktor 438; first class, Nick Ahrens, final, 403; second class, John Gefken 405; third class, John de Wit 396; fourth class, David Salfield, 389; best first shot, Otto Lemcke, 25; best last shot, Gustaf Schulz, 25.

Company B, 1st Regiment, N. G. C., being reorganized: E. Peppin 41, H. Hensley 40, J. R. Wear 39, J. Gilkyson 35, J. O'Keeffe 34.

ROEEL.

Answers to Correspondents.

No notice taken of anonymous communications.

A. B. G., Dublin, Texas.—We do not know who is the best breeder or who are the best breeders of Llewellin setters. Perhaps some of our readers could give information on the subject.

D. A. G., San Marcos, Texas.—We would advise you to consult your physician if there is no veterinarian in your town. The symptoms you mention are too meager for any diagnosis.

PUBLISHERS' DEPARTMENT.

THE Jos. Dixon Crucible Co., of Jersey City, manufacture a full line of pencils of all shapes, sizes, and colors, for all the different kinds of work for which pencils are used. Some which we tried of late proved to be of excellent quality.—*Adv.*

Yachting.

As the yachting journal of America, the FOREST AND STREAM is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.

OF late years the adherents of different systems of yacht measurement have been divided into two schools, including those who believe in a type of rule based primarily on a formula composed of different factors of speed in variable quantities, and those who believe in fixed and invariable limits for each class. The Massachusetts Y. R. A. and the owners of many of the smaller yachts in Boston waters have favored strongly the latter system, in the particular form of a measurement of waterline alone with the simplest possible restrictions in the way of crew limit, prohibition of shifting ballast and similar ones. As we have predicted at different times in the last few years, the course of racing in Boston waters has clearly demonstrated the failure of such means to secure the desired end, of encouraging the all-round type of yacht long in use there. The general consensus of opinion in the Association is now in favor of more stringent regulations of some sort, and we publish elsewhere the first attempt in this direction. As will be seen, the waterline is retained as the basis of measurement and classification, but definite limits are placed on sail area and ballast. While the exact method employed is different from those advocated by our correspondents Sextant and Mr. George Hill, the restrictions are of the same type, and widely different from such formulas as we have discussed at times. We fail to see as yet the advantages of this new scheme over any good formula, and we shall watch the experiment with much interest. We hope that Boston yachtsmen will build to the new limitations and test them thoroughly.

THE detail of measuring the head triangle has always been attended with no small amount of difficulty and confusion, as shown in the small classes racing for the Seawanhaka cup, the method of measurement being changed nearly every year, and always being unsatisfactory. The method proposed for the knockabout classes seems to be a distinct improvement on anything yet tried, in that the three limiting points are absolutely fixed, and such as can be located quickly and certainly. They are at the deck at fore side of mast, the intersection of the line of foremost headsail with the bowsprit or deck; and the intersection of the same line with the fore side of mast. These are the measurements by the British Y. R. A. rule, but to adapt them to the present case it is proposed to include only a certain portion of this triangle in the sail as measured. This is very much better than measuring the perpendicular to the head of jib on the stay, and attempting to mark the latter point.

THE determination of the Sound Y. R. A. to allow 1,000sq. ft. of sail for the proposed 25ft. knockabout class makes the name a misnomer before the class comes into existence. This is the same sail plan as that of the special 30ft. class, with 5ft. more length, and about 1ft. less beam and 1ft. more draft; while the boats are racers and in no sense knockabouts. There will be no difficulty in designing a yacht of 25ft. l.w.l. to carry 1,000sq. ft. of sail; but such a boat will be anything but a knockabout in the true sense of the term, or capable of the use for which the class was created.

A RECENT letter from Singapore informs us that the series of articles on Dominion published in the FOREST AND STREAM last fall has been read and appreciated on the other side of the globe, while we have heard commendatory reports from many other places nearer home. The articles and designs have been copied by all the yachting journals of the world; the principal ones, such as the Yachtsman, the Yachting World, Le Yacht and Wassersport, reprinting them very fully and with favorable comments. All our foreign contemporaries have paid us the compliment of crediting the matter to its original source.

The Y. R. A. of Long Island Sound.

THE final meeting of the Yacht Racing Association of Long Island Sound for the adoption of the proposed new regulations was held on Dec. 20 at the Windsor Hotel, New York. As already stated, a special general meeting for the same purpose was held on Dec. 12, those present being: E. Burton Hart, Jr., Huguenot Y. C.; E. M. MacLellan, Douglaston Y. C.; Ward Dickson, Hempstead Harbor Y. C.; H. H. Gordon, Huntington Y. C.; Frank Bowne Jones, Indian Harbor Y. C.; E. B. Meyrowitz, New Rochelle Y. C.; Harry Stephenson, Knickerbocker Y. C.; Oscar Chellborg, Corinthian Fleet of New Rochelle; George P. Clark and Charles T. Pierce, Riverside Y. C.; Joseph M. Price and Frank Towle, Horseshoe Harbor Y. C.; W. P. Stephens, Corinthian Fleet; Charles P. Tower, New Rochelle Y. C.; J. C. Seward, Sachem's Head Y. C.

The meeting was open to all members of the Association, but only sixteen turned out. The night was stormy and unpleasant for yachtsmen, the snow falling steadily all the evening. The numerous details of the proposed classification, measurement, cabin restrictions, scantling table, etc., were discussed at length after the report published in our issue of Dec. 17 had been read and adopted. Some of the proposals were adopted, but owing to the small number present it was suggested that action on the cabin limitations, knockabout restrictions and scantling table be deferred until the proposed rules had been printed and sent to the clubs. After some debate, the motion being opposed on the ground that it was highly desirable to settle everything without further delay, it was decided to call another meeting on Dec. 20 for final action. The weather on Dec. 20 was no miprovement on that of the former meeting, a thick fog enveloped the city and made travel uncertain on the ferries, while there was a suggestion of la grippe in every breath. Those present were C. T. Pierce, E. P. Tower, E. Burton Hart, O. H. Chellborg, H. Stevenson, F. B. Jones, W. I. Zerega, C. H. Crane, George B. Clark, W. P. Stephens, Ward Dickson,

H. H. Gordon, C. E. McManus, E. M. MacLellan, club representatives; L. D. Huntington, Jr., T. F. Day and C. G. Davis, members, and N. D. Lawton, of the Atlantic Y. C., by invitation.

The various proposals as published were taken up, the definition of a cabin yacht being adopted after some minor amendments were made. The knockabout restrictions were also adopted with a few changes. On the motion of C. H. Crane the method of measuring the head triangle was changed, the limiting points of the triangle being located at the intersection of mast and deck, the intersection of the mast and line of jib stay, and of bow or bowsprit with the line of jibstay. As this triangle would be considerably larger than the one now measured, it was provided that only a certain percentage of it should be taken in calculating the area of sail; 87 per cent. being provisionally suggested; but it was left to the executive committee to determine from actual sail plans a fair percentage.

The question of the allowance of sail for a 25ft. knockabout created quite a spirited discussion. The committee had recommended 900sq. ft., an increase of 50sq. ft. over the proportion of 600sq. ft. to 21sq. ft. l.w.l., the same proportion to l.w.l. as in the 21ft. class, but Mr. Crane moved to increase this to 1,000sq. ft.; which was finally carried. Mr. Jones then proposed to increase the sail area of the 21ft. knockabout to the same proportion, of 700sq. ft. instead of 600. This proposal was discussed for some time, but was not adopted.

The proposed table of scantling was then taken up, and a motion made to adopt it; but Mr. Davis stated that he had found the table to be incorrect, and that he had prepared a better table, but had not brought it with him. Another discussion arose, some urging that the proposed table be adopted, as further delay was very undesirable, as yachtsmen were waiting for a final settlement of the rules and it would entail more meetings and added work for the committee. It was finally decided that in view of the importance of the matter the executive committee should meet with Mr. Davis, and afterward should adopt such figures as it thought fit. The meeting adjourned at midnight. The executive committee has received from the race committee of the Seawanhaka C. Y. C. three protests, which the race committee has not been able to decide satisfactorily. It is probable that these will not be taken up until the changes of the rules are entirely completed. We shall publish the complete text of the rules as soon as the changes are completed and the secretary is able to compile an authorized copy; so many changes have been made from the original proposals that it is impossible now to correct the latter.

Josephine II.

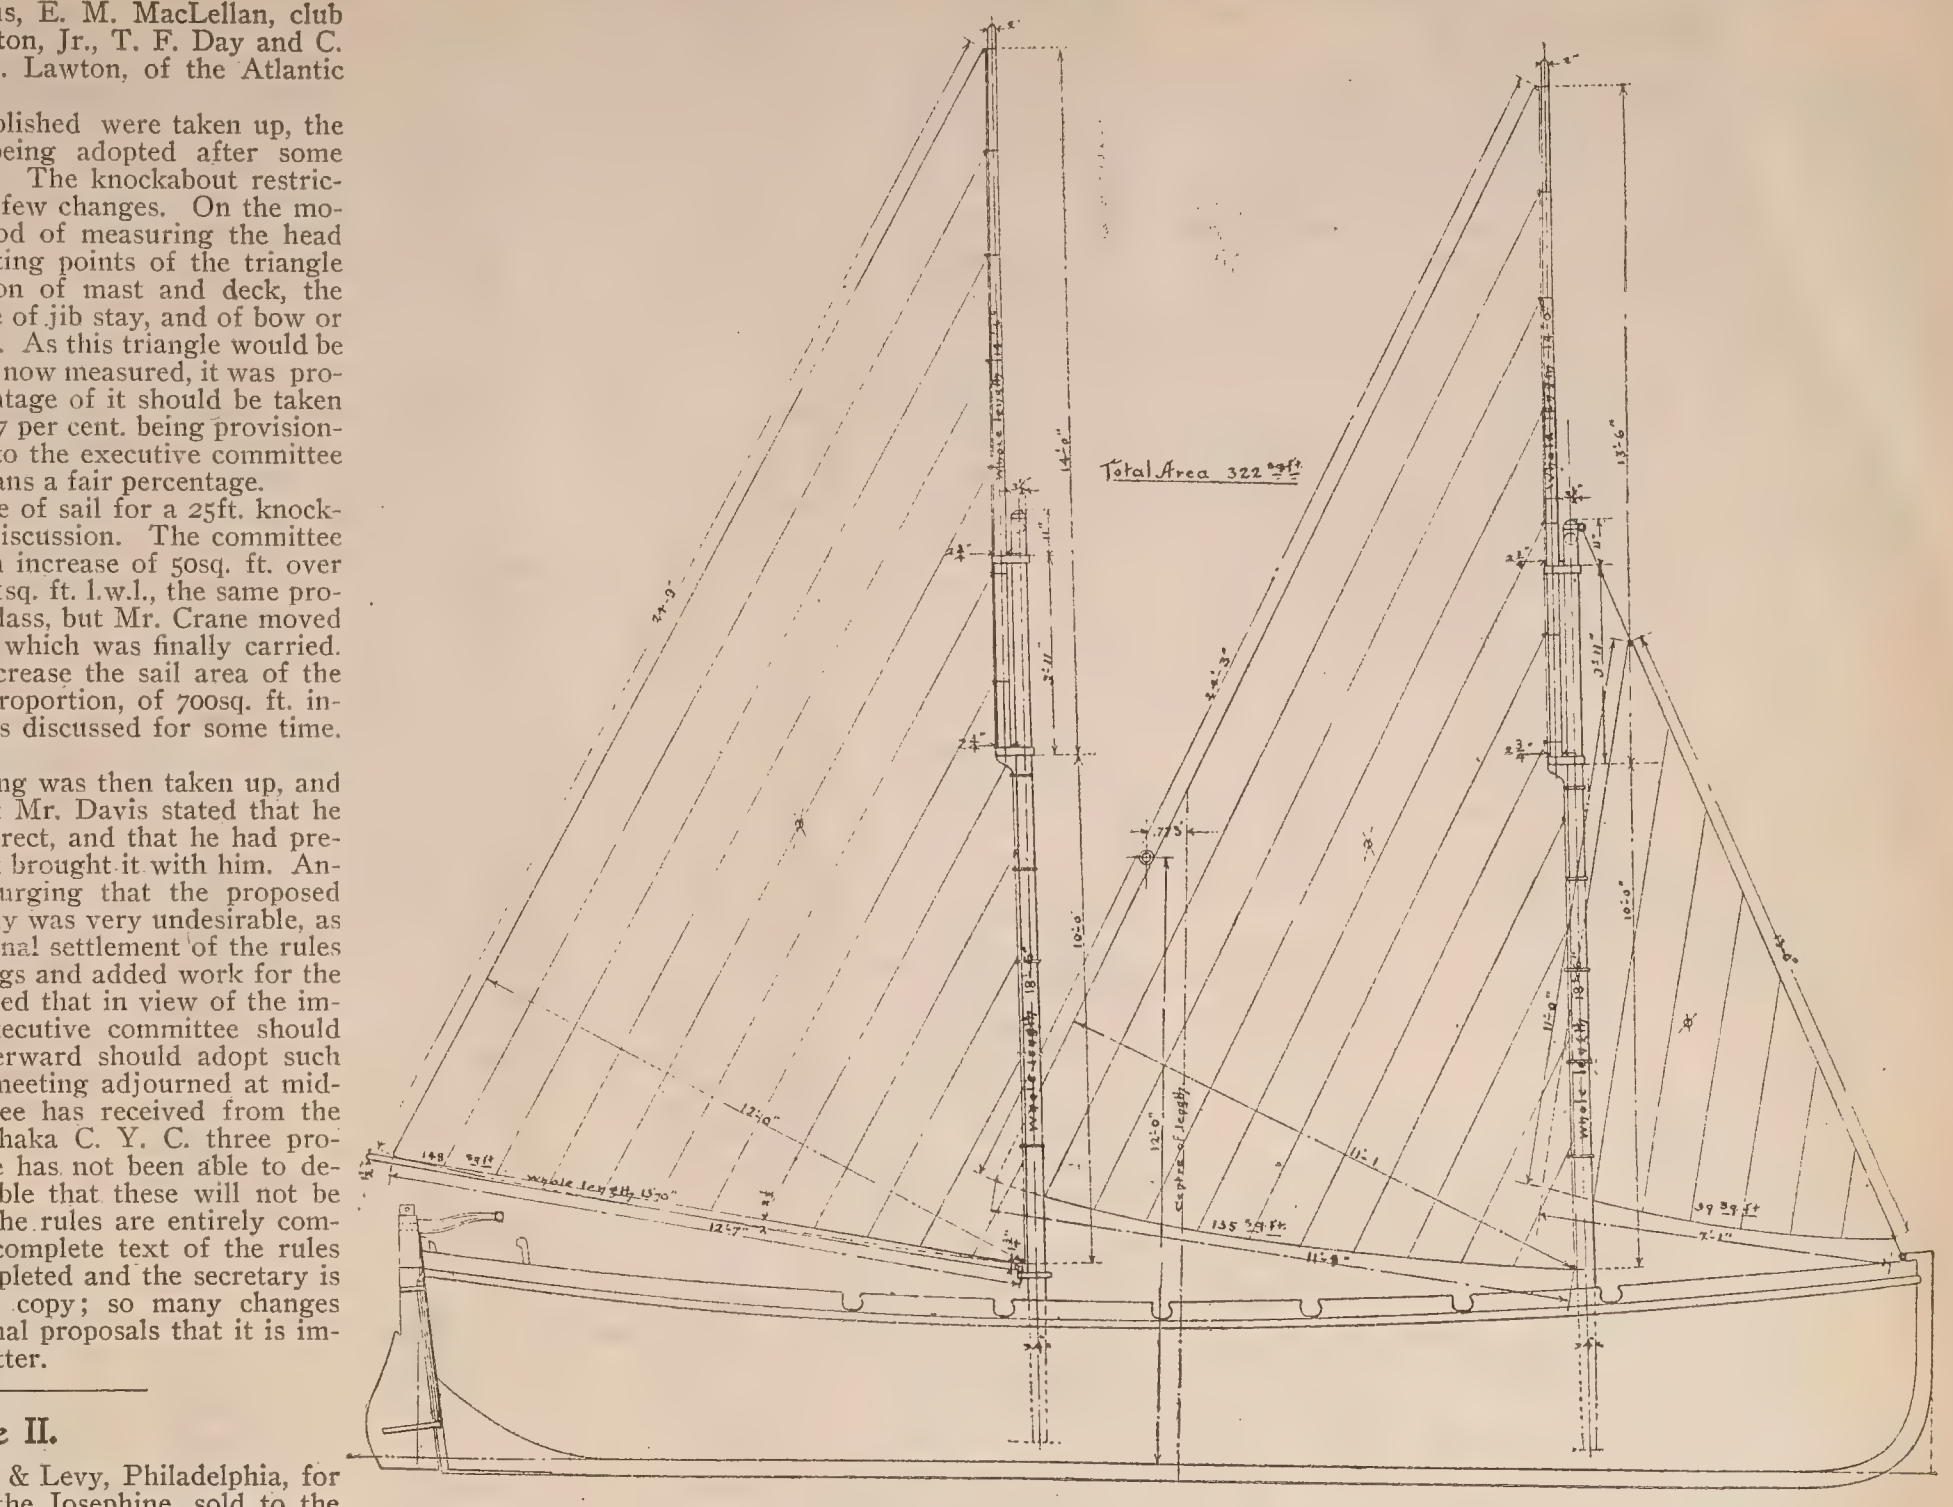
THE yacht building by Neafie & Levy, Philadelphia, for P. A. B. Widener, to replace the Josephine, sold to the Government last spring, and renamed Vixen, is described as follows by the Philadelphia Item. The name of the designer is not stated:

The new Josephine will be largely superior to her predecessor. She will be built to the requirements of the United States inspection, and to the British Lloyds survey and inspection for class A1.

Her length over all will be 257ft., on the waterline 216ft., and 30ft. 3in. beam. The depth from base line to main deck beams will be 13ft. 6in., and from base line to top of awning deck beams 26ft. 6in. The yacht will be fitted with two masts, and be schooner rigged.

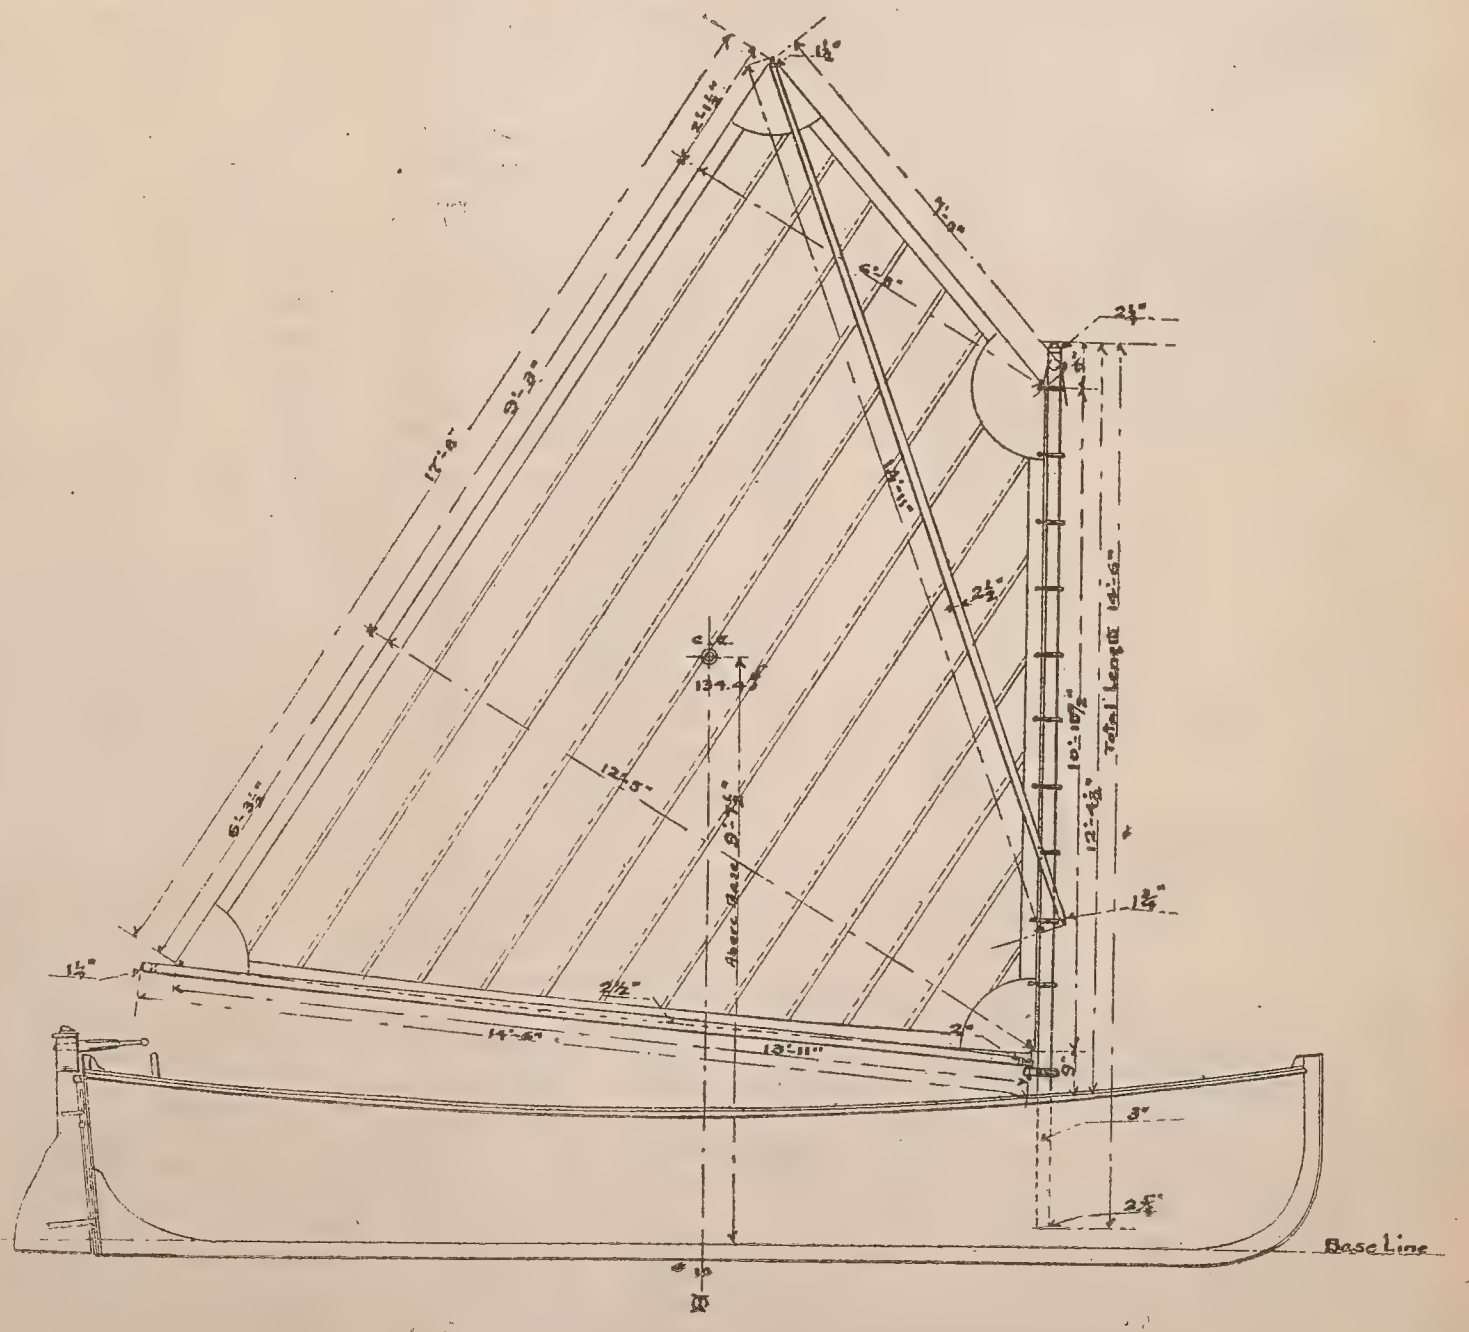
The bridge extends across the boat, with wheel, compasses and chart table. Under the bridge will be the chart room, and aft the captain's room, extending the width of the house, 12ft. Next aft on the upper deck will be the library, 26 by 12ft. Over this apartment will be an elliptical skylight for ventilation, and a dome. The engine room skylight will be aft of the library, and the remainder of the upper deck will be given up to a promenade 145ft. in length.

At the forward end of the space under the bridge will be the owner's rooms, two communicating apartments, each 19 by 15ft. Aft of each will be a bath room. Between the bath rooms a stairway will extend to four lower guests' rooms. From the stairs a passageway will lead to the dining room, whose dimensions will be 30ft. 3in. by 16ft. This saloon, which will be finished in African mahogany, paneled on the sides with ornamental capitals and pilasters, with a lincrusta walton ceiling, will have, in addition to the ports, skylights on each side for ventilation.



Aft on the starboard side will be the reception room, 29 by 9½ft., extending half the yacht's width and over the engine room. It will be finished in antique oak, panneled. On the other side of the engine room will be plate glass, to view the machinery in operation. Aft the reception room on the starboard side will be a passageway between the ladies' room built in the deckhouse and the ship's rail. On the port side of the passageway the ladies' room will extend out to the side of the ship. Above and on the starboard side will be an elliptical skylight.

At the after end of the ladies' room will be a mahogany staircase leading to the owner's quarters below. Forward and at the foot of the stairs two large staterooms will extend across the yacht. Aft on the starboard side there will be a stateroom with two berths. Further aft will be three more staterooms. Then come the owner's bath rooms and maids' quarters, the latter containing four berths and extending across the yacht.



Forward of the foremast, on a drop of 2ft., will be the crew's airing space. Under this deck is the crew's gallery, mess room and pantry. On the deck below is the crew's forecastle and quartermaster's room. Aft are trunk and storage rooms.

The machinery will consist of a quadruple expansion engine, with cylinder 19½, 28, 39, and 57in. in diameter, and 36in. stroke. Steam will be supplied by two boilers of the Scotch type, with artificial draft, built for 200lbs. of steam, each boiler to be 14½ft. in diameter and 11ft. long. Each will contain four corrugated furnaces. Air, circulating, feed and other pumps will be independent of the main engine. The power will be sufficient to drive the yacht at least seventeen knots per hour in ordinary weather. The coal bunker capacity will be 240 tons.

The yacht will have a water bottom the entire length. Captain S. G. Chase, who commanded the former Josephine, will, with Mr. Widener, superintend the construction of the new yacht and command her when completed.

SAIL PLAN 30FT. CUTTER, GUNTER RIG.

SAIL PLAN 20FT. DINGHY, SPRIT RIG.

The Yacht Racing Association of Massachusetts.

As the result of a good deal of labor during the past two months, the Y. R. A. has adopted the following new regulations. The ends aimed at are the same as in New York, the restriction of extremes of design, construction and arrangement in the interests of the majority of yacht owners who wish to race in yachts suitable for general service. The feeling on the part of a majority of the small yacht owners about Boston has been strongly against all formulas and especially against the use of sail as a factor, the measurement of the Y. R. A. since its organization being waterline alone. In the new regulations an attempt is made to place values on other factors of advantage, the beam, ballast and sail area, by means of special new formulas, as given below. These formulas are merely auxiliary to the actual measurement rule, which is still the waterline only. By this method, which is at least a novelty in measurement legislation, a yacht of a given waterline is allowed to carry sail in direct ratio to her beam, while she must also carry a minimum weight of ballast, in inverse ratio to her beam. The full text of the new rules, as officially published, is as follows:

In pursuance of the vote of the Y. R. A. of M., creating cabin classes for 21, 25 and 30ft. yachts, and instructions to the executive committee to establish such limitations as would encourage the building of good cruising yachts in preference to racing machines, the committee have adopted the following limitations, realizing that the open classes still exist for those who desire to build for speed alone.

The committee have endeavored to frame such limitations as will encourage racing among yachtsmen who wish to race yachts in which all good qualities are not sacrificed for speed, and for the protection of the classes.

EXECUTIVE COMMITTEE.

Boston, Dec. 15, 1898.

Definition of Cabin Yacht.

A cabin yacht is intended to be a seaworthy type of cruising and racing yacht, substantially constructed, properly ballasted, and with moderate sail plan, either flush deck, or with cabin trunk on deck, having suitable cabin accommodations below, and conforming to the limitations herein mentioned.

Freeboard.—The least freeboard, measured from the top of covering board to the surface of the water, shall be not less than as follows:

	21ft.	25ft.	30ft.	35ft.
Length				
Beam of or less than	7ft.	8ft.	10ft.	12ft.
Freeboard, minimum	21in.	24in.	28in.	32in.

Less 1in. for every foot of additional L.W.L. beam.

Cabin Trunk.—The height of the cabin trunk shall not exceed 2in. for every foot of greatest L.W.L. beam, measured from the level of top side of covering board to highest point of top side of cabin trunk.

Cockpit.—The cockpit floor shall be above the L.W.L. with scuppers draining outboard.

Cabin Floor.—The cabin floor shall be on timbers, in width not less than one-quarter the greatest L.W.L. beam, and in length not less than the following:

	21ft.	25ft.	30ft.	35ft.
Length				
Cabin floor, length, minimum	7ft.	10ft.	12ft.	15ft.

Headroom.—The minimum headroom in the clear, under deck or cabin trunk beams, over the entire required cabin floor, exclusive of skylights and hatches, shall be as follows:

	ft. in.	ft.in.	ft.in.	ft.in.
Length	21	25	30	35
Headroom, minimum	3 9	4 6	5 6	6 0

Scantlings.

Minimum dimensions and areas	21ft.	25ft.	30ft.
Expressed in Inches.			
A.—Stem sided at head	3	3½	4
B.—Sternpost, sided at tuck	3¼	3¾	4
C.—Keel, minimum thickness	3	3½	4½
Sectional area	36	45	54
D.—Frames, sectional area—heels	2¾	3½	4¼
Bilge	2¼	3	3½
Heads	1¼	1¾	2¼
Spacing	10	11	12
E.—Floors, sectional area	5	7	9
Spacing	18	20	22
F.—Shelf or clamp, sectional area:			
Middle	4½	6	7½
Ends	3	4½	5½
G.—Bilge stringers, sectional area:			
Middle	3	4	4½
Ends	2	3	3¾
H.—Deck beams, sectional area, main	4½	5½	6½
Auxiliary	2¾	3¾	4¼
Half-beams	1¾	2¼	2¾
Spacing	10	11	12
I.—Planking, to finish full	⅞	1	1⅛
Hood ends (above L.W.L.)	¾	⅞	1
J.—*Deck and cabin trunk top to finish full	⅞	1	1⅛

* A reduction of ⅛in. allowed on deck planking if canvas-covered.

The keel, stem, frames, trunk and deck beams shall be of oak, or its equivalent in strength.

A (stem).—The minimum siding (thickness) measured at the rabbet at highest point on stemhead, no decrease of siding allowed.

B (sternpost).—Minimum siding at tuck (the crossing of the rabbet). The siding may diminish from tuck to heel. The rudder stock, if of wood, to be equal in diameter to the siding of post.

C (keel).—Minimum depth allowed for middle. The minimum of sectional area (breadth multiplied by depth in the middle of keel) may be made up, if desired, by a deeper keel. The breadth of keel will taper from point of greatest section to siding of stem and sternpost.

D (frames).—The sizes laid down in the table show the minimum sectional area of frames (the siding multiplied by the moulding) at three points—the heel of frame where it is boxed into the keel, the middle of frame about the flat of the floor and turn of bilge, and the head at plank sheer. The sectional area is that of a single frame for a uniform spacing of 1ft. in each class. This required area may be made up of smaller frames spaced closer together, or larger frames further apart; or of combinations of large and small frames with appropriate spacings. This minimum sectional area shall apply to a space of at least two-thirds of the L.W.L. length in the center of the vessel; forward and aft of this the sectional area may be reduced 20 per cent.

Two adjoining frames abreast each mast and one at each runnerplate should be increased in size in proportion as they are cut by the chainplate fastenings.

Where bent frames are used in combination with sawn the bent frames may be of uniform scantling from end to end; but the sawn frames must be large enough to make up the required average sectional area at the heels where they are cut by the fastenings of floors.

Spacing of Frames.—The maximum spacing of frames as given in the table is based not on the size of frames, this being variable, but on the thickness of planking allowed for the class; being the greatest spacing that will insure a tight seam with the usual caulking for the minimum thickness of planking allowed.

E (floors).—There shall be at least six strong floors in the center of the vessel in way of the metal keel, and two at each mast step.

F (shelf or clamp).—The minimum sectional area given for the middle shall cover a length of at least one-half of the shelf (or clamp) and in the middle, a taper being allowed to the size given at each end. The ends of deck beams may be jogged into top of shelf a distance not exceeding one-third of their own depth. If a beam clamp is used, fitted close up to the plank sheer, the beams being thus jogged in for their full depth, the sectional area shall be increased in proportion.

G (bilge stringer).—The minimum sectional area at middle shall cover at least one-half the full length of bilge stringer, with taper allowed at the ends. At least one bilge stringer must be run on each side, at about the lower part of turn of bilge. In yachts whose extreme beam exceeds twice the greatest depth from under side of deck to upper side of keel, two such stringers on each side should always be fitted.

H (deck beams).—The minimum section area of deck beams shall cover at least the middle third of the beam, allowing a taper, in the moulding, to each end. There must be one main beam at the bitts, two at each mast (partner beams), one at fore end of cabin trunk, one at after end, two at each skylight, hatch and companion in flush-decked vessels, and one at transom. The auxiliary beams and the half-beams abreast of house, skylights, etc., may be of the smaller areas given for each. The beams may be spaced at will, provided the maximum distance between centers does not exceed that given in the table, which is based upon the thickness of deck planking. The beams should be jogged into the shelf of clamp a distance equal to one-third of the moulded depth of beam at ends.

I (planking).—The dimensions given in the table are the minimum thickness allowed, after final planing, over a distance in the middle of the vessel equal to at least one-half of the over-all length.

J (decking).—The thickness given for the deck plank applies also to the plank sheer (covering board) and the partner planks. The ends of the deck plank should be well supported, and in no case should they be wrought to a shim edge, which will crush down in caulking.

Sail Area.—The sail area shall not exceed the product of the L.W.L. length, multiplied by L.W.L. beam, multiplied by 4½, viz.: LxBx4½.

Dimensions expressed in feet.

	21ft.	25ft.	30ft.
Length			
Sail area, maximum (sq. ft.)	950	1,200	1,800

To the actual *area of all sails allowed in Rule XI., facing rules, except headsails and spinnaker, shall be added the area of the forward triangle, measured as follows:

* Sailmaker's certificates of areas required and the actual number of square feet should be marked on all sails.

The forward triangle shall be one-half of the base, multiplied by the perpendicular.

The base line shall be the distance from a point on the forward side of the mast 18in. above the deck, to the point of attachment of the outer head sail to the bowsprit or stem.

The perpendicular shall be the distance from the upper side of the sheaves of the uppermost halliard block on the mast to a point on the forward side of the mast 18in. above the deck.

If any sail extends forward of the limits of this triangle, the excess shall be measured.

Spinnaker Boom.—The distance from the outer end of the spinnaker boom to the rail, when in position for use, shall not exceed the L.W.L. length.

Ballast.—The amount of ballast, exclusive of weight in centerboard, shall be not less than the product of the square of the length minus the beam, multiplied by six times the L.W.L. length, divided by the beam, viz.:

$$(L-B)^2 \times 6\frac{L}{B}.$$

Weights expressed in pounds.

	21ft.	25ft.	30ft.
Length			
Ballast, maximum required	3,500	5,000	7,000
Ballast, minimum allowed	1,250	2,000	3,000

All ballast must be below the floor of cabin or cockpit.

Fixtures.—There shall be a substantial partition at the after end of cabin, and two permanent lockers, and suitable berths or transoms for the accommodation of the crew.

Fittings.—The cabin shall contain cushions or mattresses for the berths or transoms, and one blanket for each berth, or 7ft. length of transom, stove and cooking utensils, and receptable for two gallons of water. There shall also be on board anchor weighing not less than 1½lbs. for every foot of L.W.L. length, and not less than one fathom of suitable cable for every foot of L.W.L. length, life preservers, compass, riding light, foghorn, bucket and boat hook.

All fittings and fixtures herein mentioned shall be suitable for cruising purposes, and shall not be removed, or substituted by articles smaller or of lighter weight.

Existing Yachts.—Any yacht built prior to the adoption of these limitations, having smaller sail plan and less ballast, or fails to meet the requirements on construction, freeboard, headroom, cabin trunk or floor or cockpit, may race in her former class, provided she complies substantially with the intent of these limitations.

Alterations made on existing yachts must conform to these limitations.

Exceptions.—A yacht overrunning the limit of her class by not more than 1ft. may enter the class above provided she conforms to all the other limitations of the class for which she was built.

Note.—"L.W.L." is measured with crew, racing truck, cruising equipment, etc., on board.

Schooners and Yawls.

Schooners and yawls to be entitled to the allowance for rig, mentioned in Rule VIII., racing rules, must conform to the following:

A schooner shall not have mainmast forward of center of L.W.L., and foremast not forward of the point of immersion forward.

A yawl shall not have mizenmast further aft from after point of immersion than 15 per cent. of the L.W.L. length, and mainmast not forward of point of immersion forward.

In cabin classes all limitations shall be based on actual dimensions.

Examples of Sail Area.

$L \times B \times 4\frac{1}{2}$.

21-Foot Class.

7 beam	660sq. ft.
8 beam	756sq. ft.
9 beam	850sq. ft.
10 beam	945sq. ft.
11 beam	950sq. ft.

25-Foot Class.

8 beam	900sq. ft.
9 beam	1,012sq. ft.
10 beam	1,125sq. ft.
11 beam	1,200sq. ft.

30-Foot Class.

10 beam	1,350sq. ft.
11 beam	1,485sq. ft.
12 beam	1,620sq. ft.
13 beam	1,755sq. ft.
14 beam	1,800sq. ft.

Examples of Ballast.

$(L-B)^2 \times 6\frac{L}{B}$.

21-Foot Class.

7 beam	3,500lbs.
8 beam	2,661lbs.
9 beam	2,064lbs.
10 beam	1,526lbs.
11 beam	1,250lbs.

25-Foot Class.

8 beam	5,000lbs.
9 beam	4,266lbs.
10 beam	3,375lbs.
11 beam	2,072lbs.
12 beam	2,000lbs.

30-Foot Class.

10 beam	7,000lbs.
11 beam	5,907lbs.
12 beam	4,860lbs.
13 beam	4,001lbs.
14 beam	3,000lbs.

Yacht Designing.

In spite of the favor with which the series of articles on practical designing was received by our readers, the pressure of much other work has prevented their resumption during the past year, as was originally intended. We take pleasure now in announcing that they will begin again in the issue of next week, and will continue as regularly as the work will permit. It is the intention to issue them in book form after completion in the paper. The portion of the subject which will be first taken up relates to drafting instruments, their practical use, and the elements of marine drafting.

YACHTING NEWS NOTES.

The Marblehead Yacht Yard (W. B. Stearns) is already busy with a number of yachts of various sizes. Com. H. C. Rouse, Seawanhaka C. Y. C., has ordered for himself and a friend, for use about Gloucester, two sloops of 25ft. l.w.l., 28ft. over all, 8ft. 6in. beam, 5ft. 6in. draft; with 5,000lbs. of lead on keel and 750sq. ft. of sail. The two will be exactly alike; they are intended for fast sailing and cruising. Messrs. Herman J. and Telford Groesbeck, of Cincinnati, have ordered two cruising yachts, each of 30ft. l.w.l., 44ft. over all, 12ft. 6in. beam, 5ft. draft of hull, with Tobin bronze board of 250lbs. housing below floor, the extreme draft being 9ft. The sail area will be 1,300sq. ft., solely for cruising, and the lead keel will weigh 12,000lbs. The yachts will be roomy and very elaborately finished. There is a wide floor in the cabin, with wing berths 27in. wide, the transoms extending to 3ft. Clothes lockers aft and a sideboard on each side forward will give space for the personal equipment of the owner. Copper tanks for fresh water are placed under the transoms, and on the port side forward is a roomy lavatory, with Bishop w. c., wash basin, pump, mirrors, linen lockers, etc. In the forecastle are berths for crew, large ice box, stove, lockers, etc. The cabin and lavatory are finished in mahogany in the natural color, without stain, but filled with five or six coats of varnish rubbed to a dead polish. Special bronze deck fittings will include an Enos Sheet Molder Company's winch forward and a winch for centerboard. The rig will be pole mast, with single jib. In the 21-footers is a boat for the handicap knockabout class, for the Cropley Bros., of Marblehead, a real fast cruiser, with accommodation for short cruises in a very attractive cabin. Two stock boats of this size are nearly finished, one similar to this one, and the other of the Cohasset type, with centerboard, but of more expensive finish than the one-design boats.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.
